Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:

Date form received by agency: 02/24/2010

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 07/08/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2013	Source: EPA

Date Made Active in Reports: 01/28/2014	Last EDR Contact: 07/08/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 08/28/2014
Number of Days to Update: 94	Next Scheduled EDR Contact: 12/08/2014
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/01/2014	Source: Environmental Protection Agency

Number of Days to Update: 45	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/11/2014
Date Data Arrived at EDR: 03/13/2014
Date Made Active in Reports: 04/09/2014

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 03/19/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 703-603-0695
Date Made Active in Reports: 07/15/2014	Last EDR Contact: 09/08/2014
Number of Days to Update: 116	Next Scheduled EDR Contact: 12/22/2014
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/19/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 703-603-0695
Date Made Active in Reports: 07/15/2014	Last EDR Contact: 09/08/2014
Number of Days to Update: 116	Next Scheduled EDR Contact: 12/22/2014
	Data Release Frequency: Varies

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/28/2014	Source: Department of the Navy
Date Data Arrived at EDR: 05/30/2014	Telephone: 843-820-7326
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 08/14/2014
Number of Days to Update: 18	Next Scheduled EDR Contact: 12/01/2014
	Data Release Frequency: Varies

Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/30/2013	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 10/01/2013	Telephone: 202-267-2180
Date Made Active in Reports: 12/06/2013	Last EDR Contact: 07/03/2014
Number of Days to Update: 66	Next Scheduled EDR Contact: 07/14/2014
	Data Release Frequency: Annually

State- and tribal - equivalent NPL

HSL: Hazardous Sites List

The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

Date of Government Version: 02/26/2014	Source: Department of Ecology
Date Data Arrived at EDR: 03/21/2014	Telephone: 360-407-7200
Date Made Active in Reports: 04/22/2014	Last EDR Contact: 09/09/2014
Number of Days to Update: 32	Next Scheduled EDR Contact: 12/22/2014
	Data Release Frequency: Semi-Annually

State- and tribal - equivalent CERCLIS

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

CSCSL: Confirmed and Suspected Contaminated Sites List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 07/21/2014	Source: Department of Ecology
Date Data Arrived at EDR: 07/22/2014	Telephone: 360-407-7200
Date Made Active in Reports: 08/27/2014	Last EDR Contact: 07/22/2014
Number of Days to Update: 36	Next Scheduled EDR Contact: 11/03/2014
	Data Release Frequency: Semi-Annually

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: Solid Waste Facility Database

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 09/25/2013	Source: Department of Ecology
Date Data Arrived at EDR: 09/25/2013	Telephone: 360-407-6132
Date Made Active in Reports: 10/16/2013	Last EDR Contact: 09/08/2014
Number of Days to Update: 21	Next Scheduled EDR Contact: 12/22/2014
	Data Release Frequency: Annually

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tanks Site List

Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

Date of Government Version: 08/18/2014	Source: Department of Ecology
Date Data Arrived at EDR: 08/22/2014	Telephone: 360-407-7183
Date Made Active in Reports: 08/29/2014	Last EDR Contact: 08/22/2014
Number of Days to Update: 7	Next Scheduled EDR Contact: 12/01/2014
	Data Release Frequency: Quarterly

INDIAN LUST R9: Leaking Underground Storage Tanks on Indian Land

LUSTs on Indian land in Arizona, California, New Mexico and Nevada

Date of Government Version: 03/01/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2013	Telephone: 415-972-3372
Date Made Active in Reports: 04/12/2013	Last EDR Contact: 07/22/2014
Number of Days to Update: 42	Next Scheduled EDR Contact: 11/10/2014
	Data Release Frequency: Quarterly

INDIAN LUST R7: Leaking Underground Storage Tanks on Indian Land

LUSTs on Indian land in Iowa, Kansas, and Nebraska

Date of Government Version: 04/28/2014	Source: EPA Region 7
Date Data Arrived at EDR: 05/01/2014	Telephone: 913-551-7003
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 04/28/2014
Number of Days to Update: 47	Next Scheduled EDR Contact: 11/10/2014
	Data Release Frequency: Varies

INDIAN LUST R10: Leaking Underground Storage Tanks on Indian Land

LUSTs on Indian land in Alaska, Idaho, Oregon and Washington.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 05/20/2014	Source: EPA Region 10
Date Data Arrived at EDR: 06/10/2014	Telephone: 206-553-2857

State and tribal Brownfields sites

BROWNFIELDS: Brownfields Sites Listing

A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

Date of Government Version: 07/21/2014	Source: Department of Ecology
Date Data Arrived at EDR: 07/22/2014	Telephone: 360-725-4030

Number of Days to Update: 36	Next Scheduled EDR Contact: 11/03/2014
	Data Release Frequency: Varies

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995
Date Data Arrived at EDR: 07/03/1995
Date Made Active in Reports: 08/07/1995

Last EDR Contact: 06/02/2008
Next Scheduled EDR Contact: 09/01/2008
Data Release Frequency: No Update Planned

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

TACOMA/PIERCE COUNTY:

Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013
Date Made Active in Reports: 10/03/2013

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Daycare Center Listing

Source: Department of Social & Health Services
Telephone: 253-383-1735

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Location Relative to TP: 1/8 - 1/4 Mile WSW
Site Name: BELLEVUE PLATING CO INC
Site EPA ID Number: WAD078194107
Groundwater Flow Direction: NOT AVAILABLE
Inferred Depth to Water: 15 feet to 25 feet
Hydraulic Connection: The uppermost water-bearing strata is a glacial drift composed of sands, gravel, and clay with lenses of consolidated till.
Sole Source Aquifer: No information about a sole source aquifer is available
Data Quality: Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>

E19	1/2 - 1 Mile ENE	ENE
23	1/2 - 1 Mile SE	NW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Everett

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	16 inches	gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6.5 Min: 5.1
2	16 inches	31 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 141 Min: 42	Max: 6.5 Min: 5.1
3	31 inches	59 inches	very gravelly coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 705 Min: 141	Max: 6.5 Min: 5.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Alderwood

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 84 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 42 Min: 14	Max: 6 Min: 5.1
2	11 inches	26 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 42 Min: 14	Max: 6 Min: 5.1
3	26 inches	59 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6 Min: 5.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 3

Soil Component Name: Indianola

Soil Surface Texture: loamy fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches	loamy fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6.5 Min: 6.1
2	5 inches	29 inches	loamy fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 6.5 Min: 6.1
3	29 inches	59 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 705 Min: 141	Max: 6.5 Min: 6.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Wells

Source: Department of Health

Telephone: 360-236-3148

Group A and B well locations.

Water Well Listing

Source: Public Utility District

Telephone: 206-779-7656

A listing of water well locations in Kitsap County.

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Listing

Source: Department of Natural Resources

Telephone: 360-902-1450

Locations that represent oil and gas test well sites in Washington State from 1890 to present.

RADON

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by EHS International, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

EHS International, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Most Recent Revision:	1982

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> KING, WA	FEMA Flood <u>Electronic Data</u> YES - refer to the Overview Map and Detail Map

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> KIRKLAND	NWI Electronic <u>Data Coverage</u> YES - refer to the Overview Map and Detail Map
--	--

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/8 - 1/4 Mile WSW
Site Name:	BELLEVUE PLATING CO INC
Site EPA ID Number:	WAD078194107
Groundwater Flow Direction:	NOT AVAILABLE
Inferred Depth to Water:	15 feet to 25 feet
Hydraulic Connection:	The uppermost water-bearing strata is a glacial drift composed of sands, gravel, and clay with lenses of consolidated till.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>

E18	1/2 - 1 Mile ENE	SE
E19	1/2 - 1 Mile ENE	ENE
23	1/2 - 1 Mile SE	NW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Everett

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	16 inches	gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6.5 Min: 5.1
2	16 inches	31 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 141 Min: 42	Max: 6.5 Min: 5.1
3	31 inches	59 inches	very gravelly coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 705 Min: 141	Max: 6.5 Min: 5.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Alderwood

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 84 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 42 Min: 14	Max: 6 Min: 5.1
2	11 inches	26 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 42 Min: 14	Max: 6 Min: 5.1
3	26 inches	59 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 0.42 Min: 0.01	Max: 6 Min: 5.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 3

Soil Component Name: Indianola

Soil Surface Texture: loamy fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches	loamy fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6.5 Min: 6.1
2	5 inches	29 inches	loamy fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 6.5 Min: 6.1
3	29 inches	59 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 705 Min: 141	Max: 6.5 Min: 6.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

RE: Petroleum Contamination at LONGVIEW PUBLISHING COMPANY in Bellevue, WA

Dear Site Owner:

A recent review of Ecology's Leaking Underground Storage Tank database indicates that we have not received a final cleanup report for LONGVIEW PUBLISHING COMPANY located at 1705 132nd Avenue Northeast, in Bellevue, WA.

The Model Toxics Control Act requires submittal of interim or final cleanup reports within ninety (90) days of completion of the cleanup action. Please submit an update of cleanup activities (performed or planned) to Ecology within thirty (30) days of receipt of this letter. Please provide a copy of any interim or final reports generated for the site which have not already been submitted to Ecology.

You may address the update information to:

Washington State Department of Ecology
Toxics Cleanup Program/NWRO
Attention: Carla Skog
3190 - 160th Ave. SE
Bellevue, WA 98008-5452

Thank you for your cooperation in this matter. If you have any questions or concerns, please call and leave a detailed message at (360) 407-7562. Your message will be forwarded to the appropriate regional inspector and it may be several days before you receive a return call. If you feel you have received this letter in error, please contact Carla Skog, at the Northwest Regional Office at (425) 649-4426 so that we may update the information contained in our database.

Sincerely,

Lydia Cabeza
Environmental Technician
Toxics Cleanup Program

STATE OF WASHINGTON

DEPARTMENT OF ECOLOGY

Northwest Regional Office, 3190 - 160th Ave S.E. • Bellevue, Washington 98008-5452 • (425) 649-7000

April 2, 2002

Mr. Robin Hansen
Cadman, Inc.
7735 178th Place NE
PO Box 97073
Bellevue, WA 98052

Dear Mr. Hansen:

Re: Independent Remedial Action at Cadman Bellevue, 1701 130th Avenue NE, Bellevue, Washington.

Thank you for submitting the results of your independent remedial action for review by the Washington State Department of Ecology (Ecology). Ecology appreciates your initiative in pursuing this administrative option under the Model Toxics Control Act (MTCA).

Ecology's Toxics Cleanup Program has reviewed the following information regarding the Cadman Bellevue facility located at 1701 130th Avenue NE, Bellevue, Washington:

1. Independent remedial action report *Request for No Further Action Determination, AST Shed/UST Area Total Petroleum Hydrocarbon Release*, dated November 28, 2001, submitted December 17, 2001, by Hartcrowser.
2. Ecology site file was reviewed, which included the independent remedial action report *AST Shed/UST Area Total Petroleum Hydrocarbon Release*, dated August 31, 1998, submitted September 10, 1998, by Hartcrowser.

The reports listed above will be kept in the Central Files of the Northwest Regional Office (NWRO) of Ecology for review by appointment only. Appointments can be made by calling Sally Perkins at the NWRO at (425) 649-7190 or -7239.

Based upon the information in the reports listed above, Ecology has determined that, at this time, the release of petroleum into the soil and groundwater no longer poses a threat to human health or the environment.

Therefore, Ecology is issuing this determination that no further remedial action is necessary at this site under MTCA, chapter 70.105D RCW. However, please note that because your actions were not conducted under a consent decree with Ecology, this letter is written pursuant to RCW 70.105D.030(1)(i) and does not constitute a settlement by the state under RCW 70.105D.040(4) and is not binding on Ecology.

Mr. Robin Hansen

April 2, 2002

Page 2

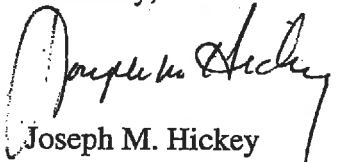

Ecology's no further action determination is made only with respect to the release identified in the reports listed above. This no further action determination applies only to the area of the property affected by the release identified in the reports at 1701 130th Avenue NE, Bellevue, Washington. It does not apply to any other release or potential release at the property, any other areas on the property, nor any other properties owned or operated by Cadman, Inc.

Ecology will update its database to reflect this "No Further Action" determination. Your site will not appear in future publications of the Confirmed & Suspected Contaminated Sites Report (previously known as the Affected Media and Contaminants Report).

The state, Ecology, and its officers and employees are immune from all liability and no cause of action of any nature may arise from any act or omission in providing this determination.

If you have any questions, please contact me at 425-649-7202.

Sincerely,

Joseph M. Hickey
Toxics Cleanup Program

Cynthia Walcker, Senior Water Quality Inspector with the Department of Ecology and Tammy Sacayanan, ERTS Coordinator with the Department of Ecology conducted a compliance inspection at Cadman Bellevue on February 3, 2009.

Summary of Findings/Comments

General Observations

Ecology Inspector, Cynthia Walcker and Ecology ERTS Coordinator, Tammy Sacayanan met with Mr. Jason Adcox (Batch Plant Manager) and J. Deonna Jernigan (Cadman Environmental Compliance Technician) at Cadman's concrete batch plant in Bellevue. This facility operates as a satellite batch plant and has operated approximately five times during the past three months. The inspection began with a tour of the facility which includes a batch plant, concrete-lined process water impoundment, storage facility for admixtures, chemical storage, aggregates yard, conveyor belt system, CO₂ sparging system and unlined detention pond.

Of concern to Ecology is the following:

- The unlocked overflow valve for the admixture's secondary containment structure.

- A pH reading of 5.96 associated with the facility's CO₂ sparging system.

1. Water Management (Permit Condition S7)

Concrete Batch Plant Process Water:

- The digital pH meter associated with the CO₂ sparging system (located approximately 300-400 feet west of the batch plant) was 5.96. Mr. Adcox explained that for some unknown reason, the CO₂ sparging system at Cadman Bellevue over sparges causing low pH readings (see Photos #12 and #13). However, Ms. Jernigan conducts monthly sampling for pH at the unlined impoundment and consistently finds that the pH is in compliance with the Permit's effluent limitation. For example, she obtained a pH value of 8.47 in January 2009.

2. Stormwater Pollution Prevention Plan (Permit Condition S9)

The facility's concrete walled secondary containment structure for the storage of admixture has an outlet valve which when opened conveys any liquid that has pooled inside the structure onto the bare ground (see Photos #6 and #7).

Ecology recommends that Cadman install a locking device on the outlet valve and establish a written procedure for how discharge from the outlet valve is managed. Please address the following items:

- Who is the designated individual at Cadman responsible for opening the valve?
- Under what conditions if ever is liquid inside the containment area discharged onto the ground?
- How does Cadman manage pooled liquid inside the concrete-walled containment?

Additionally, Ecology observed that an outfall pipe located in the southwest corner of the detention pond (SW corner of facility) is connected to a manhole which appears to be tightlined to the City of Bellevue municipal stormwater conveyance system. A riser has been installed inside the manhole (see Photo #16). Mr. Adcox climbed down inside the manhole and confirmed that the inlet pipe has been capped. Therefore, it appears that water from Cadman's detention pond is not being conveyed to surface waters of the state. Please note that Cadman Bellevue is not authorized to convey process water or stormwater to surface waters. If this were to occur, Cadman is required to follow the **Permit's Noncompliance Notification (see Permit Condition S6)**.

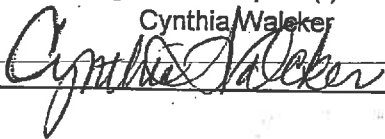

REQUIRED ACTION ITEMS for PERMIT COMPLIANCE and ASSOCIATED TIMELINE

Within 30 days of receiving this report:

- Provide Ecology with a written plan regarding management of the outlet valve associated with the admixture containment structure.

Please send all requested information including photo documentation that shows how you have addressed the above-mentioned items to:

Redmond, WA 98073-9738

Re: Independent Remedial Action Report
AST Shed/UST Area Total Petroleum Hydrocarbon (TPH) Releases
Cadman Bellevue Property - 1701 130th Avenue NE
Bellevue, Washington

7605

Dear Ms. Nelson:

This letter report summarizes site characterization and soils remediation efforts related to TPH releases at the referenced site located in Bellevue, Washington (Figure 1). TPH releases occurred near an above-ground storage tank (AST) shed which was previously used for diesel fueling. Cadman removed the AST, shed, and shed foundation in April 1998. Two diesel underground storage tanks (UST) were also reportedly removed at this location in 1988 by Lakeside Industries, a previous site owner/operator.

The project work scope consisted of:

- ▶ Determining the nature and extent of TPH releases to soil and groundwater near the AST shed/UST location;
- ▶ Removing TPH-affected soils for off-site recycling as an MTCA Independent Remedial Action; and
- ▶ Preparing this document as an Independent Remedial Action report in general accordance with requirements of the Washington State Model Toxics Control Act (MTCA - Chapter 173-340

Cadman, Inc.
August 31, 1998

J-4970-01
Page 2

WAC), and based on the format described in the Washington State Department of Ecology (Ecology) Publication No. 94-18 for the Independent Remedial Action Program (IRAP).

Hart Crowser conducted soils and groundwater characterization at the Cadman Bellevue property in April 1998. Test pits, groundwater monitoring wells, and soil borings were completed to provide soil and groundwater samples for chemical analysis. Based on the results of this work, Cadman determined that excavation and off-site recycling of TPH-affected soils would be appropriate, in anticipation of potential property lease or sale. The soil removal action was accomplished in late May and early June of 1998.

The remainder of this letter report presents an **EXECUTIVE SUMMARY** followed by subsequent sections including:

- ▶ **PROJECT BACKGROUND AND SITE DESCRIPTION;**
- ▶ **SITE TOPOGRAPHY AND GEOLOGY;**

Detailed discussion of the project findings are incorporated into the text, as appropriate. For context purposes, sampling and analysis results are discussed with the site characterization and remedial action descriptions, rather than in a separate section per the IRAP format.

Figure 1 presents a Site and Exploration Plan which identifies the locations of site explorations and relevant site features. Figure 2 presents groundwater flow data, and the soils excavation area is detailed on Figure 3. Tables 1 through 4 present chemical analysis results for soil and groundwater samples collected for the project. Tables, figures, and appendices are located at the end of the report text.

EXECUTIVE SUMMARY

Elevated TPH concentrations were detected in soil samples collected near the AST shed/UST area during the April 1998 field work (see Figure 1 and Figure 3, and Table 1 and Table 2). Diesel- and oil-range TPH in soil were detected up to concentrations of 11,000 milligrams per kilogram (mg/kg) and 2,300 mg/kg, respectively, in sample S-2 from monitoring well MW-3 (Figure 1). This sample was collected at a depth of 8.5 to 9.0 feet below grade. Elevated diesel-range (2,500 mg/kg) and oil-

Cadman, Inc.

J-4970-01
Page 3

range (650 mg/kg) TPH were also detected in a soil sample from 1994 test pit TP-8 collected near the AST shed at a depth of 2 feet.

A single groundwater sample collected from well MW-3 contained diesel-range hydrocarbons at a concentration of 8.7 milligrams per liter (mg/L). Depth to groundwater in this area varied from about 5 feet below grade (MW-3) to an estimated 8 feet below grade in 1998 test pits TP-1 and TP-2. Groundwater seepage was not observed in this area during 1994 field work (1994 test pits completed to depths of about 7 feet below grade). Comparison of the 1994 and 1998 groundwater conditions indicate that groundwater elevations may fluctuate over time.

Report?

Sample analysis results and field screening indicators (e.g., visible soil staining and photoionization detector [PID] readings) indicated that TPH-affected soils were present near the AST shed over the approximate area identified on Figure 1 and Figure 3. Because of elevated TPH concentrations in area soil samples and in the MW-3 groundwater sample, Cadman determined that removal and recycling of the affected soil would be appropriate, along with further investigation of the affected area. In total, 323 tons of TPH-affected soil were removed on May 27, 28, and June 3, 1998, for off-site recycling via asphalt batching. Soils were removed to just below the groundwater table at depths ranging from about 5 to 6 feet below grade. Caving conditions inhibited the removal of additional soils below the groundwater table. Cadman conducted the soil removal in accordance with applicable MTCA requirements.

Verification soil samples were collected from the excavation side walls following soil removal. The verification samples were collected from just above the waterline. One additional soil sample representative of the excavation floor soils was also collected for laboratory analysis. No TPH was detected from these ^(verification) samples above the analytical detection limits, with the exception of north side wall sample EX-N-2 which contained residual concentration of diesel-range TPH at 14,800 mg/kg. This sample was collected from a localized lens of stained soil which extended to the north beneath the concrete roadway pavement and could not be excavated. The volume of TPH-affected soil remaining beneath the roadway is estimated to be less than 2 cubic yards.

Soils excavation required removal of well MW-3 to facilitate the remedial action. A replacement well, MW-3A, was installed 40 feet southwest of the excavation boundary, in the downgradient groundwater flow direction (Figure 2). No TPH concentrations above the analytical detection limit were detected in a groundwater sample obtained from this well in June 1998. These findings indicate that the source removal action has effectively eliminated potential future impacts to groundwater. Further, these findings indicate that historical impacts to groundwater, if any, did not extend beyond the excavation limits.

J-4970-01
Page 4

Recommendations

Groundwater from well MW-3A should continue to be sampled and analyzed for diesel-range petroleum hydrocarbons. Recommended monitoring includes quarterly sampling through the summer of 1999. If analysis results continue to be non-detect for diesel-range TPH, one additional groundwater sample should be collected during the year 2000 wet season to verify this non-detect condition. Monitoring results will be forwarded to Ecology.

In the event localized, isolated zones of soil with potential TPH constituents are encountered during future site development, appropriate health and safety measures should be implemented.

PROJECT BACKGROUND AND SITE DESCRIPTION

Site Location and Contact Information

Site Name:	AST Shed/UST Area - Cadman Bellevue Property
Site Map:	See Figure 1 and Figure 3
Street Address:	1701 130th Avenue NE
Mailing Address:	Cadman, Inc. P.O. Box 97038 Redmond, WA 98073-9738
Contact:	Ms. Robin Nelson
Phone Number:	(425) 867-1234
Zoning:	Commercial/Industrial
Environmental Consultant:	Hart Crowser
Contact:	Rick Moore
Phone Number:	(206) 324-9530

The project site includes the soil removal area near the location of the former AST shed and UST (Figure 1 and Figure 3). This site area is part of a larger property owned by Cadman which

Cadman, Inc.
August 31, 1998

J-4970-01
Page 5

encompasses 9.5 acres west of 130th Avenue NE and north of NE 5th Place. The property is located in an industrial part of Bellevue, and is operated by Cadman for concrete products batching. The batch plant and associated materials storage and parking areas are situated on the northern part of the property. The southern and western parts of the property are undeveloped with wooded areas and brush. Cadman acquired the property from Lakeside Industries in 1989.

Project Background and Potential TPH Sources

Still paying taxes!

As part of a background environmental assessment, Hart Crowser reviewed the following information sources to provide an inventory of potential historical sources of TPH at the Cadman Bellevue property and immediate vicinity:

- ▶ Aerial photographs (Walker and Associates, 1946 and 1956; Puget Sound Regional Transportation Study, 1965; Washington State Department of Natural Resources, 1970, 1981, 1985, 1989, and 1995);
- ▶ Polk City Street Directories (Bellevue, 1959, 1960, 1962, 1964-65, 1970, 1975, 1980, and 1985); and
- ▶ County Atlases (Kroll, 1950 and 1974).

We also interviewed Bill Pangburn and John Jones, former facility personnel who worked at the property from the 1960s to 1989 with previous operators, including Lakeside Industries.

According to the sources cited above, the northern part of the property has been used as a concrete batch plant by Cadman predecessors since the mid-1950s. Diesel vehicle fueling was historically conducted at various locations between the batch plant and a mixer truck slurry wash-out pad which was previously located on the southern part of the property (Figure 1). The AST shed was constructed in the 1960s, and probably contained fuel pumps as well as the AST. According to John Jones, two diesel USTs were located immediately south of the AST shed until reportedly removed by Lakeside in 1988, prior to the effective date of current state UST regulations (Chapter 173-360 WAC). The AST shed contained a 250-gallon AST for diesel fueling which Cadman took out of service and cleaned in 1995. Cadman removed the AST, shed structure, and shed foundation in May 1998. Also, washout of mixer truck slurry was discontinued after Cadman acquired the property from Lakeside in 1989.

Cadman, Inc.
August 31, 1998

J-4970-01
Page 6

Based on the historical review, the AST shed, USTs, and former truck washout pad were identified as potential sources of TPH releases. The review did not identify obvious sources of potential off-site migratory TPH contamination. Based on site topography and geology, the inferred groundwater flow direction is from northeast across the Cadman Bellevue property (Figure 2).

SITE TOPOGRAPHY AND GEOLOGY

Topography

The northern and eastern portions of the Cadman Bellevue property are characterized by relatively flat or gently sloping topography, with elevations in the 180 to 190 feet (NAVD) range along the inner slope break of the bank (Figure 1). Toward the northeastern corner of the property, elevations rise to an estimated 200 to 205 feet. The bank area drops steeply toward the western and southern property boundaries to elevations ranging between roughly 150 to 175 feet. The AST shed/UST soils excavation area is essentially flat.

Geology

Based on subsurface observations during test pit, monitoring well, and soil boring explorations, subsurface soils at the site generally consist of the following:

- ▶ Near-surface silty, gravelly Sand Fill; and
- ▶ Deeper silty, gravelly Sand (interpreted as native deposits).

Near-surface silty, gravelly Sand Fill was observed to be in a medium dense condition, with varying content and distribution of silt within a gravelly sand matrix. The fill was layered in some locations and contained scattered sticks and wood debris. In other locations, the fill was more homogenous, making identification of the contact with underlying native deposits difficult. The contact between the soil fill and native deposits was often distinguished in the field based on the contrasting density of the soil types. The inferred thickness of the upper fill varied from less than 5 to about 10 feet.

Where observed, the **underlying native silty, gravelly Sand** were dense to very dense, which is typical of glacially overridden sediments in the Puget Sound region. The high sand and gravel content of these native soils is indicative of glacial outwash deposits.

Groundwater Occurrence

The depth to groundwater in site explorations and during soil removal varied from about 5 feet below ground surface in monitoring well MW-3 (immediately east of the former AST shed), to about 11 feet in well MW-1 (near the inner slope break of the bank). In the test pits completed, groundwater seepage was observed at depths consistent with static water table depths noted in nearby wells, or several feet lower. Groundwater mounding and recharge may occur near the well MW-3 and test pit TP-2 area due to surface infiltration from runoff from the adjacent pavement (Figure 2). Groundwater flow direction is to the southwest toward the bank slope, as indicated on Figure 2. Groundwater seepage was not encountered in 1994 test pits completed near the AST shed, indicating that groundwater levels may fluctuate over time.

The occurrence of near-surface groundwater in the vicinity of the Cadman Bellevue property likely represents a perched condition within glacially derived soils.

TPH RELEASE INFORMATION AND SITE CHARACTERIZATION

Field exploration efforts and soil and groundwater chemical analyses results indicated that TPH-affected soils were present over the approximate area identified on Figure 1 and Figure 3. TPH in groundwater was detected at one sampling location (MW-3); located in the soils excavation area.

1998 Test Pit, Monitoring Well, and Soil Boring Explorations

To assess the potential extent of affected soil and/or groundwater near possible TPH sources, Hart Crowser completed test pits 98TP-1 through 98TP-11, groundwater monitoring wells MW-1 through MW-3, and soil boring HC-3 in April 1998. Exploration locations are identified on Figure 1. Explorations were also completed at other locations at the Cadman Bellevue property to provide additional soil and groundwater observational and sampling data. Field sampling methods and exploration logs are presented in Appendix A. Figure A-1 is a Key to Exploration Logs which presents additional explanatory information for soil descriptions and exploration logs reported herein.

Test pit explorations were excavated by backhoe on April 15, 1998, to depths of up to 9 feet below grade. Test pit depths were limited by caving conditions at or below the groundwater table. One to two discrete, representative soil samples were collected from each test pit for field screening and chemical analysis. Soil borings and monitoring wells were completed on April 13 and 14, 1998, using a 4-inch hollow-stem auger rig, with 2-inch split-spoon sampling at approximate 5-foot-depth

intervals. Following removal of well MW-3 during excavation of TPH-affected soils in June 1998, well MW-3A was installed about 40 feet downgradient (southwest) of the excavation boundary on June 18, 1998 (Figure 1). Well screen completion depths ranged from 13 to 20 feet below grade, with 10-foot screened intervals.

1994 Test Pit Explorations

In 1994, Hart Crowser completed test pits TP-1 through TP-10 during a field screening assessment (Figure 1). The 1994 test pits were completed to a maximum depth of about 7 feet below grade. Test pits TP-7 and TP-8 were completed near the AST shed and test pits TP-1, TP-2, and TP-3 were completed near the former truck washout pad. The 1994 test pit logs are presented in Appendix B.

Field PID Screening Results

Soil samples were monitored in the field for the presence of volatile organic vapors using a HNU PID. The PID is a field screening device to determine whether volatile constituents indicative of TPH releases may be present. Slightly elevated PID readings were detected in well MW-3 soil samples S-2 at 7.5 to 9.0 feet, S-3 at 12.5 to 13.5 feet, and S-4 at 17.5 to 18.8 feet. These readings were 15, 4, and 4 HNU units, respectively. There were no PID readings above the ambient background of 1 HNU unit, nor odors noted in the other explorations. PID measurements for exploration soil samples are presented on the exploration logs in Appendix A.

Chemical Analysis Results

Soil and groundwater samples were submitted to the TEG Northwest Inc. (TEG) Seattle and Bellevue laboratories for chemical analysis. The soils samples were submitted for TPH analysis via Ecology Method NWTPH-HCID (Table 1). Groundwater samples were submitted for gasoline-range hydrocarbon analyses via Ecology Method NWTPH-Gx; benzene, toluene, ethylbenzene, and xylenes (BTEX) analysis via EPA Method 8020; and diesel-range hydrocarbons (extended) analysis via Ecology Method NWTPH-Dx (Table 2). Complete laboratory analytical documentation for the soil and groundwater chemical analyses is presented in Appendix C.

Soil Analysis Results

Soil sample S-2 from monitoring well MW-3, located near the AST shed, contained diesel-range TPH at a concentration of 11,000 mg/kg, and oil-range TPH at a concentration of 2,300 mg/kg (Table 1). Petroleum odors were present in cuttings from depths of about 4 to 10 feet, with faint odors noted

Cadman, Inc.
August 31, 1998

J-4970-01
Page 9

below. Analysis of soil sample MW-3 S-5, collected at a depth of 22.5 to 23.0 feet below grade, did not detect concentrations of petroleum hydrocarbons. A soil sample collected at a depth of 2 feet below grade in 1994 test pit TP-8 contained 2,500 mg/kg diesel-range TPH, and 650 mg/kg oil-range TPH. Test pits TP-7 and TP-8 were located near the AST shed (Figure 1). No other soil samples collected during the 1994 or 1998 field work contained detectable TPH concentrations.

Groundwater Analysis Results

A single groundwater sample from well MW-3 contained a TPH concentration of 8.7 mg/L (diesel-range) and 1.8 mg/L (oil-range). This well is located near suspected TPH source area. The chromatograms indicate the oil-range TPH represents the trailing edge of the diesel profile, rather than a separate oil-range product type. Sample MW-3 also contained a concentration of 1.1 mg/L gasoline-range TPH. (The laboratory duplicate concentration was 1.2 mg/L). The laboratory chromatograms indicate the gasoline-range hydrocarbons represent the leading edge of the diesel-range profile, rather than a separate gasoline product type.

There were no BTEX components detected in the groundwater sample from MW-3. Groundwater samples from downgradient wells MW-1 and MW-2 were non-detect for TPH and BTEX constituents.

Data Quality Evaluation

Hart Crowser reviewed laboratory results for the chemical samples analyzed to verify that the data met acceptable quality assurance/quality control (QA/QC) criteria. The criteria included the following parameters:

- ▶ Holding Times;
- ▶ Method Blanks;
- ▶ Surrogate Recoveries;
- ▶ Blank Spike Recoveries;
- ▶ Laboratory Duplicate Relative Percent Difference (RPD);
- ▶ Detection Limits; and
- ▶ Chain of Custody.

The laboratory established control limits for the given parameters were met except for the hexacosane surrogate recovery for the NWTPH-D analysis of sample MW-1. The surrogate recovery of 64% was below the acceptance limit of 65%. Hexacosane is an oil-range surrogate. The two

8.7
1.8
1.1
11.6
TPH PPH
gww

diesel-range surrogate recoveries were within acceptance limits. Therefore, the MW-1 data were not qualified. The samples were received by the laboratory intact, in a sealed cooler containing blue ice. No data were qualified or rejected based on this evaluation for this project.

EXPLANATION OF REMEDIAL ACTION AND RATIONALE FOR SELECTION

Given the limited potential extent of site soils and groundwater possibly affected by TPH releases near the AST shed/UST area, Cadman determined that removal and off-site recycling of TPH-affected soils would be an effective, practical remedial option for long-term source control. This determination was selected based on the following rationale:

- ▶ Soil removal and recycling are proven, and Ecology-preferred remedial technologies which result in a permanent remedial solution;
- ▶ The remedial action eliminates potential human health and environmental risks associated with direct contact, soil-to-groundwater, and soil-to-air pathways;
- ▶ Possible localized areas of residual TPH-affected soil which could not be excavated are not expected to be a significant TPH source to the exposure pathways listed above. This conclusion was confirmed by groundwater sampling data from downgradient well MW-3A which was non-detect for TPH in June 1998; and
- ▶ The remedial action is compatible with a variety of future site use scenarios.

In order to maximize potential future site property uses applicable MTCA Method A soil and groundwater cleanup levels for TPH and BTEX constituents were used to guide the soil removal action and to assess the effectiveness of the cleanup action:

Constituent	Soil in mg/kg	Groundwater in ug/L
Gasoline-Range TPH	100	1,000
Diesel-Range TPH	200	1,000
Oil-Range TPH	200	1,000
Benzene	0.5	5
Toluene	40	40
Ethylbenzene	20	30
Total Xylenes	20	20

Soils Removal Action

In total, 323 tons of TPH-affected soil were removed from the excavation area via track-mounted backhoe on May 27, May 28, and June 3, 1998 (Figure 3). The soil removal activities were observed by a Hart Crowser field representative. Test pit logs of the final excavation soils are provided in Appendix A for the north, south, east, and west side walls.

Hart Crowser defined the excavation boundaries by examining soils for indicators of suspect TPH constituents such as sheen, discoloration, and odor. Discrete, jarred samples of the excavation soils were frequently collected for PID sample jar headspace field screening to guide soils removal. The excavation depth ranged from 5 to 8 feet below grade but was limited by groundwater seepage at approximately 4 to 5 feet depth. To the extent practical, soils with obvious indications of suspect TPH were removed from below the water line. Sheen was locally present on water accumulating in the excavation.

Hart Crowser collected representative soil verification samples from each side wall for chemical analysis following initial soil removal efforts on May 27. These samples are listed in Table 3 as EX-S, EX-SE, EX-SW, EX-N, EX-NE, and EX-NW, ET-1, and ET-3. The samples were collected at depths just above the waterline (4 to 5 feet below grade) and are representative of the soils left in-place. Headspace PID readings in these samples ranged from less than 1 to 2 PID units (sample EX-N). Because of groundwater seeping into the excavation, representative bottom samples could not be obtained, with the exception of sample ET-2 which was collected at a depth of 6 feet in the western portion of the excavation. Roughly 40 cubic yards of soil without suspect TPH were temporarily removed from the southeast, southwest, and western portions of the excavation and temporarily stockpiled for sampling (composite samples SP-1, SP-2, and SP-3 listed in Table 3).

Hart Crowser submitted the soil samples for analysis of gasoline-, diesel-, and oil-range TPH constituents, and BTEX (Table 3). No constituents above the analytical detection limits were detected in the samples with the exception of north side wall sample EX-NW. Detected TPH concentrations in the latter sample were 780 mg/kg (diesel-range) and 330 mg/kg (oil-range). Additional soil were then excavated from the northwest part of the excavation on June 3, and the side walls were resampled near the northwest corner (Table 3 samples EX-NW-2 and EX-N-2). No TPH or BTEX constituents were detected in sample EX-NW-2, but diesel-range TPH was detected in sample EX-N-2 at a concentration of 14,800 mg/kg. This sample was collected from a localized lens of stained soil which extended to the north beneath the concrete roadway pavement and could not be excavated. The volume of TPH-affected soil remaining beneath the roadway is estimated to be less than 2 cubic yards.

Cadman, Inc.
August 31, 1998

J-4970-01
Page 12

Off-Site Recycling

All TPH-affected soils were shipped by truck to CSR Associated in Everett for incorporation into asphalt batching and beneficial reuse in this recycled form. Truck shipment trip tickets to CSR are provided in Appendix D. CSR obtained six discrete representative samples of the soil for NWTPH-Dx characterization analyses at the CSR Everett laboratory. Detected concentrations of diesel-range TPH ranged from 154 to 1,820 mg/kg, with no oil-range constituents detected (Table 4). Complete laboratory QA/QC documentation is available at the CSR facility, and no deficiencies were reported.

The soil stockpiles without suspected TPH, and determined to be non-detect through sample analysis, were replaced in the excavation as fill. The remainder of the excavation was backfilled with clean, off-site pit-run fill by Cadman.

CLOSING

Work for this project was performed, and this letter report prepared, in accordance with generally accepted professional practices for the nature and conditions of the work completed in the same or similar localities, at the time the work was performed. It is intended for the exclusive use of Cadman, Inc. for specific application to the referenced property. This report is not meant to represent a legal opinion. No other warranty, express or implied, is made.

It should be noted that Hart Crowser relied on information provided by the firms indicated in the report text. Hart Crowser can only relay this information and cannot be responsible for its accuracy or completeness.

Any questions regarding our work and this letter report, the presentation of the information, and the interpretation of the data are welcome and should be referred to Rick Moore.

Re: Quarterly Groundwater Monitoring Report (Fall 1998 and Winter 1999)
Total Petroleum Hydrocarbon (TPH) Cleanup - Former AST Shed/UST Area
Cadman Bellevue Property - 1701 130th Avenue NE
Bellevue, Washington

Dear Ms. Hansen:

This letter report summarizes chemical results of quarterly groundwater sampling and analysis for fall 1998 and winter 1999 at the referenced site located in Bellevue, Washington (Figure 1). Following the removal of TPH-affected soils near the former above-ground storage tank shed (AST) and underground storage tank (UST) area in June 1998, groundwater samples from monitoring well MW-3A were analyzed for TPH, as recommended in our Independent Remedial Action Report (Hart Crowser, August 1998). Chemical test results indicate that TPH concentrations in groundwater continue to remain below Washington State Model Toxics Control Act (MTCA-Chapter 173-340 WAC) Method A cleanup levels in the samples collected. These results indicate that residual TPH in groundwater at the referenced site does not pose a threat to human health or the environment. Groundwater from well MW-3A should continue to be sampled and analyzed for diesel-range petroleum hydrocarbons on a quarterly basis through the fall of 1999, with monitoring results forwarded to Ecology.

The remainder of this letter report presents a **PROJECT BACKGROUND AND SITE DESCRIPTION** followed by subsequent sections including:

- ▶ **SITE GEOLOGY;**
- ▶ **GROUNDWATER SAMPLING AND ANALYSIS RESULTS;** and
- ▶ **CLOSING.**

Figure 1 presents a Site Map and Groundwater Elevation Contour Map which identifies site groundwater monitoring wells, groundwater flow data, and other relevant site features. Table 1 presents groundwater elevations in site monitoring wells, and Table 2 presents chemical analysis results for groundwater samples collected from MW-3A. Tables, figures, and appendices are located at the end of the text.

PROJECT BACKGROUND AND SITE DESCRIPTION

Site Location and Contact Information

Site Name:	AST Shed/UST Area - Cadman Bellevue Property
Site Map:	Figure 1
Street Address:	1701 ¹⁶⁰⁵ 130th Avenue NE
Mailing Address:	Cadman, Inc. P.O. Box 97038 Redmond, WA 98073-9738
Contact:	Ms. Robin Hansen
Phone Number:	(425) 867-1234
Zoning:	Commercial/Industrial
Environmental Consultant:	Hart Crowser
Contact:	Rick Moore
Phone Number:	(206) 324-9530

The project site includes the area in the vicinity of the former AST shed and UST (Figure 1). This site area is part of a larger property owned by Cadman which encompasses 9.5 acres west of 130th Avenue NE and north of NE 5th Place. The property is located in an industrial part of Bellevue and

NE 15th

Cadman, Inc.
April 28, 1999

J-4970-01
Page 3

is operated by Cadman for concrete products batching. The batch plant and associated materials storage and parking areas are situated on the northern part of the property. The southern and western parts of the property are undeveloped with wooded areas and brush. Cadman acquired the property from Lakeside Industries in 1989.

Cadman performed a soil removal action in late May and early June of 1998 to address soil affected by historical petroleum releases near the location of the former AST shed and two diesel USTs. The ASTs were removed as part of the remediation, and the USTs were reportedly removed by Lakeside in 1988, prior acquisition of the property by Cadman. In total, 323 tons of TPH-affected soil were removed for off-site recycling via asphalt batching at CSR Associated in Everett, Washington. The soil excavation area is identified on Figure 1. Cadman conducted the soil removal as an MTCA Independent Remedial Action under Ecology's voluntary cleanup program. Cadman transmitted the Independent Remedial Action Report to Ecology on September 8, 1998.

Soils excavation required removal of well MW-3 to facilitate the remedial action. A replacement well, MW-3A, was installed 40 feet southwest of the excavation boundary for post-remediation monitoring, this location is in the downgradient groundwater flow direction from the excavation area (Figure 1). Wells MW-1 and MW-2 were installed as part of previous site assessment related to the TPH condition. No TPH constituents were detected in soil or groundwater above the analytical detection limits in samples analyzed from these wells.

SITE GEOLOGY AND GROUNDWATER FLOW

Based on subsurface observations during the site investigation and the soil removal action, the uppermost soils at the site generally consist of silty, gravelly sand fill containing scattered sticks and wood debris. The fill layer is underlain by gravelly sand (interpreted as native deposits), which is typical of glacially overridden sediments in the Puget Sound region. The high sand and gravel content of these native soils is indicative of glacial outwash deposits. The contact between the fill and native deposits was often distinguished based on the contrasting density of the soil types, with the inferred thickness of the fill varying from about 5 to 10 feet.

As shown on Figure 1, groundwater flow direction has consistently been to the west-southwest, based on groundwater elevation data collected since April 1998 (Table 1). Groundwater elevations varied seasonally by about 2-1/2 to 4 feet in wells MW-1, MW-2, and MW-3A, with the lowest elevations occurring in October 1998 and the highest occurring in January 1999.

GROUNDWATER SAMPLING AND ANALYSIS RESULTS

Chemical test results collected to date are summarized in Table 2. With the exception of the January 1999 groundwater sample, no TPH concentrations above the analytical detection limits have been detected in well MW-3A since its installation in June 1998. In the January 1999 sample, diesel-range TPH was detected at a concentration of 0.269 milligrams per liter (mg/L), just above the 0.25 mg/L detection limit. This concentration is well below the 1.0 mg/L MTCA Method A groundwater cleanup level. These findings indicate that TPH-impacted groundwater does not extend beyond the excavation boundary.

Field sampling methods are described in Appendix A. Laboratory analytical documentation for the October 1998 and January 1999 sampling events is provided in Appendix B. Documentation for the June 1998 event is included with the August 1998 Independent Remedial Action Report.

Data Quality Evaluation

Hart Crowser reviewed laboratory results for the chemical samples analyzed to verify that the data met acceptable quality assurance/quality control (QA/QC) criteria. The criteria included the following parameters:

- ▶ Holding Times;
- ▶ Method Blanks;
- ▶ Surrogate Recoveries;
- ▶ Blank Spike Recoveries;
- ▶ Laboratory Duplicate Relative Percent Difference (RPD);
- ▶ Detection Limits; and
- ▶ Chain of Custody.

The laboratory established control limits for the given parameters were met. The samples were received by the laboratory intact, in a sealed cooler containing blue ice. No data were qualified or rejected based on this evaluation for this project. The data are acceptable for use, as reported.

CLOSING

Work for this project was performed, and this letter report prepared, in accordance with generally accepted professional practices for the nature and conditions of the work completed in the same or similar localities, at the time the work was performed. It is intended for the exclusive use of

Cadman, Inc.
April 28, 1999

J-4970-01
Page 5

Cadman, Inc. for specific application to the referenced property. This report is not meant to represent a legal opinion. No other warranty, express or implied, is made.

Any questions regarding our work and this letter report, the presentation of the information, and the interpretation of the data are welcome and should be referred to Rick Moore.

We trust that this report meets your needs.

Sincerely,

Re: **NPDES Compliance Inspection, Cadman Bellevue WAG-503114**

Dear Ms. Walcker:

We are in receipt of the report from your inspection conducted at Cadman's Bellevue facilities on February 3, 2009 by the Department of Ecology (Ecology). At the time of the inspection, Ecology was represented by Tammy Sacayanan and yourself and was accompanied by two Cadman representatives, Deonna Jernigan and Jason Adcox.

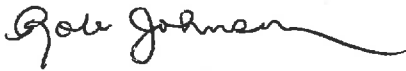

Cadman takes the issues raised during this and every inspection very seriously. As you are aware, Cadman's policy is to fully comply with all government regulations. Cadman is already working to address the key concerns expressed by Ecology. Outlined below are the actions proposed by Cadman to address the points raised in the report.

- **A pH reading of 5.96 associated with the facility's CO₂ sparging system.**
This issue has been resolved. On February 20, 2009, Air Gas serviced the CO₂ tank and verified the CO₂ was working properly. The site is temporarily closed and therefore is not actively discharging any water. The pH reading taken during your visit was due to the low levels in the tank. No discharges were ever made from the tank with these low pH levels. The reading for our latest discharge on February 25, 2009 was pH 7.0.
- **Outlet valve associated with the admixture containment structure.**
This issue has been resolved. Upon further investigation this outlet valve is sealed by concrete from the inside of concrete wall containment therefore there are no conditions when the valve could discharge onto the ground. Liquid that enters the concrete wall containment is reported to BASF (a local pumping company) to pump out the liquid and dispose of it properly. Please see attachment A for pictures showing the sealed valve.
- **Outfall pipe located in the southwest corner possible discharge of process or storm water to the City of Bellevue**
No discharge has ever been made to the City of Bellevue's system. A dye test has been conducted on site to ensure there is no off-site discharge. As stated during the inspection, the first pond would have to fill and two third of the second pond would have

to fill before water could enter the outfall pipe. The manhole inlet pipe is capped at the bottom, leaving the opening at the top which is about eight feet high.

If you have any further questions or concerns regarding this matter, please feel free to call me at the number below.

Respectfully Submitted,

Rob Johnson

**Re: Request for No Further Action Determination
AST Shed/UST Area Total Petroleum Hydrocarbon Releases
Cadman Bellevue Property - 1701 130th Avenue NE
Bellevue, Washington
7631**

Chicago

Denver

Dear Mr. Hickey:

On behalf of Cadman, Inc., we are requesting a No Further Action determination for TPH releases to soil and groundwater at the above referenced site. In 1998, Cadman performed a soil removal action to remediate soil impacted by historical releases of TPH. The soil removal was conducted as a MTCA Independent Remedial Action under the Voluntary Cleanup Program. Soil removal was followed by three years of groundwater quality monitoring downgradient of the excavation area to verify that groundwater has not been adversely impacted. Analytical results for verification samples of the excavation side walls and groundwater quality monitoring results were below MTCA Method A Cleanup Levels, with the exception of a small volume of soil beneath an existing roadway. Based on these results, TPH at the site does not pose a potential threat to human health or the environment.

Fairbanks

Jersey City

Juneau

The remainder of this letter presents **PROJECT BACKGROUND AND REMEDIAL ACTION ACTIVITIES, GROUNDWATER MONITORING RESULTS, and CLOSING.** The Voluntary Cleanup Program Request for Assistance and Site Summary form are included in Attachment A. Laboratory certificates of analysis for groundwater quality samples are included in Attachment B.

Long Beach

PROJECT BACKGROUND AND REMEDIAL ACTION ACTIVITIES

Portland

The project site includes the area around the former Above-Ground Storage Tank (AST) shed and Underground Storage Tank (UST) shown on Figure 1. This site area is part of a

larger property owned by Cadman which encompasses 9.5 acres west of 130th Avenue NE and NE 5th Place in Bellevue. Cadman acquired the property from Lakeside Industries in 1989. Reportedly the USTs were removed by the previous land owner in 1988, prior to Cadman's acquisition of the site and prior to the effective date of current state UST regulations. The property has been used as a concrete batch plant since the 1950s, with plant operations located on the northern part of the property. The southern and western parts of the property are undeveloped with wooded areas and brush.

Site investigation and cleanup activities are documented in the Independent Remedial Action Report (Hart Crowser 1998) which was transmitted to Ecology on September 8, 1998. Hart Crowser conducted a soil and groundwater characterization of the site in April 1998. Test pits, groundwater monitoring wells, and soil borings were completed to provide soil and groundwater samples for chemical analysis. Based on the results of this work, an area of soil with TPH concentrations above MTCA Method A Cleanup Levels was delineated in the vicinity of the AST shed and the former UST. Concentrations of TPH measured in groundwater at well MW-3, located in the center of the TPH-impacted soils, were also above MTCA Method A cleanup levels.

Cadman performed a soil removal action in late May and early June of 1998 to address TPH-impacted soil. The AST was removed as part of the remediation. In total, 323 tons of soil were removed for off-site recycling via thermal treatment at CSR Associated (now Rinker Materials) in Everett, Washington. Verification soil samples were collected from excavation side walls following soil removal. TPH was not detected in these samples, with the exception of one sample along the north side of the excavation. This location was underneath the concrete roadway and was not accessible for excavation. It is estimated that the total volume of TPH-impacted soil remaining beneath the roadway is less than 2 cubic yards. As discussed below, this TPH-impacted soil does not appear to be affecting groundwater. Additionally, the concrete roadway effectively prevents any direct contact exposure to TPH-impacted soils. As a result the small volume of soil beneath the roadway does not present a risk to human health or the environment.

GROUNDWATER MONITORING RESULTS

Figure 1 shows groundwater monitoring well locations, measured water levels, and interpreted groundwater elevation contours and flow directions. Groundwater monitoring well MW-3 was abandoned during soil excavation and a new well, MW-3A, was installed downgradient of the excavation area in June 1998. Consistent with recommendations in the Independent Remedial Action Report, this well was sampled quarterly between June

Cadman, Inc.
November 28, 2001

7631
Page 3

1998 and May 1999. An additional wet season sample was collected in January 2000, followed by two more sampling events in October 2000 and September 2001. The June 1998 groundwater sample from MW-3A was analyzed for diesel- and oil-range hydrocarbons by TEG Northwest using the WTPH-HCID method. Subsequent samples were analyzed by North Creek Analytical using the NWTPH-Dx method.

Groundwater monitoring results through January 1999 were previously reported to Ecology (Hart Crowser 1999). Groundwater quality monitoring results for all seven sampling rounds are presented in Table 1. Low concentrations of diesel-range hydrocarbons were detected in groundwater samples collected in January and May 1999; however, the detected concentrations are below the MTCA Method A Cleanup Level of 0.5 mg/L, as specified in the February 12, 2001, adopted MTCA amendments. Oil-range hydrocarbons were not detected above the detection limit in any of the groundwater quality monitoring rounds. These results indicate that any residual TPH at the site is not adversely impacting groundwater and does not pose a potential threat to human health or the environment.

CLOSING

Work for this project was performed, and this letter report prepared, in accordance with generally accepted professional practices for the nature and conditions of the work completed in the same or similar localities, at the time the work was performed. It is intended for the exclusive use of Cadman, Inc. for specific application to the referenced property. This report is not meant to represent a legal opinion. No other warranty, express or implied, is made.

Any questions regarding our work and this letter report, the presentation of the information, and the interpretation of the data are welcome and should be referred to the undersigned.

We trust that this report meets your needs.

Sincerely,

HART CROWSER, INC.

Has site assessment work been done at this site? yes no In-progress

If yes, when? April 1998 Were results reported to Ecology? yes no Date September 8, 1998

Describe: (list reports in "E" below)

Soil and groundwater samples were collected from test pits, soil borings, and monitoring wells. Analysis for TPH indicated a localized area of soil with concentrations above MTCA Method A levels in the vicinity of an AST and former USTs.

Remediation:

Has any site cleanup work been done at the site? yes no in-progress

If yes, please continue to answer the remaining questions in this section to the best of your ability.

When was the cleanup work done? May and June 1998

Were results reported to Ecology? yes no date September 8, 1998

Describe: (list reports in "E" below)

323 tons of soil were removed for off-site recycling via asphalt batching at CSR Associated in Everett, Washington. Verification sampling of excavation sidewalls was performed, and monitoring of downgradient water quality was begun. An AST was also removed during remediation. USTs that were formerly at the site were removed by the previous owner in 1988, prior to implementation of the current state UST regulations.

Does contamination remain on-site after cleanup activities? yes no

If yes, describe: (list reports in "E" below)

Sidewall verification samples indicate all contaminated soil was removed, except for a very small of volume (i.e., less than 2 cubic yards) of TPH-impacted soil that remains inaccessible beneath a concrete roadway. This soil is isolated from any direct contact exposure and, based on three years of groundwater quality monitoring, is not impacting groundwater.

For each contaminant listed in **Part C) Release Information (above)**, please describe the quantity of the contaminant (in pounds) which was removed or treated as a result of the cleanup activities:

Contaminant	Class (for office Use	Pounds of Contaminant:				
		Incinerated	Washed	Removed	Treated	Contained)
Example: Lead		10	20	40	10	60
1) TPH				300 - 600 (approx)		
2)						
3)						
4)						
5)						
6)						
7)						
8)						
9)						
10)						
11)						
12)						

As a result of the cleanup:

How many acres of land were returned to **unrestricted** use? Approximately 0.1

How many acres of land were returned to **restricted** use? 0

How many cubic feet of contaminated soil was remediated or contained? Approximately 5,500

How many gallons of contaminated soil was remediated or contained? 0

How many people are now at reduced risk as a result of the cleanup action? Unknown

How many pounds of potential pollution was prevented as a result of the cleanup action? 0

Methods/Treatments Used	Soil	Groundwater	Surface Water	Drinking Water	Air	Wastes
Method A	Y	N	N/A	N/A	N/A	N/A
Method B						
Method C						
Have these levels been met through the site ? Y or N	N	Y	N/A	N/A	N/A	N/A
Destruction or Detoxification						
Carbon Adsorption ¹	N/A					N/A
Biological Treatment					N/A	
Chemical Destruction						
Incineration		N/A	N/A	N/A		
¹ Carbon followed by regeneration: use of granular activated carbon followed by landfilling would be classified in these tables as volume reduction and off-site landfill						
Media Transfer						
Air stripping/Air Sparging	N/A					N/A
Aeration/Vapor Extraction		N/A	N/A	N/A	N/A	
Thermal Desorption		N/A	N/A	N/A		N/A
Immobilization						
Vitrification		N/A	N/A	N/A		
Solidification/Stabilization		N/A	N/A	N/A		
Reuse/Recycling²	Y					
Specify	Thermal Treatment					
² For example, reuse of free petroleum product recovered in a pump and treat system.						
Separation/Volume Reduction

Others						
Specify Treatment Method	N/A	N/A	N/A			

E) Documentation:

Please list titles of all site reports below. Include name of consulting firm and year completed. (If there is not enough room for the entire list, please attach additional page(s) as necessary.)

Title:	By:	Date
Independent Remedial Action Report, AST Shed/UST Area Total Petroleum Hydrocarbon (TPH) Releases, Cadman Bellevue Property, 1701 130th Avenue NE, Bellevue, Washington.	Hart Crowser	August 31, 1998.
Quarterly Groundwater Monitoring Report (Fall 1998 and Winter 1999), Total Petroleum Hydrocarbon (TPH) Cleanup – Former AST Shed/UST Area, Cadman Bellevue Property, 1701 130th Avenue NE, Bellevue, Washington.	Hart Crowser	April 28, 1999.

Is additional information concerning the contaminants treated or removed, or cleanup or remediation methods used available in a data base? yes no If yes, what programming software is use?

Is a copy included for our use? yes no

F) Property Type: Commercial Industrial Residential Other (Please specify)

Property currently being used? yes no

Plans for change in use? yes no If yes, please specify:

G) Standard Industrial Classification (SIC) Codes:

List all that apply. If none apply, or if you don't know your SIC code, list activities conducted at the site (i.e. automotive repair and maintenance, construction equipment storage, etc.).

5032 – Concrete Batch Plant

H) Dangerous Waste Facilities:

Does the facility have a dangerous waste identification number? yes no

If yes, what is the number? WAD

I) Tank Information:

Complete this table for ALL tanks, whether underground (UST) or aboveground (AST), including unregulated tanks.

(*Unleaded, leaded diesel, bunker-C, waste oil, heating oil, aviation fuel, other (identify))

(** Tank status: Left in Place, Removed, Closed in Place)

Tank ID	AST/UST	Size	Was Free Product encountered?		In Excavation	**Tank Status
			*Product	On GW		
	UST	unknown	Diesel	None Reported	None Reported	Removed 1988
	AST	250	Diesel	No	No	Removed 1998

J) Owner/Operator History

(Please photocopy and attach copies if additional owners and/or operators are known.)

Type (code) of Owner/Operator (for below):Private (1) Municipal (2) County (3) Federal (4) State (5) Tribal (6) Mixed (7) Other (8) Unknown (9)
Public Entitle Acquisition via Bankruptcy (11)

1) Current Site Owner: Cadman, Inc.	Type: 1	
Street Address: 7735 178th Place NE		
City: Bellevue	State: WA	ZIP: 98052
Contact Persons (if different than owner, above): Robin Hansen		
Street Address:		
City:	State:	ZIP:
Telephone Number: (425) 867-1234	Extension:	
Fax Number: (425) 861-4046	e-mail address: rhansen@cadmaninc.com	
Dates of Ownership: 1989	to Present	

2) Current Facility Operator: Cadman, Inc.	Type: 1	
Street Address: Same as above		
City:	State:	ZIP:
Contact Persons (if different than owner, above):		
Street Address:		
City:	State:	ZIP:
Telephone Number:	Extension:	
Fax Number:	e-mail address:	
Dates of Operation: 1989	to Present	

3) Former Site Owner: Lakeside Industries	Type: 1	
Street Address: 6505 226th PI SE		
City: Issaquah	State: WA	ZIP: 98027
Contact Persons (if different than owner, above):		
Street Address:		
City:	State:	ZIP:
Telephone Number: (206) 622-0630	Extension:	
Fax Number:	e-mail address:	
Dates of Ownership:	to 1989	

4) Former Facility Operator:	Type:	
Street Address:		
City:	State:	ZIP:
Contact Persons (if different than owner, above):		
Street Address:		
City:	State:	ZIP:

Telephone Number:	Extension:
Fax Number:	e-mail address:
Dates of Operation:	to

K) Other Involved Parties:

(Please photocopy and attach copies if additional parties are involved)

1) Environmental Consultant: Joseph Morrice		
Representing: Cadman		
Firm: Hart Crowser, Inc.		
Street Address: 1910 Fairview Avenue East		
City: Seattle	State: WA	ZIP: 98102
Telephone Number: (206) 324-9530	Extension: 4271	
Fax Number: (206) 328-5581	e-mail address: jnm@hartcrowser.com	

2) Site Control Person if other than Owner/Operator. (This must be a person who is on-site during normal working hours and is authorized and qualified to answer questions about the site, or a person who is available during normal business hours and has knowledge about the site and the remediations.		
Name:		
Relation to site/owner/operator:

Fax Number:	e-mail address:	

APPENDIX F
INTERVIEW DOCUMENTS

SITE INTERVIEW QUESTIONNAIRE

1.0 GENERAL INFORMATION

- 1.1 Business Name: Aiphone Corporation SIC Code: _____
- 1.2 Location/Address: 1700 130th Ave NE, Bellevue, WA 98005
- 1.3 Person Interviewed
- a. Name: Debbie Kirchner, Duane Davison, Frank Koch, Michael Hoyt
 - b. Title: VP Admin/HR, Whse/Logistics Mgr, Facilities Mntnce Spvsr, Engg/Prodn Mgr
 - c. Years of Familiarity with Site: 29, 25, 20, 28
- 1.4 Site History
- a. Year Property was First Developed: 1975
 - b. Prior Use before Development: None
 - c. Information concerning the operations of previous owners or tenants (obtain dates):
 - 1. _____
 - 2. _____
 - 3. _____
 - 4. _____
- 1.5 Prior locations of the current operation: Northlake Ave, Seattle
- 1.6 Are there other locations where this business has employees, land or facilities? Yes No
Explanation: _____
- 1.7 Site Utilities
- a. Electric: Yes
 - b. Gas: Yes
 - c. Water (indicate supply): City
 - d. Sewer: Yes
 - e. Other: _____
- 1.8 Is current owner or operator involved in any clean-ups or been asked to participate in any clean-ups?
 Yes No If so, describe: _____
- 1.9 Is the site located along a waterway? Yes No
If so, describe: _____
- GENERAL COMMENTS: _____

2.0 SITE AND FACILITY INFORMATION

- 2.1 Is surface water within 500 feet? Yes No
- 2.2 Groundwater Information
- a. Depth to groundwater: _____
 - b. Known uses of groundwater: _____
 - c. Are there any groundwater wells which the facility does or can monitor? Yes No
Has contamination been detected? Yes No
Comments: _____

SITE INTERVIEW QUESTIONNAIRE

- 2.3 Does the site use well water?
 a. Well depth: _____
 b. Well delivery rate: _____
 c. Well water use: _____
 d. Were any wells capped within the last five years? Yes No
 If so, explain why: _____
- 2.4 Has any major demolition occurred on the site? Yes No
 If yes, explain: _____
- 2.5 Are site maps, drawings or aerial photos available? Yes No
 If yes, obtain.
- 2.6 Do neighbors or authorities complain about odors, discharges or noise from this facility?
 Yes No If yes, explain: _____
- 2.7 Does runoff from the site flow onto or into:
 a. Other property: Yes No If yes, explain: _____
 b. Surface water: Yes No If yes, explain: _____
 c. Storm drainage: Yes No If yes, explain: _____
- 2.8 Is this facility in the 25-year or 100-year floor plan? Yes No
 If yes, explain: _____
- 2.9 Has this facility ever been flooded? Yes No
 If yes, explain: _____
- 2.10 PCB Information
 a. Is any PCB electrical equipment located on the premises (transformers, capacitors, florescent light ballasts)?
 Yes No If yes, explain: _____
 b. Did the PCB equipment ever leak? Yes No If yes, explain: _____
 c. Is any of the PCB equipment inside a building? Yes No If yes, explain: _____
 d. Is the PCB equipment marked, well maintained and secure? Yes No
 If yes, explain: _____
 e. Have there been any spills or fires involving PCB equipment? Yes No
 If yes, explain: _____
 f. Does the facility own, store or has the facility disposed of PCB's? Yes No
 If yes, explain: _____
 g. Has the facility stored on-site any PCB electrical equipment? Yes No
 If yes, explain: _____
- 2.11 Building Information
 a. Number of buildings: 1
 b. Square footage: 15,000
 c. Age of building(s): 39 yrs
 d. Construction of building(s): _____
 e. Do any buildings have asbestos-containing insulation or construction materials? Yes No
 If yes, where: Floor tile mastic was found in kitchen.
 f. Do any buildings have urea formaldehyde foam insulation? Yes No
 If yes, where: _____

SITE INTERVIEW QUESTIONNAIRE

- g. Do any of the building(s) have peeling lead paint within five feet of floor? Yes No
If yes, where: _____

SITE INTERVIEW QUESTIONNAIRE

2.12 Environmental, Health and Safety

- a. Does the facility use or manufacture OSHA hazardous chemicals? Yes No
If yes, describe: Conformal coating, rubbing alcohol, general household cleaners.
- b. Does the facility have a hazardous material inventory? Yes No
If yes, where: Yellow cabinet by Engineering.
- c. Does the facility have a Hazardous Communication Program (e.g., required by Employee or Community Right-to-Know laws)? Yes No
- d. Does the facility store more than the threshold planning quantities of hazardous substances listed in 40 CFR 300, Appendix D? Yes No If yes, describe: _____
- e. Inquire of any notices, violations and fines against the facility for alleged violations. Ask for any documentation. If yes, describe: _____
- f. Has the facility released a reportable quantities or non-de minimis amount of oil or hazardous substances? Yes No Ask whether it was reported. Yes No
If yes, with whom? _____
- g. Are there any waste disposal areas on the premises? Yes No If yes, describe: _____
- h. Does or did any operation at the facility use petroleum solvents or its derivatives, or any chlorinated solvents? Yes No If yes, describe: _____
- i. Ask whether the facility is current in compliance with all permits. Yes No

2.13 Radon

- a. Ask whether there is any concern in the local area with elevated levels of radon.
Comments and/or notes: _____
- b. Has the facility performed any test for radon on site or in the building? Yes No
If yes, where: _____

GENERAL COMMENTS: _____

3.0 HANDLING AND STORAGE OF RAW MATERIALS AND PRODUCTS

- 3.1 Ask for a list of hazardous substances and fuel used at this location.
- 3.2 Determine for these hazardous substances whether the materials are stored or processed in:
- Aboveground Storage Tanks (ASTs): _____
 - Below Ground Tanks (and sumps): _____
 - Containers: _____
- 3.3 Tank Information
- Ask for an inventory of tanks and/or containers.
 - Underground tanks:
 - Have underground tanks been leak tested? Yes No
 - Did test indicate leaks? Yes No
 - Are underground tanks contents routinely inventoried? Yes No
 - Has Inventory analysis indicated material loss? Yes No
- 3.4 Does the facility have a Spill Prevention Countermeasure and Contingency Plan? Yes No
- 3.5 Have any tanks been abandoned or removed from this location? Yes No
- 3.6 Have underground tank notifications been made to designated agencies? Yes No

SITE INTERVIEW QUESTIONNAIRE

3.7 Inquire about any know spills or releases of hazardous substances or related to the site.

Yes No If yes, describe: _____

a. Material released: _____

b. Amount: _____

c. Notification made? Yes No If yes, to whom: _____

d. Cleanup efforts: _____

GENERAL COMMENTS: _____

4.0 WASTE STREAM INFORMATION

4.1 Waste streams

a. Are hazardous wastes generated, stored, burned or disposed on-site? Yes No

If yes, describe: _____

b. Are solid wastes generated, burned or disposed on-site? Yes No

If yes, describe: _____

c. Is used oil generated, stored, burned or disposed on-site? Yes No

If yes, describe: _____

d. Determine the waste stream for all waters: _____

4.2 Hazardous Wastes

a. What is volume generated per month? Yes No

If yes, describe: _____

b. Are solid wastes generated, burned or disposed on site? Yes No

If yes, describe: _____

c. Is used oil generated, stored, burned or disposed on-site? Yes No

If yes, describe: _____

d. Determine the waste stream for all waters: _____

1.

2.

3.

4.

5.

6.

7.

8.

9.

e. Does the facility use hazardous waste as a fuel or raw material? Yes No

If yes, describe: _____

f. Has the facility ever disposed of hazardous waste on site? Yes No

If yes, describe: _____

g. Ask whether the facility has disposed of hazardous waste off-site. _____

Surface Impoundments: _____

Waste Piles: _____

Deep Wells: _____

Dry Wells: _____

Septic Systems: _____

Sewer: _____

Incinerators, Furnaces: _____

Landfills: _____

Land Treatment: _____

GENERAL COMMENTS: _____

SITE INTERVIEW QUESTIONNAIRE

5.0 WASTEWATER OR STORMWATER DISCHARGES

- 5.1 Determine the facility discharges of process wastes. _____
- 5.2 Provide permit information on discharges:
- a. Surface Water – NPDES # _____, Expiration Date: _____
 - b. Municipal Sewer – Permit # _____, Expiration Date: _____
 - c. Stormwater Permit - Permit # _____, Expiration Date: _____
 - d. Describe any discharge monitoring: _____
 1. Parameters: _____
 2. Frequency of Analysis: _____
- 5.3 Is waste water stored in a pond, pit or lagoon? Pond Pit Lagoon N/A
- a. Size, depth of lagoon: _____
 - b. Design of lagoon: _____
 - c. Sludge disposal method: _____
- 5.4 Are there any floor drains or catch basins in facility that could discharge spills, leaks or process water from storage or process areas.
- 5.5 How is runoff from roofs, and outdoor facility storage or process areas discharged? N/A
- a. Municipal sewer: _____
 - b. Storm drain or other stormwater facilities: Yes
 - c. Surface water: _____
- 5.6 Has the facility received any notices of violations for discharges? Yes No
If yes, describe: _____
- 5.7 Is the facility under any order? Yes No
If yes, describe: _____
- 5.8 Does the facility utilize a septic or drain system or a leach field? Yes No
If yes, describe: _____
- 5.9 Does the facility have a Stormwater Pollution Prevention Plan? Yes No
- GENERAL COMMENTS: _____

6.0 AIR EMISSIONS

- 6.1 Determine each permitted source and obtain a list of permitted sources.
- 6.2 Are there any air emissions sources?
- a. Process stacks, boiler stocks?
 Yes No N/A
 - b. Vents, exhaust ports? Yes
 No N/A
 - c. Fans? Yes No
 N/A

SITE INTERVIEW QUESTIONNAIRE

- d. processes? Yes No N/A
- e. mixers, spray booths)? Yes No N/A
- f. Yes No N/A
- g. Yes No N/A
- 6.3 Are any of the sources above without permits or have permits expired?
If yes, describe: _____ Yes No
- 6.4 Are any emissions vented through control devices?
- a. Fans, vents, stacks? Yes No N/A
- b. Scrubbers, filters? Yes No N/A
- c. Baghouses, cyclones, precipitators? Yes No N/A
- d. Vapor recovery systems? Yes No N/A
- e. Combustion or oxidation units? Yes No N/A
- f. Flares? Yes No N/A
- 6.5 Is any control device malfunctioning?
If yes, describe: _____ Yes No
- 6.6 Are control devices tested?
If yes, describe testing procedures: _____ Yes No
- 6.7 Are odors, fumes or dust observed from the facility?
If yes, describe: _____ Yes No
- GENERAL COMMENTS: _____

7.0 ADJACENT PROPERTY INFORMATION

- 7.1 Inquire about names and locations of current adjacent property owners or operators:
- 7.2 Inquire about the current use of the adjacent property(ies):
- a. Church
- b. Gym, asstd light industry
- c. _____
- d. _____
- 7.3 Ask about previous uses of the adjacent property(ies):
- a. Retail
- b. Asstd office
- c. Bio testing facility

SITE INTERVIEW QUESTIONNAIRE

d. _____

7.4 Does the adjacent property(ies) impact this facility? Yes No

a. If yes, describe: Parking exchange agreement

b. If yes, describe: _____

c. If yes, describe: _____

d. If yes, describe: _____

7.5 Is any of the adjacent property(ies) used for petroleum storage or delivery? Yes No

a. If yes, describe: _____

b. If yes, describe: _____

c. If yes, describe: _____

d. If yes, describe: _____

SITE INTERVIEW QUESTIONNAIRE

- 7.6 Is any of the adjacent property(ies) used for chemical manufacturing? Yes No
- a. If yes, describe: _____
- b. If yes, describe: _____
- c. If yes, describe: _____
- d. If yes, describe: _____

8.0 LANDOWNER LIABILITY PROTECTIONS (LLPs)

In order to qualify for one of the *Landowner Liability Protections (LLPs)*¹⁸⁷ offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"),¹⁸⁸ the *user* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *user* should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that "*all appropriate inquiries*" is not complete.

- 8.1 Environmental liens that are filed or recorded against the property (40 CFR 312.25). Did a search of recorded land title records (or judicial records where appropriate, see Note 1 Below) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?
- a. Federal Yes No If yes, describe: _____
- b. Tribal Yes No If yes, describe: _____
- c. State Yes No If yes, describe: _____
- d. Local Yes No If yes, describe: _____

Note 1: In certain jurisdictions, federal, tribal, state or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

- 8.2 Activities and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and (vi)). Did a search of recorded land title records (or judicial records where appropriate, see Note 1 in Section 8.1) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?
- a. Federal Yes No If yes, describe: _____
- b. Tribal Yes No If yes, describe: _____
- c. State Yes No If yes, describe: _____
- d. Local Yes No If yes, describe: _____

- 8.3 Specialized knowledge of experience of the person seeking to qualify for the LLP (40 CFR 312.28). Do you have any specialized knowledge of experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge if the chemicals and processes used by this type of business?
- Yes No If yes, describe: _____

- 8.4 Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this property reasonably reflect the fair market value of the property? Yes No If yes, describe: _____

SITE INTERVIEW QUESTIONNAIRE

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

Yes No If yes, describe: _____

8.5 Commonly known or reasonably ascertainable information about the property (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,

a. Do you know the past uses of the property?

Yes No If yes, describe: None, until Aiphone developed site.

b. Do you know of specific chemicals that are present or once were present at the property?

Yes No If yes, describe: Conformal coating, rubbing alcohol, general household cleaners.

c. Do you know of spills or other chemical releases that have taken place at the property?

Yes No If yes, describe: _____

d. Do you know of any environmental cleanups that have taken place at the property?

Yes No If yes, describe: _____

8.6 The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

Yes No If yes, describe: _____

GENERAL COMMENTS: _____

APPENDIX G
USER-PROVIDED INFORMATION

Phase I ESA User Questionnaire

Sound Transit East Link Parcel E340
EL297 King County Tax Parcel 2825059040
1700 130th Avenue NE, Bellevue, Washington

In order to qualify for one of the federal landowner liability protections and to enable us to fully address the objective of the Phase I ESA, please complete the questionnaire below and provide the additional information requested.

1. Are you aware of any environmental cleanup liens against the subject property that are filed or recorded under federal, tribal, state or local law?
 Yes No Don't Know If yes, describe: _____
2. Are you aware of any Activity and Use Limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded in a registry under federal, tribal, state or local law?
 Yes No Don't Know If yes, describe: _____
3. As the user of this Phase I ESA, do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?
 Yes No Don't Know If yes, describe: _____
4. Does the purchase price being paid for the subject property reasonable reflect the fair market value of the property?
 Yes No Don't Know If yes, describe: _____
 - a. If you conclude that there is a difference and you answered NO above, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?
 Yes No Don't Know If yes, describe: _____
5. Are you aware of commonly known or reasonably ascertainable information about the subject property that would help us identify conditions indicative of releases or threatened releases? For example:
 - a. Do you know the past uses of the property?
 Yes No Don't Know If yes, describe: _____
 - b. Do you know of specific chemicals that are present or once were present at the property?
 Yes No Don't Know If yes, describe: _____
 - c. Do you know of spills or other chemical releases that have taken place at the property?
 Yes No Don't Know If yes, describe: _____
 - d. Do you know of any environmental cleanups that have taken place at the property?
 Yes No Don't Know If yes, describe: _____
6. Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?
 Yes No Don't Know If yes, describe: _____

Phase I ESA User Questionnaire

Mark Menard / Sound Transit
User Questionnaire Completed by (Name and Organization)

October 21, 2014
Date

List of Requested Information, if available:

- Names and phone numbers of key individuals with knowledge of property use history.
- A map showing the boundaries of the subject property.
- Tax ID numbers for parcels included within the subject property.
- Copies of any past environmental site assessment and/or audit reports or risk assessment studies.
- Environmental permits.
- Registrations for underground and aboveground storage tanks (if any).
- Material safety data sheets for hazardous substances used or stored on-site (if any).
- Community right-to-know plans pertaining to the subject property.
- Safety plans pertaining to on-site facilities.
- Reports regarding geotechnical and/or hydrogeological conditions at or near the subject property.
- Notices or other correspondence from any governmental agency relating to past or current violations of environmental laws with respect to the subject property or relating to environmental liens encumbering the property.
- Recorded Activity Use Limitations (AULs).

APPENDIX H

**IMPORTANT INFORMATION ABOUT YOUR
ENVIRONMENTAL SITE ASSESSMENT/EVALUATION REPORT**

Date: June 30, 2015
To: Mr. Mark Menard
Sound Transit

IMPORTANT INFORMATION ABOUT YOUR ENVIRONMENTAL SITE ASSESSMENT/EVALUATION REPORT

ENVIRONMENTAL SITE ASSESSMENTS/EVALUATIONS ARE PERFORMED FOR SPECIFIC PURPOSES AND FOR SPECIFIC CLIENTS.

This report was prepared to meet the needs you specified with respect to your specific site and your risk management preferences. Unless indicated otherwise, we prepared your report expressly for you and for the purposes you indicated. No one other than you should use this report for any purpose without first conferring with us. No one is authorized to use this report for any purpose other than that originally contemplated without our prior written consent.

The findings and conclusions documented in this site assessment/evaluation have been prepared for specific application to this project and have been developed in a manner consistent with that level of care and skill normally exercised by members of the environmental science profession currently practicing under similar conditions in this area. The conclusions presented are based on interpretation of information currently available to us and are made within the operational scope, budget, and schedule constraints of this project. No warranty, express or implied, is made.

OUR REPORT IS BASED ON PROJECT-SPECIFIC FACTORS.

Our environmental site assessment is based on several factors and may include (but not be limited to): reviewing public documents to chronicle site ownership for the past 30, 40, or more years; investigating the site's regulatory history to learn about permits granted or citations issued; determining prior uses of the site and those adjacent to it; reviewing available topographic and real estate maps, historical aerial photos, geologic information, and hydrologic data; reviewing readily available published information about surface and subsurface conditions; reviewing federal and state lists of known and potentially contaminated sites; evaluating the potential for naturally occurring hazards; and interviewing public officials, owners/operators, and/or adjacent owners with respect to local concerns and environmental conditions.

Except as noted within the text of the report, no sampling or quantitative laboratory testing was performed by us as part of this site assessment. Where such analyses were conducted by an outside laboratory, Shannon & Wilson relied upon the data provided and did not conduct an independent evaluation regarding the reliability of the data.

CONDITIONS CAN CHANGE.

Site conditions, both surface and subsurface, may be affected as a result of natural processes or human influence. An environmental site assessment/evaluation is based on conditions that existed at the time of the evaluation. Because so many aspects of a historical review rely on third party information, most consultants will refuse to certify (warrant) that a site is free of contaminants, as it is impossible to know with absolute certainty if such a condition exists. Contaminants may be present in areas that were not surveyed or sampled, or may migrate to areas that showed no signs of contamination at the time they were studied.

Unless your consultant indicates otherwise, your report should not be construed to represent geotechnical subsurface conditions at or adjacent to the site and does not provide sufficient information for construction-related activities. Your report also should not be used following floods, earthquakes, or other acts of nature; if the size or configuration of the site is altered; if the location of the site is modified; or if there is a change of ownership and/or use of the property.

INCIDENTAL DAMAGE MAY OCCUR DURING SAMPLING ACTIVITIES.

Incidental damage to a facility may occur during sampling activities. Asbestos and lead-based paint sampling often require destructive sampling of pipe insulation, floor tile, walls, doors, ceiling tile, roofing, and other building materials. Shannon & Wilson does not provide for paint repair. Limited repair of asbestos sample locations are provided. However, Shannon & Wilson neither warrants repairs made by our field personnel, nor are we held liable for injuries or damages as a result of those repairs. If you desire a specific form of repair, such as those provided by a licensed roofing contractor, you need to request the specific repair at the time of the proposal. The owner is responsible for repair methods that are not specified in the proposal.

READ RESPONSIBILITY CLAUSES CAREFULLY.

Environmental site assessments/evaluations are less exact than other design disciplines because they are based extensively on judgment and opinion, and there may not have been any (or very limited) investigation of actual subsurface conditions. Wholly unwarranted claims have been lodged against consultants. To limit this exposure, consultants have developed a number of clauses for use in their contracts, reports, and other documents. These responsibility clauses are not exculpatory clauses designed to transfer the consultant's liabilities to other parties; rather, they are definitive clauses that identify where responsibilities begin and end. Their use helps all parties involved recognize their individual responsibilities and take appropriate action. Some of these definitive clauses may appear in this report, and you are encouraged to read them closely. Your consultant will be pleased to give full and frank answers to your questions.

Consultants cannot accept responsibility for problems that may develop if they are not consulted after factors considered in their reports have changed, or conditions at the site have changed. Therefore, it is incumbent upon you to notify your consultant of any factors that may have changed prior to submission of the final assessment/evaluation.

An assessment/evaluation of a site helps reduce your risk, but does not eliminate it. Even the most rigorous professional assessment may fail to identify all existing conditions.

ONE OF THE OBLIGATIONS OF YOUR CONSULTANT IS TO PROTECT THE SAFETY, HEALTH, PROPERTY, AND WELFARE OF THE PUBLIC.

If our environmental site assessment/evaluation discloses the existence of conditions that may endanger the safety, health, property, or welfare of the public, we may be obligated under rules of professional conduct, statutory law, or common law to notify you and others of these conditions.

PHASE II ENVIRONMENTAL SITE ASSESSMENT
SOUND TRANSIT RIGHT-OF-WAY #EL 296
ELUFA
1606 130TH AVENUE NE
BELLEVUE, WASHINGTON

1.0 INTRODUCTION

1.1 Authorization

Shannon & Wilson, Inc. (Shannon & Wilson) has completed a Phase II Environmental Site Assessment (ESA) to support acquisition of Sound Transit Parcel No. EL 296, 1606 130th Avenue NE, Bellevue, Washington. This assessment was conducted under Task Order 1 contract RTA/AE 0107-14(C) with Sound Transit. The task order was originally authorized by Mr. Kent Melton and Mr. Kevin Workman of Sound Transit on July 30, 2015.

1.2 Objective

The objective of our scope of services was to evaluate subsurface soil and groundwater at the site that may have been impacted by previous on- and off-site uses. The scope of services for the Phase II ESA included the following tasks:

- Soil and groundwater sampling and analysis.
- Preparation of this report.

The objective of this scope of services was to identify and evaluate environmental concerns with significant potential to result in contamination of the subject property. The sampling activities were a screening level effort to identify potential widespread contamination. The project purpose was not to define the lateral extent of potential soil and/or groundwater contamination.

2.0 SITE DESCRIPTION AND BACKGROUND

2.1 Site Description

The parcel is located along the E340 corridor, at 1606 130th Avenue NE, Bellevue, Washington (Figure 1). Sound Transit will be acquiring the EL 296 parcel for construction of the 130th Street Station and parking. The parcel is currently developed with at-grade parking and a commercial structure occupied by CrossFit 425, Grand Event Rentals, and The Wall Doctor, Inc.

2.2 Previous Studies/Adjacent Property Information

The Shannon & Wilson Team prepared a Phase I ESA for the parcel (Shannon & Wilson Team, 2015). The resulting recognized environmental conditions identified included:

- Improper storage and disposal of hazardous waste (within the Wall Doctor, Inc. Space).
- Potential for contamination related to removal of an underground storage tank from the adjacent northeast parcel (EL 297.1). Soil sampling indicated tank closures has been completed; however, no groundwater data was available.

Adjacent to the east is parcel EL 299. A no further action designation and restrictive covenant relating to remaining soil contamination located beneath the existing building are in place on this parcel. Previously, testing indicated contaminant concentrations in groundwater did not exceed regulatory criteria.

Adjacent to the west, across 130th Avenue NE, is parcel EL 290. It has been occupied by a concrete batch plant as early as 1956. Excavation and off-site disposal were completed in 1998 relating to releases from tanks. Diesel concentrations in groundwater were below regulatory criteria.

3.0 SITE GEOLOGY AND HYDROGEOLOGY

This section describes the general geologic setting of the site and discusses the subsurface conditions beneath the site and surrounding area as they relate to the potential for contamination to migrate through the soils and groundwater. The geologic and hydrogeologic summaries below are based on environmental explorations conducted at the site.

3.1 Geology

Site soil generally consisted of poorly graded sand with silt and gravel to poorly graded gravel with silt and sand from ground surface to roughly 10 feet below ground surface (bgs). Site soil from roughly 10 to 20 feet bgs generally consists of silty sand with gravel to poorly graded sand with silt. Gravel interbeds were observed from 7 to 15 feet bgs. Dark brown organic soil was observed just above the soil-water interface at 11 feet bgs at EL 296-2 (Figure 1). Glacial recessional outwash (Qvro) soil was encountered below approximately 10 feet bgs in EL296-1, EL296-2, EL296-3, and EL296-4.

Several explorations were completed in the site vicinity by subcontracted geotechnical consultants developing design documents for the alignment (B-D-130ST-1P, E340-B-019, E340-B-023, and E340-B-024). Similar geology was observed in the borings and no field indication of contamination were noted in the exploration logs (H-J-H Final Design Partners, 2014).

3.2 Hydrogeology

Site groundwater was encountered at varying depths. Groundwater was observed at approximately 6, 11, 17, and 13 feet bgs at EL296-1, EL296-2, EL296-3, and EL296-4, respectively. Good groundwater recovery was observed during groundwater sampling.

Based on site topography, studies completed in the vicinity of EL 296 (Shannon & Wilson Team, 2015), and depths to groundwater in the geoprobes, perched groundwater flow direction was estimated to the south-southwest.

4.0 FIELD EXPLORATIONS

4.1 Geoprobe Advancement and Sampling

On September 2, 2015, Shannon & Wilson observed advancement of four geoprobes at the site. ESN Northwest conducted the geoprobe advancement under subcontract to Shannon & Wilson. Geoprobes were designated EL296-1 through EL296-4 (Figure 1). Geoprobes were advanced 10 to 20 feet bgs.

Soil grab samples were collected from each of the four geoprobe samples. The soil grab samples were collected just above the soil-water interface or at potential field indications of contamination. Soil discoloration indicating the possibility of contamination was observed at 10 feet bgs at geoprobes EL296-3 and EL296-4. The soil samples were collected at depths of 5, 10, 10, and 10 feet bgs at EL296-1, EL296-2, EL296-3, and EL296-4, respectively.

Groundwater samples were also collected at each geoprobe. Temporary 1-inch-diameter polyvinyl chloride sampling wells were installed at each of the four geoprobe locations. Groundwater samples were collected after purging groundwater for approximately one minute. Groundwater samples were collected at depths of 10, 15, 18, and 14 feet bgs at EL296-1, EL296-2, EL296-3, and EL296-4, respectively. The temporary wells were removed following sampling.

A total of four soil and four groundwater samples were collected and submitted to the contract laboratory for analytical testing. Field methodology, observations and geoprobe logs are presented in Appendix A.

4.2 Analytical Methods and Results

Soil and groundwater analysis were performed by Onsite Environmental under subcontract to Shannon & Wilson. Table 1 summarizes the field exploration and analytical testing. Table 2 summarizes soil analytical results and compares the data to Washington Model Toxics Control Act (MTCA) Method A unrestricted use cleanup criteria (Washington State Department of Ecology, 2013). Table 3 summarizes groundwater analytical results and compares the data to MTCA Method A cleanup criteria. Follow up polychlorinated biphenyl (PCB) and polynuclear aromatic hydrocarbon (PAH) analysis were requested at geoprobes EL296-1 and EL296-3 due to the presence of oil-range petroleum hydrocarbons in soil. Table 4 presents a soil toxicity equivalency factor (TEF) table for carcinogenic PAHs. Analytical laboratory reports are presented in Appendix B.

4.2.1 Quality Assurance/Quality Control (QA/QC)

Laboratory QA/QC procedures included analyzing surrogate recoveries, method blanks, laboratory control sample recoveries, matrix spike recoveries, and duplicates. Equipment and/or field blanks were not specified for this project. Some QA/QC issues were noted by Onsite Environmental and flagged in their report.

4.2.2 Soil Results

In soil, the following notable analytical results were observed:

- Gasoline-range petroleum hydrocarbons were detected in soil below the MTCA Method A cleanup criteria at geoprobe EL296-3.
- Lube oil-range petroleum hydrocarbons were detected in soil below the MTCA Method A cleanup criteria in the samples collected from EL296-1 and EL296-3.
- Diesel-range petroleum hydrocarbons were detected in soil below MTCA Method A cleanup criteria at geoprobe EL296-1.
- The chromatogram for soil sample EL296-3 is similar to turpentine.
- VOCs were detected in soil below their MTCA Method A cleanup criteria.
- Metals (barium, chromium, copper, lead, nickel, and zinc) were detected in soil below their respective MTCA Method A cleanup criteria.

- PCBs were not detected in soil in the follow up analysis at EL296-1 and EL296-3.
- PAHs were detected in soil in the follow up analysis at EL296-1 and EL296-3. The TEF adjusted results for carcinogenic PAHs are below the MTCA Method A cleanup criteria.

4.2.3 Groundwater Results

In groundwater, the following notable analytical results were observed:

- No petroleum hydrocarbons were detected in any of the groundwater samples.
- VOCs were detected in groundwater below their MTCA Method A cleanup criteria.
- Total metals (arsenic, chromium, and lead) were detected and exceeded MTCA cleanup criteria for groundwater at geoprobe EL296-4. Total metals (chromium and lead) were detected in groundwater below MTCA cleanup criteria at geoprobe EL 296-3.
- Dissolved metals were not detected in groundwater at EL296-1 or EL296-2.
- Groundwater pH levels were measured to be 7.0 at EL296-2 and EL296-3.

4.3 Investigation-Derived Waste (IDW)

IDW generated during sampling included soil cuttings, decontamination fluids, purge water, used personal protection equipment (PPE), and disposable sampling equipment. Soil cuttings, decontamination fluids, and purge water were contained in a labeled Washington State Department of Transportation-approved 16-gallon drum and temporarily stored in the northeast corner of the site pending offsite disposal. PPE and disposable sampling equipment was placed in a plastic bag and disposed as solid waste by ESN Northwest.

5.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the analytical results we offer the following:

- Contaminants are present in site soil at concentrations below their respective MTCA Method A criteria.
- The source of the turpentine detected in soil sample EL296-3 (collected above the water table) is not known. These detections may have resulted from a surface spill or could be related to placement of fill on site.
- Contaminants are present in site groundwater at concentrations above and below their respective MTCA Method A criteria.

- Metals concentrations in groundwater are higher in total than in dissolved analysis. Geoprobe sampling is a dynamic technique, and may cause elevated turbidity that can affect laboratory sampling results. It appears the exceedances are related to turbidity.
- Elevated total groundwater arsenic concentrations are likely naturally occurring because organic-rich soils are present on site. In reducing environments, arsenic tends to precipitate resulting in a concentration of arsenic over time that also impacts local groundwater.
- If site soil or groundwater will be generated, site workers should be informed of the potential exposure to these contaminants during construction. While contaminant concentrations do not exceed a regulatory criteria, soil and/or groundwater may require special handling for offsite disposal.
- Total and dissolved metals analytical laboratory testing were completed and may provide an understanding of potential water quality during dewatering. Specifically, turbidity management will likely be required prior to discharge of water from the site.

6.0 LIMITATIONS

Within the limitations of scope, schedule, and budget, Shannon & Wilson has prepared this report in a professional manner, using the level of skill and care normally exercised for similar projects under similar conditions by reputable and competent environmental consultants currently practicing in this area.

The scope of services was intended to address only those environmental concerns with significant potential to result in contamination of the site. The sampling effort was considered limited in extent and served as a screening effort only. It was not intended to define the lateral or vertical extent of soil and/or groundwater contamination.

The data presented in this report are based on limited research and sampling at the site and should be considered representative at the time of our observations. Other areas of contamination that were not obvious during our site work could be present at the site. Shannon & Wilson is not responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the report was prepared. We also note that the facts and conditions referenced in this report may change over time, and that the conclusions and recommendations set forth here are applicable to the facts and conditions as described only at the time of this report. Shannon & Wilson believes that the conclusions stated here are factual. No guarantee is made or implied.

This report was prepared for the exclusive use of Sound Transit and their representatives, and in no way guarantees that any agency or its staff will reach the same conclusions as Shannon &

Wilson. To help you and others in understanding the limitations of our report, Shannon & Wilson has prepared Appendix C, "Important Information About Your Geotechnical/ Environmental Report."

APPENDIX A

FIELD METHODS AND GEOPROBE LOGS

The project consisted of performing subsurface environmental sampling to support acquisition of Sound Transit Parcel No. EL296, located at 1606 130th Avenue NE, Bellevue, Washington. The investigation and analysis re intended to assess quality of soil and groundwater that is present in the subsurface.

Standard investigation methods, including sample collection, field screening, documentation procedures, and selected analyses, are described briefly in the following subsections. Sample collection and documentation were completed in accordance with Shannon & Wilson's standard operating procedures.

A-1 PRE-SAMPLING ACTIVITIES

Shannon & Wilson, Inc. (Shannon & Wilson) coordinated with Sound Transit Community Outreach to gain access to the site. A representative of Shannon & Wilson notified the Underground Utilities Location Center (1-800-424-5555) at least 48 hours before the start of subsurface work at the site. Applied Professional Services surveyed the area within 30 feet of each geoprobe location for utilities.

A-2 SAMPLE COLLECTION

During the field investigation, soil and groundwater samples were collected to evaluate the potential for site contamination. The various methods of collecting samples are presented below. Sample handling procedures are summarized in Section A.3. The samples were submitted to OnSite Environmental, Inc. of Redmond, Washington, laboratory for analysis by the methods discussed in Section A.5. Decontamination procedures are presented in Section A.6.

A.2.1 Hydraulic Probe Rig Drilling

A direct push hydraulic probe rig was used to collect subsurface soil and groundwater samples. The probe was advanced to the depth described in the proposal for this project. One soil sample was collected at the soil water interface and one groundwater sample was collected below the soil water interface. The soil water interface is the minimum depth at which the soil is in contact with groundwater. Logs for the Shannon & Wilson geoprobes are included as Figures A-2 through A-5.

A.2.2 Temporary Well Installation

Temporary wells were installed to collect groundwater samples. The well depths were chosen based on the depth of observed groundwater. The temporary wells were constructed of 1-inch-diameter, Schedule 40 polyvinyl chloride pipe and no sand pack was placed around the pipe. After the temporary wells were installed they were purged for approximately one minute prior to groundwater sampling.

A.2.3 Soil Sampling

Soil was visually described using Shannon & Wilson's soil classification procedure, which is a modified version of the Unified Soil Classification System. The soil descriptions were recorded on geoprobe field logs. When a soil sample was selected for chemical analysis, the soil sample was placed into laboratory-supplied glassware using disposable, stainless steel spoons or disposable plastic syringes.

A.2.4 Groundwater Sampling

One groundwater sample from each probe location was collected using a peristaltic pump to extract water from the temporary well. After the samples were collected, the temporary wells were removed and probe holes were backfilled with bentonite chips and patched with a cold asphalt patch.

A-3 SAMPLE HANDLING

Environmental samples were collected using disposable sampling equipment. New nitrile gloves were worn by the sample handler during collection of each sample. Non-disposable sampling equipment was decontaminated between sample locations to reduce potential for cross contamination. Field notes documented site conditions and sample collection activities.

Samples collected for laboratory analysis were placed into pre-cleaned laboratory provided glassware and containerized sequentially, with the most volatile target analyte collected first. The preferred collection order for some of the more common analytes is: (a) volatile organics and petroleum, (b) semi-volatile organics, and (c) metals. The sample container labels were completed using indelible ink. The samples were sealed in plastic bags, and then placed into a cooler and maintained at 4 degrees Celsius ($^{\circ}\text{C}$) ($\pm 2^{\circ}\text{C}$) with "blue ice."

Sample information was recorded on chain-of-custody forms, and these forms accompanied the samples to the laboratory. Samples were maintained under chain-of-custody until delivered to the analytical laboratory, OnSite Environmental, Inc. of Redmond, Washington.

A-4 FIELD SCREENING METHODS

Field screening of geoprobe samples helped evaluate the potential presence of contamination. Typically, at a nonhazardous waste site, the most likely locations to encounter contamination are in fill, at the water table interface, in the water table smear (fluctuation) zone, at fill/native soil contacts, and at pronounced changes in permeability. However, the location of contamination, if any, is site dependent.

Field screening methods typically consisted of:

- Photoionization detector (PID) measurements
- Visual observations
- Olfactory observations

All three methods were used for the site. New nitrile gloves were worn by the field personnel during the screening.

A.4.1 Photoionization Detector (PID) Measurements

PID measurements were collected on soil samples to screen for volatile organic vapors such as gasoline and solvents. Typically, decaying organics can elevate PID measurements and diesel and oil can rarely be detected with the PID. PID measurements were obtained by passing the instrument directly over the soil or by performing a headspace measurement.

Headspace measurements were used to confirm low PID readings or to check for low volatility contaminants such as old petroleum products:

- Place an amount of soil into a Ziploc™ bag.
- Place the bag in a warm environment.
- Wait a consistent amount of time for the soil to reach “ambient” conditions (usually 15 minutes).
- Insert the tip of the PID into a very small slit in the bag.
- Take a PID reading and record the data.

A.4.2 Visual Observation

Visual observations of soil samples and cuttings were recorded in the boring log or in the field logbook. Indications of contamination include:

- Black tarry substances
- Oily or shiny soil
- Metallic flakes
- Free product petroleum or organic hydrocarbons
- Gray, pink, red, or black discolorations

A.4.3 Odors

Unusual odors were recorded when noted during drilling or sampling. Soil was not intentionally smelled for contamination. Soil was not tasted for classification purposes.

A.4.4 Field-screening Documentation

During screening, the following items were recorded:

- Type of measurement/observation
- Depth
- Time of measurement or observation
- Possible source
- Description of odor (petroleum, decaying organics, creosote, cedar, etc.)

A-5 ANALYTICAL METHODS

Soil samples were analyzed for one or more of the following methods:

- Gasoline-range petroleum hydrocarbons using Method Northwest Total Petroleum Hydrocarbon (NWTPH) gasoline-range extended (Gx);
- Diesel- and oil-range petroleum hydrocarbons using Method NWTPH diesel-range extended (Dx);
- Volatile organic compounds (VOCs) by U.S. Environmental Protection Agency (EPA) Method 8260C;
- Resource Conservation and Recovery Act-8 metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver) plus copper, nickel and zinc by EPA Method 6010C/7471B series;
- Follow-up analysis for polychlorinated biphenyls by EPA Method 8082A were conducted on soil samples with detection of oil-range petroleum hydrocarbons.

- Follow-up analysis for polycyclic aromatic hydrocarbons by EPA Method 8070D/SIM were conducted on soil samples with detection of oil-range petroleum hydrocarbons.

Groundwater samples were analyzed by the following methods:

- Gasoline-range petroleum hydrocarbons using Method NWTPH-Gx;
- Diesel- and oil-range petroleum hydrocarbons using Method NWTPH-Dx;
- Total or dissolved RCRA-8 metals by EPA Method 6000/7000 series;
- VOCs by EPA Method 8260C; and
- pH by Standard Method 4500-H B.

A-6 DECONTAMINATION METHODS

The primary objective of the decontamination process is to reduce the potential for the accidental introduction of contaminants to non-contaminated areas or samples. This section describes the methods associated with decontamination of field equipment.

A.6.1 Direct Push Probe

Equipment used during soil activities was steam cleaned prior to use. Following decontamination, caution was taken to keep the equipment off the ground by placing the equipment on clean, plastic sheeting or equivalent.

The probe subcontractor provided a sufficient amount of direct push equipment and samplers to conduct the project without decontaminating between locations. The associated direct push equipment and samplers were decontaminated at the site at the end of sampling activities.

A.6.2 Sampling Equipment

Groundwater and soil sampling equipment was cleaned prior to and at the completion of each probe location. Wherever possible, sampling equipment was dedicated to a single location to reduce potential cross contamination. Other non-dedicated sampling equipment used during the field activities was decontaminated as follows:

- Remove gross contamination and particulate matter.
- Wash thoroughly with Alconox™, or similar non-phosphate detergent plus tap water or designated decontamination water supply source.
- Rinse equipment thoroughly with distilled or deionized water.

A-7 INVESTIGATION-DERIVED WASTE (IDW)

IDW is waste generated during sampling activities. IDW that was generated during these sampling activities included soil cuttings and purge water. The soil cuttings, purge water and decontamination water were placed into a steel drum and temporarily stored in the north east corner of the site pending receipt of analytical results.

Miscellaneous IDW consisted of used personal protective equipment (PPE); disposable sampling equipment (spoons, tubing, etc.); and other wastes that originated from site activities. This IDW was placed in doubled, heavy-duty plastic bags. The waste PPE and disposable sampling equipment was disposed of in a dumpster at the probing subcontractor's facility.

Shannon & Wilson, Inc. (S&W), uses a soil identification system modified from the Unified Soil Classification System (USCS). Elements of the USCS and other definitions are provided on this and the following pages. Soil descriptions are based on visual-manual procedures (ASTM D2488) and laboratory testing procedures (ASTM D2487), if performed.

S&W INORGANIC SOIL CONSTITUENT DEFINITIONS

CONSTITUENT ²	FINE-GRAINED SOILS (50% or more fines) ¹	COARSE-GRAINED SOILS (less than 50% fines) ¹
Major	<i>Silt, Lean Clay, Elastic Silt, or Fat Clay</i> ³	<i>Sand or Gravel</i> ⁴
Modifying (Secondary) Precedes major constituent	30% or more coarse-grained: <i>Sandy or Gravelly</i> ⁴	More than 12% fine-grained: <i>Silty or Clayey</i> ³
Minor Follows major constituent	15% to 30% coarse-grained: <i>with Sand or with Gravel</i> ⁴ 30% or more total coarse-grained and lesser coarse-grained constituent is 15% or more: <i>with Sand or with Gravel</i> ⁵	5% to 12% fine-grained: <i>with Silt or with Clay</i> ³ 15% or more of a second coarse-grained constituent: <i>with Sand or with Gravel</i> ⁵

¹All percentages are by weight of total specimen passing a 3-inch sieve.
²The order of terms is: *Modifying Major with Minor*.
³Determined based on behavior.
⁴Determined based on which constituent comprises a larger percentage.
⁵Whichever is the lesser constituent.

MOISTURE CONTENT TERMS

Dry	Absence of moisture, dusty, dry to the touch
Moist	Damp but no visible water
Wet	Visible free water, from below water table

STANDARD PENETRATION TEST (SPT) SPECIFICATIONS

Hammer:	140 pounds with a 30-inch free fall. Rope on 6- to 10-inch-diam. cathead 2-1/4 rope turns, > 100 rpm
	NOTE: If automatic hammers are used, blow counts shown on boring logs should be adjusted to account for efficiency of hammer.
Sampler:	10 to 30 inches long Shoe I.D. = 1.375 inches Barrel I.D. = 1.5 inches Barrel O.D. = 2 inches
N-Value:	Sum blow counts for second and third 6-inch increments. Refusal: 50 blows for 6 inches or less; 10 blows for 0 inches.
	NOTE: Penetration resistances (N-values) shown on boring logs are as recorded in the field and have not been corrected for hammer efficiency, overburden, or other factors.

PARTICLE SIZE DEFINITIONS

DESCRIPTION	SIEVE NUMBER AND/OR APPROXIMATE SIZE
FINES	< #200 (0.075 mm = 0.003 in.)
SAND Fine Medium Coarse	#200 to #40 (0.075 to 0.4 mm; 0.003 to 0.02 in.) #40 to #10 (0.4 to 2 mm; 0.02 to 0.08 in.) #10 to #4 (2 to 4.75 mm; 0.08 to 0.187 in.)
GRAVEL Fine Coarse	#4 to 3/4 in. (4.75 to 19 mm; 0.187 to 0.75 in.) 3/4 to 3 in. (19 to 76 mm)
COBBLES	3 to 12 in. (76 to 305 mm)
BOULDERS	> 12 in. (305 mm)

RELATIVE DENSITY / CONSISTENCY

COHESIONLESS SOILS		COHESIVE SOILS	
N, SPT, BLOWS/FT.	RELATIVE DENSITY	N, SPT, BLOWS/FT.	RELATIVE CONSISTENCY
< 4	Very loose	< 2	Very soft
4 - 10	Loose	2 - 4	Soft
10 - 30	Medium dense	4 - 8	Medium stiff
30 - 50	Dense	8 - 15	Stiff
> 50	Very dense	15 - 30	Very stiff
		> 30	Hard

WELL AND BACKFILL SYMBOLS

	Bentonite Cement Grout		Surface Cement Seal
	Bentonite Grout		Asphalt or Cap
	Bentonite Chips		Slough
	Silica Sand		Inclinometer or Non-perforated Casing
	Perforated or Screened Casing		Vibrating Wire Piezometer

PERCENTAGES TERMS^{1, 2}

Trace	< 5%
Few	5 to 10%
Little	15 to 25%
Some	30 to 45%
Mostly	50 to 100%

¹Gravel, sand, and fines estimated by mass. Other constituents, such as organics, cobbles, and boulders, estimated by volume.

SHANNON & WILSON, INC.
Geotechnical and Environmental Consultants

FIG. A-1
Sheet 1 of 3

UNIFIED SOIL CLASSIFICATION SYSTEM (USCS)
 (Modified From USACE Tech Memo 3-357, ASTM D2487, and ASTM D2488)

MAJOR DIVISIONS			GROUP/GRAPHIC SYMBOL	TYPICAL IDENTIFICATIONS	
COARSE-GRAINED SOILS (more than 50% retained on No. 200 sieve)	Gravels (more than 50% of coarse fraction retained on No. 4 sieve)	Gravel (less than 5% fines)	GW		Well-Graded Gravel; Well-Graded Gravel with Sand
			GP		Poorly Graded Gravel; Poorly Graded Gravel with Sand
		Silty or Clayey Gravel (more than 12% fines)	GM		Silty Gravel; Silty Gravel with Sand
			GC		Clayey Gravel; Clayey Gravel with Sand
	Sands (50% or more of coarse fraction passes the No. 4 sieve)	Sand (less than 5% fines)	SW		Well-Graded Sand; Well-Graded Sand with Gravel
			SP		Poorly Graded Sand; Poorly Graded Sand with Gravel
		Silty or Clayey Sand (more than 12% fines)	SM		Silty Sand; Silty Sand with Gravel
			SC		Clayey Sand; Clayey Sand with Gravel
FINE-GRAINED SOILS (50% or more passes the No. 200 sieve)	Silt and Clays (liquid limit less than 50)	Inorganic	ML		Silt; Silt with Sand or Gravel; Sandy or Gravelly Silt
			CL		Lean Clay; Lean Clay with Sand or Gravel; Sandy or Gravelly Lean Clay
		Organic	OL		Organic Silt or Clay; Organic Silt or Clay with Sand or Gravel; Sandy or Gravelly Organic Silt or Clay
	Silt and Clays (liquid limit 50 or more)	Inorganic	MH		Elastic Silt; Elastic Silt with Sand or Gravel; Sandy or Gravelly Elastic Silt
			CH		Fat Clay; Fat Clay with Sand or Gravel; Sandy or Gravelly Fat Clay
		Organic	OH		Organic Silt or Clay; Organic Silt or Clay with Sand or Gravel; Sandy or Gravelly Organic Silt or Clay
HIGHLY-ORGANIC SOILS	Primarily organic matter, dark in color, and organic odor		PT		Peat or other highly organic soils (see ASTM D4427)

NOTE: No. 4 size = 4.75 mm = 0.187 in.; No. 200 size = 0.075 mm = 0.003 in.

NOTES

- Dual symbols (symbols separated by a hyphen, i.e., SP-SM, Sand with Silt) are used for soils with between 5% and 12% fines or when the liquid limit and plasticity index values plot in the CL-ML area of the plasticity chart. Graphics shown on the logs for these soil types are a combination of the two graphic symbols (e.g., SP and SM).
- Borderline symbols (symbols separated by a slash, i.e., CL/ML, Lean Clay to Silt; SP-SM/SM, Sand with Silt to Silty Sand) indicate that the soil properties are close to the defining boundary between two groups.

FIG. A-1
Sheet 2 of 3

GRADATION TERMS

Poorly Graded	Narrow range of grain sizes present or, within the range of grain sizes present, one or more sizes are missing (Gap Graded). Meets criteria in ASTM D2487, if tested.
Well-Graded	Full range and even distribution of grain sizes present. Meets criteria in ASTM D2487, if tested.

CEMENTATION TERMS¹

Weak	Crumbles or breaks with handling or slight finger pressure.
Moderate	Crumbles or breaks with considerable finger pressure.
Strong	Will not crumble or break with finger pressure.

PLASTICITY²

DESCRIPTION	VISUAL-MANUAL CRITERIA	APPROX. PLASTICITY INDEX RANGE
Nonplastic	A 1/8-in. thread cannot be rolled at any water content.	< 4
Low	A thread can barely be rolled and a lump cannot be formed when drier than the plastic limit.	4 to 10
Medium	A thread is easy to roll and not much time is required to reach the plastic limit. The thread cannot be rerolled after reaching the plastic limit. A lump crumbles when drier than the plastic limit.	10 to 20
High	It takes considerable time rolling and kneading to reach the plastic limit. A thread can be rerolled several times after reaching the plastic limit. A lump can be formed without crumbling when drier than the plastic limit.	> 20

ADDITIONAL TERMS

Mottled	Irregular patches of different colors.
Bioturbated	Soil disturbance or mixing by plants or animals.
Diamict	Nonsorted sediment; sand and gravel in silt and/or clay matrix.
Cuttings	Material brought to surface by drilling.
Slough	Material that caved from sides of borehole.
Sheared	Disturbed texture, mix of strengths.

PARTICLE ANGULARITY AND SHAPE TERMS¹

Angular	Sharp edges and unpolished planar surfaces.
Subangular	Similar to angular, but with rounded edges.
Subrounded	Nearly planar sides with well-rounded edges.
Rounded	Smoothly curved sides with no edges.
Flat	Width/thickness ratio > 3.
Elongated	Length/width ratio > 3.

ACRONYMS AND ABBREVIATIONS

ATD	At Time of Drilling
Diam.	Diameter
Elev.	Elevation
ft.	Feet
FeO	Iron Oxide
gal.	Gallons
Horiz.	Horizontal
HSA	Hollow Stem Auger
I.D.	Inside Diameter
in.	Inches
lbs.	Pounds
MgO	Magnesium Oxide
mm	Millimeter
MnO	Manganese Oxide
NA	Not Applicable or Not Available
NP	Nonplastic
O.D.	Outside Diameter
OW	Observation Well
pcf	Pounds per Cubic Foot
PID	Photo-Ionization Detector
PMT	Pressuremeter Test
ppm	Parts per Million
psi	Pounds per Square Inch
PVC	Polyvinyl Chloride
rpm	Rotations per Minute
SPT	Standard Penetration Test
USCS	Unified Soil Classification System
q _u	Unconfined Compressive Strength
WVP	Vibrating Wire Piezometer
Vert.	Vertical
WOH	Weight of Hammer
WOR	Weight of Rods
Wt.	Weight

STRUCTURE TERMS¹

Interbedded	Alternating layers of varying material or color with layers at least 1/4-inch thick; singular: bed.
Laminated	Alternating layers of varying material or color with layers less than 1/4-inch thick; singular: lamination.
Fissured	Breaks along definite planes or fractures with little resistance.
Slickensided	Fracture planes appear polished or glossy; sometimes striated.
Blocky	Cohesive soil that can be broken down into small angular lumps that resist further breakdown.
Lensed	Inclusion of small pockets of different soils, such as small lenses of sand scattered through a mass of clay.
Homogeneous	Same color and appearance throughout.

Total Depth (ft)	15.0	Drilling Company:	ESN Northwest	Hole Diameter:	2 inches

Depth (ft)	Probe Run	Soil Description	Depth, ft.	Symbol	PID, ppm	Ground Water	Sample Number, Description, and Results	Depth (ft)
	1	Asphalt.	0.2					
		Gray to brown, Poorly Graded Gravel with Silt and Sand (GP-GM); moist; fine to coarse sand and gravel. Fill (Hf)			0			
	2	Brown, Silty Sand with Gravel (SM); moist; fine to coarse sand and gravel. Fill (Hf)	5.0		0			5
	3	Brown, Poorly Graded Sand with Silt and Gravel (SP-SM); moist to wet; fine to coarse sand and gravel. Recessional Outwash (Qvro)	10.0		0		EL296-4 Soil	10
		BOTTOM OF BORING COMPLETED 09/02/2015	15.0			During Drilling	EL296-4 Groundwater	15

Typ: Rev: Log:

NOTES

1. In some cases where recovery was low in the upper part of the run, the soil sample may have slid down in the tube prior to removal from the ground.
2. Groundwater level, if indicated above, was estimated during probing and should be considered approximate.
3. Refer to KEY for definitions and explanation of symbols.
4. CT = corrosion test sample; TR = thermal resistivity sample; EN = environmental sample; GE = geotechnical sample; AR = archeological sample.

Re: Analytical Data for Project 21-1-16700-001
Laboratory Reference No. 1509-030

Dear Zach:

Enclosed are the analytical results and associated quality control data for samples submitted on September 2, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal stroke extending to the right.

David Baumeister
Project Manager

Enclosures

Date of Report: September 11, 2015
Samples Submitted: September 2, 2015
Laboratory Reference: 1509-030
Project: 21-1-16700-001

Case Narrative

Samples were collected on September 2, 2015 and received by the laboratory on September 2, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

NWTPH Gx (soil) Analysis

Per EPA Method 5035A, samples were received by the laboratory in pre-weighed 40 mL VOA vials within 48 hours of sample collection. They were stored in a freezer at between -7°C and -20°C until extraction or analysis.

The chromatogram for sample EL296-3 (SOIL) is similar to turpentine.

Volatiles EPA 8260C (soil) Analysis

Per EPA Method 5035A, samples were received by the laboratory in pre-weighed 40 mL VOA vials within 48 hours of sample collection. They were stored in a freezer at between -7°C and -20°C until extraction or analysis.

The Method 5035A VOA vials provided contained too much soil to be analyzed by low-level Method 8260C. The samples were therefore extracted from 8-ounce jars and analyzed. Some loss of volatiles may have occurred.

Please note that any other QA/QC issues associated with these extractions and analyses will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
 - B - The analyte indicated was also found in the blank sample.
 - C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
 - E - The value reported exceeds the quantitation range and is an estimate.
 - F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
 - H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
 - I - Compound recovery is outside of the control limits.
 - J - The value reported was below the practical quantitation limit. The value is an estimate.
 - K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
 - L - The RPD is outside of the control limits.
 - M - Hydrocarbons in the gasoline range are impacting the diesel range result.
 - M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
 - N - Hydrocarbons in the lube oil range are impacting the diesel range result.
 - N1 - Hydrocarbons in diesel range are impacting lube oil range results.
 - O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
 - P - The RPD of the detected concentrations between the two columns is greater than 40.
 - Q - Surrogate recovery is outside of the control limits.
 - S - Surrogate recovery data is not available due to the necessary dilution of the sample.
 - T - The sample chromatogram is not similar to a typical _____.
 - U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
 - U1 - The practical quantitation limit is elevated due to interferences present in the sample.
 - V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
 - W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
 - X - Sample extract treated with a mercury cleanup procedure.
 - X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
 - Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
 - Z - The sample chromatogram is similar to turpentine.
- ND - Not Detected at PQL
 PQL - Practical Quantitation Limit
 RPD - Relative Percent Difference

Re: Analytical Data for Project 21-1-16700-001
Laboratory Reference No. 1509-030B

Dear Zach:

Enclosed are the analytical results and associated quality control data for samples submitted on September 2, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal stroke extending to the right.

David Baumeister
Project Manager

Enclosures

Date of Report: September 21, 2015
Samples Submitted: September 2, 2015
Laboratory Reference: 1509-030B
Project: 21-1-16700-001

Case Narrative

Samples were collected on September 2, 2015 and received by the laboratory on September 2, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
- B - The analyte indicated was also found in the blank sample.
- C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
- E - The value reported exceeds the quantitation range and is an estimate.
- F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
- H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
- I - Compound recovery is outside of the control limits.
- J - The value reported was below the practical quantitation limit. The value is an estimate.
- K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
- L - The RPD is outside of the control limits.
- M - Hydrocarbons in the gasoline range are impacting the diesel range result.
- M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
- N - Hydrocarbons in the lube oil range are impacting the diesel range result.
- N1 - Hydrocarbons in diesel range are impacting lube oil range results.
- O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
- P - The RPD of the detected concentrations between the two columns is greater than 40.
- Q - Surrogate recovery is outside of the control limits.
- S - Surrogate recovery data is not available due to the necessary dilution of the sample.
- T - The sample chromatogram is not similar to a typical _____.
- U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- U1 - The practical quantitation limit is elevated due to interferences present in the sample.
- V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
- W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
- X - Sample extract treated with a mercury cleanup procedure.
- X1 - Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.
- Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
- Z -
- ND - Not Detected at PQL
- PQL - Practical Quantitation Limit
- RPD - Relative Percent Difference

Re: Analytical Data for Project 21-1-16700-001
Laboratory Reference No. 1509-030C

Dear Zach:

Enclosed are the analytical results and associated quality control data for samples submitted on September 2, 2015.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal stroke extending to the right.

David Baumeister
Project Manager

Enclosures

Date of Report: September 28, 2015
Samples Submitted: September 2, 2015
Laboratory Reference: 1509-030C
Project: 21-1-16700-001

Case Narrative

Samples were collected on September 2, 2015 and received by the laboratory on September 2, 2015. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

PAHs EPA 8270D/SIM Analysis

Holding time was exceeded.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

APPENDIX C

**IMPORTANT INFORMATION ABOUT
YOUR GEOTECHNICAL/ENVIRONMENTAL REPORT**

Date: October 9, 2015
To: Sound Transit
Attn: Mr. Mark Menard

IMPORTANT INFORMATION ABOUT YOUR GEOTECHNICAL/ENVIRONMENTAL REPORT

CONSULTING SERVICES ARE PERFORMED FOR SPECIFIC PURPOSES AND FOR SPECIFIC CLIENTS.

Consultants prepare reports to meet the specific needs of specific individuals. A report prepared for a civil engineer may not be adequate for a construction contractor or even another civil engineer. Unless indicated otherwise, your consultant prepared your report expressly for you and expressly for the purposes you indicated. No one other than you should apply this report for its intended purpose without first conferring with the consultant. No party should apply this report for any purpose other than that originally contemplated without first conferring with the consultant.

THE CONSULTANT'S REPORT IS BASED ON PROJECT-SPECIFIC FACTORS.

A geotechnical/environmental report is based on a subsurface exploration plan designed to consider a unique set of project-specific factors. Depending on the project, these may include: the general nature of the structure and property involved; its size and configuration; its historical use and practice; the location of the structure on the site and its orientation; other improvements such as access roads, parking lots, and underground utilities; and the additional risk created by scope-of-service limitations imposed by the client. To help avoid costly problems, ask the consultant to evaluate how any factors that change subsequent to the date of the report may affect the recommendations. Unless your consultant indicates otherwise, your report should not be used: (1) when the nature of the proposed project is changed (for example, if an office building will be erected instead of a parking garage, or if a refrigerated warehouse will be built instead of an unrefrigerated one, or chemicals are discovered on or near the site); (2) when the size, elevation, or configuration of the proposed project is altered; (3) when the location or orientation of the proposed project is modified; (4) when there is a change of ownership; or (5) for application to an adjacent site. Consultants cannot accept responsibility for problems that may occur if they are not consulted after factors which were considered in the development of the report have changed.

SUBSURFACE CONDITIONS CAN CHANGE.

Subsurface conditions may be affected as a result of natural processes or human activity. Because a geotechnical/environmental report is based on conditions that existed at the time of subsurface exploration, construction decisions should not be based on a report whose adequacy may have been affected by time. Ask the consultant to advise if additional tests are desirable before construction starts; for example, groundwater conditions commonly vary seasonally.

Construction operations at or adjacent to the site and natural events such as floods, earthquakes, or groundwater fluctuations may also affect subsurface conditions and, thus, the continuing adequacy of a geotechnical/environmental report. The consultant should be kept apprised of any such events, and should be consulted to determine if additional tests are necessary.

MOST RECOMMENDATIONS ARE PROFESSIONAL JUDGMENTS.

Site exploration and testing identifies actual surface and subsurface conditions only at those points where samples are taken. The data were extrapolated by your consultant, who then applied judgment to render an opinion about overall subsurface conditions. The actual interface between materials may be far more gradual or abrupt than your report indicates. Actual conditions in areas not sampled may differ from those predicted in your report. While nothing can be done to prevent such situations, you and your consultant can work together to help reduce their impacts. Retaining your consultant to observe subsurface construction operations can be particularly beneficial in this respect.

A REPORT'S CONCLUSIONS ARE PRELIMINARY.

The conclusions contained in your consultant's report are preliminary because they must be based on the assumption that conditions revealed through selective exploratory sampling are indicative of actual conditions throughout a site. Actual subsurface conditions can be discerned only during earthwork; therefore, you should retain your consultant to observe actual conditions and to provide conclusions. Only the consultant who prepared the report is fully familiar with the background information needed to determine whether or not the report's recommendations based on those conclusions are valid and whether or not the contractor is abiding by applicable recommendations. The consultant who developed your report cannot assume responsibility or liability for the adequacy of the report's recommendations if another party is retained to observe construction.

THE CONSULTANT'S REPORT IS SUBJECT TO MISINTERPRETATION.

Costly problems can occur when other design professionals develop their plans based on misinterpretation of a geotechnical/environmental report. To help avoid these problems, the consultant should be retained to work with other project design professionals to explain relevant geotechnical, geological, hydrogeological, and environmental findings, and to review the adequacy of their plans and specifications relative to these issues.

BORING LOGS AND/OR MONITORING WELL DATA SHOULD NOT BE SEPARATED FROM THE REPORT.

Final boring logs developed by the consultant are based upon interpretation of field logs (assembled by site personnel), field test results, and laboratory and/or office evaluation of field samples and data. Only final boring logs and data are customarily included in geotechnical/environmental reports. These final logs should not, under any circumstances, be redrawn for inclusion in architectural or other design drawings, because drafters may commit errors or omissions in the transfer process.

To reduce the likelihood of boring log or monitoring well misinterpretation, contractors should be given ready access to the complete geotechnical engineering/environmental report prepared or authorized for their use. If access is provided only to the report prepared for you, you should advise contractors of the report's limitations, assuming that a contractor was not one of the specific persons for whom the report was prepared, and that developing construction cost estimates was not one of the specific purposes for which it was prepared. While a contractor may gain important knowledge from a report prepared for another party, the contractor should discuss the report with your consultant and perform the additional or alternative work believed necessary to obtain the data specifically appropriate for construction cost estimating purposes. Some clients hold the mistaken impression that simply disclaiming responsibility for the accuracy of subsurface information always insulates them from attendant liability. Providing the best available information to contractors helps prevent costly construction problems and the adversarial attitudes that aggravate them to a disproportionate scale.

READ RESPONSIBILITY CLAUSES CLOSELY.

Because geotechnical/environmental engineering is based extensively on judgment and opinion, it is far less exact than other design disciplines. This situation has resulted in wholly unwarranted claims being lodged against consultants. To help prevent this problem, consultants have developed a number of clauses for use in their contracts, reports and other documents. These responsibility clauses are not exculpatory clauses designed to transfer the consultant's liabilities to other parties; rather, they are definitive clauses that identify where the consultant's responsibilities begin and end. Their use helps all parties involved recognize their individual responsibilities and take appropriate action. Some of these definitive clauses are likely to appear in your report, and you are encouraged to read them closely. Your consultant will be pleased to give full and frank answers to your questions.

PROJECT NAME: City of Bellevue
WO#1 - 130th Environmental Due Diligence

On behalf of the City of Bellevue, Parametrix conducted an environmental analysis related to several Sound Transit-owned properties (known as right-of-way [ROW] Properties #EL 296, EL 297, and EL 299) associated with the Sound Transit East Link Extension project (Figure 1). It is our understanding that the properties were acquired by Sound Transit as part of the lightrail project for construction of the 130th Station, as well as for use as construction staging. Potentially, the properties will be transferred to or otherwise acquired by the City of Bellevue once construction is complete. The City of Bellevue is exploring the potential for transit-oriented development (TOD) on the properties. As such, this environmental analysis was conducted as part of the City of Bellevue's due diligence and included review of previous environmental documents and other information.

As part of the environmental analysis, Parametrix reviewed the following available documents:

- *Phase I Environmental Site Assessment, ROW #EL 296, Elufa, 1606 130th Avenue NE, Bellevue, WA. Prepared by Shannon & Wilson. February 25, 2015.*
- *Phase II Environmental Site Assessment, ROW #EL 296, Elufa, 1606 130th Avenue NE, Bellevue, WA. Prepared by Shannon & Wilson. October 9, 2015.*
- *Limited Hazardous Materials Survey Report, ROW #EL 296, Elufa, 1606 130th Avenue NE, Bellevue, WA. Prepared by Shannon & Wilson. March 5, 2015.*
- *Phase I Environmental Site Assessment, ROW #EL 297, Aiphone Corporation, 1700 130th Avenue NE, Bellevue, WA. Prepared by Shannon & Wilson. June 30, 2015.*
- *Limited Hazardous Materials Survey Report, ROW #EL 297, Aiphone Corporation, 1700 130th Avenue NE, Bellevue, WA. Prepared by Shannon & Wilson. February 11, 2015*

- *Phase I Environmental Site Assessment, ROW #EL 299, Arnold's Appliances/Longview Publishing, 1625 132nd Avenue NE, Bellevue, WA. Prepared by Shannon & Wilson. April 27, 2015.*
- *Limited Hazardous Materials Survey Report, ROW #EL 299, Arnold's Appliances, 1625 132nd Avenue NE, Bellevue, WA. Prepared by Shannon & Wilson. February 12, 2015.*
- *Title Reports and other supporting documentation provided by Sound Transit for properties EL 296, EL 297, and EL 299.*
- *East Link Extension, Hazardous Materials Plan, Drawing No: L87-CXP031*

BACKGROUND

It is our understanding that Sound Transit has acquired the properties (EL 296, EL 297, and EL 299) as part of construction of the East Link Extension project, primarily to construct the 130th Station, as well as for use as construction staging. The location of the properties are included on Figure 1. Sound Transit is considering transfer of the properties to the City of Bellevue once the project is complete. The City of Bellevue is exploring the potential for transit-oriented development on the properties. Preliminary plans suggest mixed-use development including retail, apartments/condominiums, and parking facilities (with potential for underground parking). The City of Bellevue is conducting due diligence prior to negotiations for transferring the properties from Sound Transit and to assist with TOD alternatives. A review of the previous environmental documents was conducted and is summarized in the following section.

ENVIRONMENTAL ISSUE SUMMARY

Property #EL 296 – 1606 130th Avenue NE, Bellevue, WA

This property is approximately 1.18 acres in size and includes a 23,000 square foot building. At the time of the site walk (June 2017) the building was vacant, but appeared to be slated for demolition (estimated by July 2017). Based on historical information, the building was constructed in 1962 and has been primarily used for commercial businesses. A Phase I ESA, Phase II ESA, and Hazardous Materials Building Survey (HMBS) were conducted on the property in 2015, prior to Sound Transit acquisition, and revealed the following information:

Phase I ESA Conclusions

- During the Phase I ESA site walk, a tenant (Wall Doctor) had several waste drums stored on-site (primarily solvents such as toluene, acetone, and mineral spirits) and evidence of spills and floor staining were noted, suggesting potential improper handling and/or disposal of hazardous materials. This was identified as having potential to have impacted the property.
- Potential for impacts from the property to the northeast (Journal American/Longview Publishing; EL 297.1), was identified. This was related to two gasoline underground storage tanks (USTs) that were decommissioned at the site in 1995, along with excavation and off-site disposal of 75 tons of petroleum impacted soil. The subject property is directly downgradient from the Journal American site.
- The property to the west of the site, the Cadman Premix concrete batch plant, was identified as having several USTs with reported releases. Approximately 323 tons of contaminated soil was removed during decommissioning in 1998. The Phase I ESA indicated low potential for this site to impact the subject property.
- A site immediately to the south (Kelly's Autobody) includes USTs, but no reported releases.

Phase II ESA Conclusions

In 2015, a Phase II ESA was conducted on the subject property and included 4 borings for the collection of soil and groundwater samples, generally in all four corners around the building.

- Gasoline, lube oil, diesel, volatile organic compounds (VOCs) and metals were detected in soil at the site, but were below the Washington State Model Toxic Control Act (MTCA) cleanup levels.
- Petroleum hydrocarbons were not detected in any of the groundwater samples. Low levels of VOCs were detected, but appeared to be below the applicable MTCA cleanup levels. Low levels of metals were also detected, some slightly above MTCA cleanup levels. However, there is potential that these samples were elevated due to turbidity or naturally occurring conditions.

HMBS Conclusions

- The HMBS indicated that some hazardous materials were found in the building materials; these need to be properly abated and/or removed in accordance with local, State and Federal laws prior to or during demolition activities.

EL 296 Summary

Based on a review of the environmental documents, there appears to be some potential for on-site contamination associated with on-site or off-site facilities; however, the potential was thought to be generally low. Soil and/or groundwater samples collected on-site did identify low levels of contaminants; however, based on the results, were generally below regulatory cleanup levels and likely to be limited in extent and magnitude.

Property #EL 297 – 1700 130th Avenue NE, Bellevue, WA

This property is 1.23 acres in size and includes an approximately 18,000 square foot building. At the time of the site walk (June 2017) the building was primarily vacant, but appeared to be used for construction offices. The building was constructed in 1977 and generally used by Aiphone to develop and manufacture communication systems. A Phase I ESA and HMBS was conducted on the property in 2015 and revealed the following information:

Phase I ESA Conclusions

- The building has primarily been used by Aiphone to develop and manufacture communication systems. No significant use of hazardous materials were identified.
- Potential for impacts from the property to the east (Journal American/Longview Publishing; EL 297.1), was identified. This was related to two gasoline USTs that were decommissioned at the site in 1995, along with excavation and off-site disposal of 75 tons of petroleum impacted soil. A review of the site files suggest that no groundwater data could be located and may not have been conducted. Based on lack of groundwater samples and previous impacts to the property, this site was identified as having potential to impact the subject property.

HMBS Conclusions

- The HMBS indicated that some hazardous materials were found in the building materials; these need to be properly abated and/or removed in accordance with local, State and Federal laws.

EL 297 Summary

Based on a review of the environmental documents, there appears to be some potential for on-site contamination associated with on-site or off-site facilities; however, the potential was thought to be generally low. No on-site soil or groundwater data is available.

Property #EL 299 – 1625 132nd Avenue NE, Bellevue, WA

This property is 1.62 acres in size and includes a large building and surface parking. At the time of the site walk (June 2017) the building was undergoing demolition on the eastern portion. Reportedly, the building would be completely demolished by July 2017. The building had been used for various commercial businesses and appears to have one or more additions constructed. A Phase I ESA and HMBS was conducted on the property in 2015 and revealed the following information:

Phase I ESA Conclusions

- An oil storage room was identified in the original 4,850 square foot shop building in 1968 records.
- A larger building replaced the original shop in 1983, with a subsequent addition in 2005.
- Records indicated that the property included a former fuel dispenser and at least one UST; the exact date of UST decommissioning is unknown, but appears to have occurred during removal of the original shop building.
- Contaminated soil was identified in 1994 after the site had been redeveloped and a former press building constructed over part of the area of contamination. Remediation included the excavation and off-site disposal of approximately 40 tons of petroleum-impacted soil. It was estimated that approximately 430 cubic yards of contaminated soil was left in-place due to the proximity to the building foundation and underneath the building. The remaining contaminated soil was effectively capped by the existing building and placement of a new 4-inch asphalt parking lot.
- It appears that groundwater monitoring was conducted in 1994 through 1996. Petroleum hydrocarbons (diesel and gasoline) were detected below the MTCA cleanup levels at that time. Revisions of the MTCA cleanup levels in 2007 and 2013 suggest that earlier results would have slightly exceeded the revised cleanup level for diesel of 500 micrograms per liter.
- Ecology issued a conditional no further action (NFA) determination for the site, which included the acknowledgement of existing residual contamination being capped by hardscape to limit potential exposure. In 1996, a Restrictive Covenant (RC) was filed for the property associated with the residual contamination. Significant covenants in the RC include: 1) Ecology must be notified if any excavation is to be conducted and/or the existing hardscape (building, parking lot, etc.) is to be removed, 2) no water wells are allowed to be constructed on the property, and 3) residual contamination is capped by the asphalt parking lot and/or building and must be maintained to limit potential exposure. It is unknown if the conditions of the RC were followed during the current Sound Transit demolition project.
- Potential for impacts from the property to the north (Journal American/Longview Publishing; EL 297.1), was identified. This was related to two gasoline USTs that were decommissioned at the site in 1995, along with excavation and off-site disposal of 75 tons of petroleum impacted soil. A review of the site files suggest that no groundwater data could be located and may not have been conducted. Based on lack of groundwater samples and previous impacts to the property, this site was identified as having potential to impact the property.

HMBS Conclusions

- The HMBS indicated that some hazardous materials were found in the building materials; these need to be properly abated and/or removed in accordance with local, State and Federal laws.

EL 299 Summary

Documented contamination was identified on EL299, which includes approximately 430 cubic yard of petroleum-contaminated soil. Reportedly, an excavation is being conducted by Sound Transit, that allows up to 1,000 yards of soil for off-site disposal (based on East Link Extension drawing #: L87-CXP010). The schedule for this work is not known.

CONCLUSIONS/RECOMMENDATIONS

The following summarizes the results of the environmental analysis of the properties:

1. A review of the previous environmental documentation indicates that there is some potential for impacts to the three Sound Transit-owned properties. This is primarily based on past use of each of the properties and known impacts on adjacent sites. However, with the exception of Property EL 299, the potential for significant impacts appears to be relatively low. No soil or groundwater data exists for Property EL 297 to confirm current environmental conditions. Limited soil/groundwater data for Property EL 296 suggests low levels of contaminants may be present in the subsurface, but are primarily below current MTCA cleanup levels.
2. Existing contaminated soil was identified on Property EL 299, which includes an estimated 430 cubic yards of petroleum-impacted soil near the southern portion of the (former) building. Reportedly, an excavation is planned to be conducted by Sound Transit during the station development that allows up to 1,000 yards of contaminated soil for off-site disposal (based on East Link Extension Drawing No. L87-CXP031). The schedule for completion of the work is not known.
3. There is some evidence that groundwater has been or is currently impacted by on-site or off-site issues, specifically on Property EL 299 and to a lesser extent on Property EL 296. The potential for significant impacts and likelihood for cleanup activities to be required is low. However, given that groundwater is expected to be less than 10 feet below ground surface, potential construction activities such as dewatering or trenching should consider the potential for management and/or disposal requirements of excess water.
4. As noted above, the potential of significant adverse environmental conditions on or near the properties is relatively low (with the exception of EL 299). However, there is relatively little data to support that all impacts have been identified and/or sufficiently addressed (or planned to be addressed). In acceptance of the properties from Sound Transit, the City of Bellevue would likely accept some or all potential future environmental liability. As such, the City of Bellevue should consider establishing baseline environmental conditions prior to acquisition in the form of a limited Phase II ESA for all properties. This may also help with evaluation of TOD alternatives, and with establishing worker health & safety requirements, as well as potential management, handling and disposal of excavated material during future construction activities.

EXECUTIVE SUMMARY

On behalf of the City of Bellevue, Parametrix has prepared this Phase II Environmental Site Assessment (ESA) report for the related to three properties located at 130th Avenue NE in Bellevue, Washington (Figure 1). The properties are known as right-of-way (ROW) lots EL296, EL297, and EL299 (Figure 2). Based on the findings of this investigation, Parametrix reached the following conclusions:

1. A previous environmental review was conducted on the properties and identified several potential environmental issues, including: 1) the historical operation of commercial businesses on all three properties, 2) a known UST and associated soil contamination in the southern portion of property EL299, 3) a former UST on an adjacent property (EL 297.1), and 4) the potential to have been impacted by adjacent or nearby property releases.
2. A Phase II investigation was conducted at the site to evaluate subsurface conditions. In general, the 20 borings completed (labeled B-1 through B-20) were primarily utilized to investigate the general site conditions associated with historical use of the property and establish baseline environmental conditions. The work was completed as part of the City of Bellevue's due diligence in response to potentially acquiring the properties from Sound Transit. The City of Bellevue may potentially pursue transit-oriented development (TOD) on the properties.
3. Based on the sampling conducted on property EL297, it appears that limited soil and groundwater contamination exists on the property. Oil-range petroleum hydrocarbons were detected at a concentration of 50 mg/kg in boring B-1 at 11 feet bgs; however, it was significantly below the applicable MTCA cleanup level and does not constitute a concern. No other contaminants were detected in any of the soil samples on the property and no field evidence (visual, odor, or PID readings) of contamination were observed. Oil-range petroleum hydrocarbons (0.26 mg/L) were also detected in the groundwater sample collected from boring B-1, which is located in the northeast corner of the property. Constituent data suggests that the risk associated with groundwater contamination is low. No other groundwater contamination was detected on the property. Based on the presumed groundwater direction to the west-southwest, there is potential that the groundwater contamination may be from an off-site source. In any event, the contamination appears to be limited to petroleum hydrocarbons and is below Ecology's cleanup levels. Therefore, it is not expected that any cleanup actions would be required on the subject property. However, the low levels of groundwater contamination on the property does present some potential environmental liability and should be considered during acquisition and/or planning for future construction and/or excavation.
4. Based on the soil sampling conducted on property EL296, it appears that soil and groundwater contamination is limited. No field evidence (visual, odor, or PID readings) of contamination was observed in any of the borings and none of the soil samples analyzed showed any detections of contaminants at significant levels. As noted during the previous environmental review, there were some detections of several contaminants in soil samples from four borings completed in 2015, but were below MTCA cleanup levels. Diesel (0.51 mg/L) and oil (0.52) concentrations were detected in groundwater samples collected from boring B-11, which is located in the southwest corner of the property. The concentrations detected slightly exceed the Ecology cleanup levels of 0.5 mg/L. Based on the presumed groundwater direction to the west-southwest, there is potential that the

groundwater contamination may be from an on-site source or from the adjacent properties. As noted during the previous environmental review, petroleum hydrocarbons were not detected in groundwater at significant levels in four borings in 2015. Based on this information, it appears that contamination may be limited in extent and magnitude and significant remedial actions are not likely necessary. However, the low levels of groundwater contamination on the property does present some potential environmental liability and should be considered during acquisition and/or planning for future construction and/or excavation.

5. Based on the soil sampling conducted, it appears that soil contamination on property EL 299 is present, primarily in the area near boring B-15 in the northwest corner of the property. The elevated concentrations of diesel and oil-range petroleum hydrocarbons (maximum of 4,800 mg/kg) in samples collected from B-15 exceeds the MTCA Method A cleanup levels. Based on the lack of detections in surrounding borings (B-14, B-17, and B-20), it appears that contamination may be limited in both lateral and vertical extent. However, environmental liability from the existing contamination does exist and excavation and/or disturbance of any materials in that area will need to be properly handled, managed, and disposed. Based on the groundwater sampling, it appears that some contamination is associated with the area near boring B-15. Based on the presumed groundwater direction to the southwest, there is potential that the groundwater contamination may be from an off-site source; however, soil contamination detected in the boring suggests a local source. The concentrations of diesel-range petroleum hydrocarbons in groundwater significantly exceeds the MTCA Method A cleanup level; thus, the presence of groundwater contamination presents a moderate concern. The soil and groundwater contamination on the property presents an environmental liability and must be considered during acquisition and/or planning for future construction/excavation.
6. In relation to future TOD opportunities, the presence of soil and groundwater contamination on the properties does present some concern, but does not appear to be a significant barrier to development options and can be managed with appropriate measures. If significant excavation is required (i.e. subsurface parking structures or similar), it appears that the majority of soil at the site may potentially meet unrestricted use criteria; thus, significantly reducing potential costs. However, several areas of the site, particularly on property EL 299, appear to be impacted above MTCA cleanup levels and all soil in those areas will need to be managed appropriately to ensure health and safety of construction workers, as well as to ensure it is properly handled and disposed accordingly. Similarly, groundwater appears to be moderately impacted in several areas of the site and is known to be very shallow (<10 feet). If future construction involves subsurface structures, dewatering during excavation and trenching activities may potentially be required and proper handling, management, and disposal of groundwater will need to be conducted, potentially increasing construction costs significantly.

Based on the conclusions of this investigation, Parametrix offers the following recommendations:

1. The properties have been impacted by petroleum hydrocarbons and associated constituents in both soil and groundwater. Moderate soil impacts are primarily in the northeastern portion of property EL 299, with very low impacts in the remaining properties. Moderate groundwater impacts appear to coincide with soil impacts in the northeastern portion of property EL 299, with much less groundwater impacts in the northwestern portion of EL 297 and southwestern corner of EL 296. While soil and groundwater impacts do not appear to present a risk to current site use and occupants, it is recommended that potential cleanup alternatives and/or future liability costs be considered during any acquisition process and a change in site use, particularly for future workers or residents.
2. If the property is acquired and redeveloped, it is recommended that a contaminated media management plan (CMMP) be prepared for the site to guide excavation and construction activities, and describes potential contaminants, notification procedures, safety precautions, handling, storage and sampling of the contaminated materials. In addition, since the depth of groundwater is less than 10 feet bgs, there is potential that contaminated groundwater may be encountered during excavation or trenching activities for subsurface structures. Therefore, the CMMP should be prepared to include handling, management, and disposal of groundwater during construction activities.
3. Based on environmental review of past investigations and the results of the current investigation, it does not appear that the potential for TOD would be precluded by existing environmental conditions. Significant remedial actions may not be required, but existing contamination will need to be considered during any redevelopment and managed appropriately (per a CMMP). Reportedly, an excavation is planned to be conducted by Sound Transit during the station development that allows up to 1,000 yards of contaminated soil for off-site disposal (based on East Link Extension Drawing No. L87-CXP031). It is recommended that the City of Bellevue ensure that work is completed prior to any transfer of the property and appropriate documentation is provided. If feasible, it is recommended that contaminated soil in the northeast corner of EL 299 be removed prior to transfer of the property to minimize future environmental liability to the City. Additional investigation may be required to fully delineate the contamination; however, there is potential that the work could be completed as part of the construction activities and the planned contaminated soil excavation as noted above.
4. It is recommended that future environmental liability associated with the properties be considered by the City. It is recommended that any entity entering into an acquisition agreement with the site owner should consider legal protection against the discovery of previously unknown environmental conditions. This legal protection can be obtained in a number of alternatives, but is commonly completed through an Indemnification Clause in the Purchase and Sale Agreement or a Prospective Purchasers Agreement program.

1. INTRODUCTION

On behalf of the City of Bellevue, Parametrix has prepared this Phase II Environmental Site Assessment (ESA) report related to three properties located at 130th Avenue NE in Bellevue, Washington (Figure 1). The properties are known as right-of-way (ROW) lots EL296, EL297, and EL299 (Figure 2). The investigation activities were conducted to support the potential acquisition of the properties by the City of Bellevue from Sound Transit.

The properties were acquired by Sound Transit for the East Link Lightrail Extension project, primarily for construction of the 130th Station, as well as for use as construction staging. Sound Transit is considering transfer of the properties to the City of Bellevue once the project is complete. The City of Bellevue is exploring the potential for transit-oriented development (TOD) on the properties. Preliminary plans suggest mixed-use development including retail, apartments/condominiums, and parking facilities (with potential for underground parking).

The City of Bellevue is conducting due diligence prior to negotiations for transferring the properties from Sound Transit and to assist with TOD alternatives. In July 2017, Parametrix completed an environmental analysis of the properties, which primarily included review and evaluation of previous environmental documents and supporting information (Parametrix 2017a).

This Phase II ESA was conducted in accordance with the scope of work provided to the City. All field activities were performed in accordance with the site Health and Safety Plan (HASP) dated August 2017 (Parametrix 2017b). The purpose of the Phase II ESA was to evaluate current environmental conditions at the subject properties and determine if the past use of the properties had impacted subsurface conditions. Specific tasks included the collection of soil and groundwater samples from 20 investigative borings on the three properties. Conclusions and recommendations within this report are based on observed evidence and data collected during the performance of this assessment, as well as information obtained through previous investigations or documentation, where available.

1.1 Site Location

The subject properties are located between 130th Avenue NE and 132nd Avenue NE in Bellevue, Washington (Figure 1). The subject property includes ROW lots EL296 (1606 130th Avenue NE), EL297 (1700 130th Avenue NE), and EL299 (1625 132nd Avenue NE). The boundaries of the parcels are shown on Figure 2.

1.2 Site and Vicinity Characteristics

The following includes site characteristics for each of the three subject properties.

1.2.1 Property EL296

This property is approximately 1.18 acres in size and previously included a 23,000 square foot building. The building was demolished in July 2017; currently the property is vacant and consists of bare ground that has been graded. Based on historical information, the building was constructed in 1962 and was primarily used for commercial businesses.

1.2.2 Property EL297

This property is 1.23 acres in size and includes an approximately 18,000 square foot building. The building was constructed in 1977 and generally used by Aiphone to develop and manufacture communication systems. Currently, the building is mostly vacant, but appears to be used for construction offices by Sound Transit and/or its contractors.

1.2.3 Property EL299

This property is 1.62 acres in size and previously included a large building and surface parking. The building was demolished in July 2017; currently the property is vacant and consists of bare ground that has been graded. The building had been used for various commercial businesses and appeared to have one or more additions constructed.

1.3 Physical Setting

The subject properties are located within the Puget Sound Basin, a broad, low-lying region between the Cascade Range to the east and the Olympic Mountains to the west. The existing topography and regional geology have been largely shaped by glacial activity. The region is mostly underlain by Vashon till, a light-gray virtually unsorted, unstratified compact mixture of boulders, cobbles, sand, silt, and clay that can be up to 150 feet thick.

The regional geology consists of a sequence of glacially consolidated soils overlying bedrock. The underlying soils were consolidated under the weight of glaciers and became generally very hard and/or compact. Surface soils in the subject property area generally consist of a mixture of sands, silts, and gravels of varying thicknesses and occurrences.

Topography at the site slopes to the southwest. Based on soil boring and well logs reviewed for the subject property area, as well as those completed for the current investigation, shallow soil consists mostly of sand, intermixed with gravels and silts.

Groundwater levels in this area range from about 5 to 15 feet bgs. Groundwater flow in this portion of the Puget Lowland has been characterized by a gradient to the west. During the current investigation, groundwater was encountered between approximately 8 and 10 feet bgs.

2. PREVIOUS INVESTIGATIONS

An environmental evaluation (document review) was conducted on the subject properties by Parametrix in July 2017 (Parametrix 2017a). Relevant conclusions of the evaluation are included below:

1. A review of the previous environmental documentation indicates that there is some potential for impacts to the three Sound Transit-owned properties. This is primarily based on past use of each of the properties and known impacts on adjacent sites. However, with the exception of property EL 299, the potential for significant impacts appears to be relatively low. No soil or groundwater data exists for property EL 297 to confirm current environmental conditions. Limited soil/groundwater data for property EL 296 suggests low levels of contaminants may be present in the subsurface, but are primarily below current MTCA cleanup levels.
2. Existing contaminated soil was identified on property EL 299, which includes an estimated 430 cubic yards of petroleum-impacted soil near the southern portion of the (former) building. Reportedly, an excavation is planned to be conducted by Sound Transit during the station development that allows up to 1,000 yards of contaminated soil for off-site disposal (based on East Link Extension Drawing No. L87-CXP031). The schedule for completion of the work is not known.
3. There is some evidence that groundwater has been or is currently impacted by on-site or off-site issues, specifically on property EL 299 and to a lesser extent on property EL 296. The potential for significant impacts and likelihood for cleanup activities to be required is low. However, given that groundwater is expected to be less than 10 feet below ground surface, potential construction activities such as dewatering or trenching should consider the potential for management and/or disposal requirements of excess water.
4. As noted above, the potential of significant adverse environmental conditions on or near the properties is relatively low (with the exception of EL 299). However, there is relatively little data to support that all impacts have been identified and/or sufficiently addressed (or planned to be addressed). In acceptance of the properties from Sound Transit, the City of Bellevue would likely accept some or all potential future environmental liability. As such, the City of Bellevue should consider establishing baseline environmental conditions prior to acquisition in the form of a limited Phase II ESA for all properties. This may also help with evaluation of TOD alternatives, and with establishing worker health & safety requirements, as well as potential management, handling and disposal of excavated material during future construction activities.

The Phase II ESA was conducted based on issues identified during the environmental analysis and to evaluate the subject properties for possible subsurface contamination. The focus of the Phase II ESA was on establishing baseline environmental conditions.

3. SUBSURFACE INVESTIGATION

On August 14, 15, and 16, 2017, Parametrix supervised the drilling of investigative borings on the subject properties. The borings (labeled B-1 through B-20) were primarily utilized to establish baseline environmental conditions. However, specific areas of investigation included a former UST and known contamination on the south-central portion of property EL299, as well as borings placed on the north side of property EL299 where a former UST had been identified on the adjacent property to the north (EL297.1). The location of the borings are shown on Figure 2. The following sections describe the soil and groundwater sampling methods and analytical results.

3.1 Investigative Methods

The following sections describe the sampling methods utilized at the site.

3.1.1 Soil Borings

Using a powered direct-push drill rig, Cascade Drilling, Inc. (Cascade Drilling) of Woodinville, Washington, provided the drilling services and obtained all required permits from the Washington Department of Ecology (Ecology). A private utility locate was conducted by APS Locates prior to drilling at the site and the Washington One-Call notification was also completed. A total of 20 borings were completed on the subject properties and are shown on Figure 2.

The direct-push probe consists of a section of hollow steel rod attached to a 5-foot long macro core sample barrel. After a section of the steel rod was advanced in each boring to specific sampling depths, the sampler, lined with a clear acetate liner, was attached to the rod and advanced 5 feet. The acetate liner containing the soil sample was then removed from the sample barrel, a clean liner inserted into the sample barrel, and the steel rod replaced into the boring. Borings were advanced to approximately 15 to 20 feet bgs on the subject property. Field boring logs are included in Appendix A.

The collection of soil samples from each boring was based on field observations and the goals of this assessment. In general, if there were no olfactory, visual, or PID indications of contamination, samples were collected from approximately the top five feet of soil, and between approximately 5 and 10 feet bgs. In most cases, deeper samples were collected at approximately 10 to 15 feet bgs. Sample nomenclature includes the boring identification and the depth from which the sample was collected. For example, the sample collected from boring B-1 at a depth of 1.5 feet bgs is labeled B-1-1.5.

Soil samples were transferred from the clear PVC liners into appropriately labeled, laboratory-supplied 4- and 8-ounce glass jars with Teflon[®]-lined lids and placed into a cooler with ice. Samples intended for volatile analysis (gasoline or benzene, ethylbenzene, toluene, and xylenes [BTEX]) were collected by EPA Method 5035 using a T-core sampler/syringe and transferred into laboratory-supplied and preserved VOA vials. The samples were transported under chain-of-custody procedures to ALS Environmental in Everett, Washington. Only select samples were analyzed by the laboratory. Laboratory analysis generally focused on petroleum hydrocarbons using the Northwest Methods for gasoline-range petroleum hydrocarbons (NWTPH-Gx) and diesel-range petroleum hydrocarbons (NWTPH-Dx). Based on petroleum results or other indications, a subset of the samples were analyzed for BTEX using EPA Method 8021, volatile organic compounds (VOCs) using EPA Method 8260B, polycyclic aromatic hydrocarbons (PAHs) using EPA Method 8270-SIM, and/or MTCA (5) metals using the EPA Method 6000/7000 series.

3.1.2 Groundwater

Groundwater samples for laboratory analysis were collected from eight locations (borings B-1, B-5, B-10, B-11, B-13, B-15, B-17 and B-18) using the probe system four-foot long by ¾-inch diameter sealed screen sampler. The groundwater sample locations are included on Figure 2.

The groundwater sample probe was advanced to the desired sampling depth and the screen exposed by retracting the probe rods. Clean polyethylene tubing was then inserted through the steel rod to the bottom of the screen and attached at the surface to a peristaltic pump. Prior to collecting groundwater samples, the borings were purged until they were emptied and allowed to recharge or until approximately three bore volumes of groundwater were removed and the groundwater cleared. After purging activities were complete, groundwater samples were collected using the peristaltic pump. The samples were transferred into appropriately labeled 40-milliliter glass vials with Teflon® septum lids and preserved with dilute hydrochloric acid. Additional samples were collected using the surface pump and transferred into appropriately labeled 32-ounce glass amber bottles and 500-milliliter plastic bottles with Teflon®-lined lids.

The groundwater samples were placed into a cooler with ice and transported under chain-of-custody procedures to ALS Environmental for analysis. The samples were analyzed for gasoline and diesel-range petroleum hydrocarbons by Northwest Methods NWTPH-Gx and NWTPH-Dx. In addition, select samples (up to 5) were additionally analyzed for VOCs, PAHs and/or MTCA (5) metals using EPA Methods 8260B, 8270-SIM, and 6010/7471 series, respectively.

3.2 Laboratory Analytical Results

The following sections summarize the soil and groundwater analytical results for each of the three properties investigated.

3.2.1 Property EL297

A total of five borings (B-1 through B-5) were completed on property EL297. The location of the borings are shown on Figure 2. Soil analytical results are summarized in Tables 1 and 2 and groundwater analytical results are summarized in Tables 3 and 4. Selected soil and groundwater analytical data is included on Figures 3 and 4, respectively. Copies of the laboratory reports and chain-of-custody documentation are included in Appendix B. Analytical results were primarily compared to the Washington State Model Toxic Control Act (MTCA) Method A and B cleanup levels.

3.2.1.1 Soil

Gasoline and diesel-range petroleum hydrocarbons were not detected in any of the soil samples analyzed (Table 1). Oil-range petroleum hydrocarbons were detected at a concentration of 50 milligrams per kilogram (mg/kg) in boring B-1 at 11 feet bgs, significantly below the MTCA Method A cleanup level of 2,000 mg/kg. No other oil was detected in any of the soil samples, including in the sample collected from boring B-1 at 5.5 feet bgs (Table 1).

Based on the lack of significant gasoline or diesel-range petroleum hydrocarbons detected, additional analysis for VOCs and/or PAHs were not conducted (Tables 1 and 2).

MTCA 5 metals (mercury, arsenic, cadmium, chromium, and lead) were analyzed in three of the soil samples collected on property EL 297. As shown on Table 2, none of the concentrations of metals detected were significant and all were below MTCA Method A cleanup levels.

Based on the soil sampling conducted, it appears that soil contamination on property EL 297 is limited. No field evidence (visual, odor, or photoionization detector [PID] readings) of contamination was observed in any of the borings. The single detection of oil in boring B-1 does not constitute a significant concern and is well below Ecology cleanup levels. Based on the depth of the boring (near the water zone), it appears that the detection of oil could be associated with groundwater contamination (see Section 3.2.1.2 below).

3.2.1.2 Groundwater

Gasoline and diesel-range petroleum hydrocarbons were not detected in groundwater samples collected from borings B-1 and B-5. Oil-range petroleum hydrocarbons were detected in boring B-1 at a concentration of 0.26 milligrams per liter (mg/L). The oil concentration is below the MTCA Method A cleanup level of 0.5 mg/L. Oil-range petroleum hydrocarbons were not detected in boring B-5.

Low levels of PAHs were detected in the groundwater sample collected from boring B-1. However, the concentrations detected were significantly below the MTCA Method A or B cleanup levels (Table 3). Low concentrations of metals (arsenic and chromium) were detected in the sample, but were significantly below MTCA cleanup levels (Table 4).

PAHs and VOCs were not detected in the groundwater sample collected from boring B-5.

Based on the groundwater sampling, it appears that some contamination is associated with the area near boring B-1, which is located in the far northwest corner of the property. No other contamination (soil or groundwater) was detected on the property. Based on the presumed groundwater direction to the southwest, there is potential that the groundwater contamination may be from an off-site source. In any event, the contamination appears to be limited to heavy-end (oil) petroleum hydrocarbons and is below Ecology's cleanup levels. Therefore, the likelihood of cleanup actions on the subject property is low.

3.2.2 Property EL296

A total of seven borings (B-6 through B-12) were completed on property EL296. The location of the borings are shown on Figure 2. Soil analytical results are summarized in Tables 1 and 2 and groundwater analytical results are summarized in Tables 3 and 4. Selected soil and groundwater analytical data is included on Figures 3 and 4, respectively. Copies of the laboratory reports and chain-of-custody documentation are included in Appendix B. Analytical results were primarily compared to the MTCA Method A and B cleanup levels.

3.2.2.1 Soil

Gasoline-range petroleum hydrocarbons were not detected in any of the samples analyzed. In addition, diesel and oil-range petroleum hydrocarbons were not detected in any of the samples analyzed (Table 1).

Based on the lack of gasoline or diesel-range petroleum hydrocarbons, VOCs and/or PAHs were not analyzed (Tables 1 and 2).

MTCA 5 metals (mercury, arsenic, cadmium, chromium, and lead) were analyzed in three soil samples. None of the concentrations of metals detected were significant and all were below MTCA Method A cleanup levels (Table 2).

Based on the soil sampling conducted, it appears that soil contamination on property EL 296 is limited. No field evidence (visual, odor, or PID readings) of contamination was observed in any of the borings and none of the soil samples analyzed showed any detections of contaminants at significant levels. As noted during the previous environmental review, there were some detections of gasoline, lube oil, diesel, VOCs and metals in four borings completed in 2015, but were below MTCA cleanup levels (Parametrix 2017a).

3.2.2.2 Groundwater

Gasoline and diesel-range petroleum hydrocarbons were not detected in groundwater samples collected from boring B-10. In addition, gasoline-range petroleum hydrocarbons were not detected in boring B-11. Diesel and oil-range petroleum hydrocarbons were detected in boring B-11 at concentrations of 0.51 mg/L and 0.52 mg/L, respectively. The diesel and oil concentrations are slightly above the MTCA Method A cleanup level of 0.5 mg/L.

PAHs were not detected in the groundwater sample from boring B-10.

VOCs were not detected in the groundwater sample from boring B-11. Low concentrations of metals (arsenic, chromium, and lead) were detected in the sample, but were significantly below MTCA cleanup levels.

Based on the groundwater sampling, it appears that some contamination is associated with the area near boring B-11, which is located in the far southwest corner of the property. Based on the presumed groundwater direction to the southwest, there is potential that the groundwater contamination may be from an on-site source or from the adjacent properties. As noted during the previous environmental review, petroleum hydrocarbons and VOCs were not detected at significant levels in four borings in 2015 (Parametrix 2017a). The current concentrations of diesel-range petroleum hydrocarbons is slightly above the MTCA cleanup level; thus, the presence of groundwater contamination does present some concern and potential future liability. However, it is not expected that significant remedial actions would be necessary.

3.2.3 Property EL299

A total of eight borings (B-13 through B-20) were completed on property EL299. The location of the borings are shown on Figure 2. Soil analytical results are summarized in Tables 1 and 2 and groundwater analytical results are summarized in Tables 3 and 4. Selected soil and groundwater analytical data is included on Figures 3 and 4, respectively. Copies of the laboratory reports and chain-of-custody documentation are included in Appendix B. Analytical results were primarily compared to the MTCA Method A and B cleanup levels.

3.2.3.1 Soil

As shown in Table 1, 15 soil samples were analyzed for petroleum hydrocarbons; 10 of which had no detections of gasoline, diesel, and/or oil.

Petroleum hydrocarbons were detected in all three soil samples collected from boring B-15 from 1 to 6 feet bgs in the northeast corner of the property. The maximum concentration detected was oil-range petroleum hydrocarbons at 4,800 mg/kg from 6 feet bgs, which exceeds the MTCA Method A cleanup levels. Due to shallow groundwater present, deeper soil samples could not be collected from the boring. However, no diesel and oil-range petroleum hydrocarbons were detected in borings B-14, B-17, and B-20 to the west, southwest, and south, respectively, suggesting that the lateral and vertical extent of contamination is limited (see Figure 3).

The sample from boring B-15 at 6 feet bgs was further analyzed for PAHs and VOCs. Several PAH compounds were detected, but at concentrations significantly lower than the MTCA Method A cleanup levels. In addition, several VOC compounds were also detected, but at concentrations lower than the MTCA Method A cleanup levels. Low concentrations of metals were detected in samples collected from 3.5 feet bgs, but at concentrations below the MTCA Method A cleanup levels. Based on the sample results, the area near boring B-15 appears to have been impacted by petroleum hydrocarbons. Associated constituents, PAHs and VOCs, appear to be limited and do not present a significant risk.

Gasoline-range petroleum hydrocarbons were detected in the sample collected from boring B-17 at 1.5 feet bgs at a concentration of 100 mg/kg. Based on the gasoline detection, BTEX was analyzed for the sample; all BTEX compounds were non-detect. Based on the lack of benzene, the established MTCA cleanup level for gasoline is 100 mg/kg. Gasoline was not detected in the sample collected from 6 feet bgs. Therefore, based on the sample results, the gasoline contamination appears to be limited in extent, both vertically and laterally, and the concentration is not significant.

Based on the soil sampling conducted, it appears that significant soil contamination on property EL 299 is generally limited to the area near boring B-15 in the northwest corner of the property. No field evidence (visual, odor, or PID readings) of contamination was observed in any of the other borings. The elevated concentrations of diesel and oil-range petroleum hydrocarbons in samples collected from B-15 is of some concern. Based on the lack of detections in surrounding borings (B-14, B-17, and B-20), it appears that contamination may be limited in extent. It is not expected that significant remedial efforts will be required. However, liability from the existing contamination does exist and excavation and/or disturbance of any materials in that area will need to be properly handled, managed, and disposed.

3.2.3.2 Groundwater

Gasoline and diesel-range petroleum hydrocarbons were not detected in groundwater samples collected from borings B-13, B-17, and B-18. Oil was detected at a concentration of 0.27 mg/L in boring B-18, but is below the MTCA Method A cleanup level of 0.5 mg/L.

Gasoline, diesel and oil-range petroleum hydrocarbons were detected in boring B-15 at concentrations of 0.076 mg/L, 2.6 mg/L and 4.5 mg/L, respectively. The diesel and oil concentrations are above the MTCA Method A cleanup level of 0.5 mg/L. As discussed above, significant soil contamination was observed in the upper 10 feet of boring B-15.

Low concentrations of PAHs were detected in the groundwater sample collected from boring B-15. With the exception of 1-methylnaphthalene, the concentrations were significantly below MTCA cleanup levels. Very low levels of PAHs were also detected in boring B-18. No PAHs were detected in the groundwater sample collected from boring B-13.

VOCs were not detected in the groundwater samples from borings B-13, B-15, and B-18. Low concentrations of metals (arsenic, cadmium, chromium, and lead) were detected in the samples, but were significantly below MTCA cleanup levels.

Based on the groundwater sampling, it appears that some contamination is associated with the area near boring B-15, which is located in the northeast corner of the property. Based on the presumed groundwater direction to the southwest, there is potential that the groundwater contamination may be from an off-site source; however, soil contamination detected in boring B-15 at elevated concentrations does suggest a local source. The concentrations of diesel-range petroleum hydrocarbons are above the MTCA cleanup level; thus, the presence of groundwater contamination in the northeast corner of the EL299 does present some concern and potential future liability.

4. CONCLUSIONS

Parametrix conducted a Phase II ESA at three properties (EL296, EL297, and EL299) in the 130th Avenue NE area of Bellevue, Washington. Based on the findings of this investigation, Parametrix reached the following conclusions:

1. A previous environmental review was conducted on the properties and identified several potential environmental issues, including: 1) the historical operation of commercial businesses on all three properties, 2) a known UST and associated soil contamination in the southern portion of property EL299, 3) a former UST on an adjacent property (EL 297.1), and 4) the potential to have been impacted by adjacent or nearby property releases.
2. A Phase II investigation was conducted at the site to evaluate subsurface conditions. In general, the 20 borings completed (labeled B-1 through B-20) were primarily utilized to investigate the general site conditions associated with historical use of the property and establish baseline environmental conditions. The work was completed as part of the City of Bellevue's due diligence in response to potentially acquiring the properties from Sound Transit. The City of Bellevue may potentially pursue transit-oriented development (TOD) on the properties.
3. Based on the sampling conducted on property EL297, it appears that limited soil and groundwater contamination exists on the property. Oil-range petroleum hydrocarbons were detected at a concentration of 50 mg/kg in boring B-1 at 11 feet bgs; however, it was significantly below the applicable MTCA cleanup level and does not constitute a concern. No other contaminants were detected in any of the soil samples on the property and no field evidence (visual, odor, or PID readings) of contamination were observed. Oil-range petroleum hydrocarbons (0.26 mg/L) were also detected in the groundwater sample collected from boring B-1, which is located in the northeast corner of the property. Constituent data suggests that the risk associated with groundwater contamination is low. No other groundwater contamination was detected on the property. Based on the presumed groundwater direction to the west-southwest, there is potential that the groundwater contamination may be from an off-site source. In any event, the contamination appears to be limited to petroleum hydrocarbons and is below Ecology's cleanup levels. Therefore, it is not expected that any cleanup actions would be required on the subject property. However, the low levels of groundwater contamination on the property does present some potential environmental liability and should be considered during acquisition and/or planning for future construction and/or excavation.
4. Based on the soil sampling conducted on property EL296, it appears that soil and groundwater contamination is limited. No field evidence (visual, odor, or PID readings) of contamination was observed in any of the borings and none of the soil samples analyzed showed any detections of contaminants at significant levels. As noted during the previous environmental review, there were some detections of several contaminants in soil samples from four borings completed in 2015, but were below MTCA cleanup levels. Diesel (0.51 mg/L) and oil (0.52) concentrations were detected in groundwater samples collected from boring B-11, which is located in the southwest corner of the property. The concentrations detected slightly exceed the Ecology cleanup levels of 0.5 mg/L. Based on the presumed groundwater direction to the west-southwest, there is potential that the groundwater contamination may be from an on-site source or from the adjacent properties. As

noted during the previous environmental review, petroleum hydrocarbons were not detected in groundwater at significant levels in four borings in 2015. Based on this information, it appears that contamination may be limited in extent and magnitude and significant remedial actions are not likely necessary. However, the low levels of groundwater contamination on the property does present some potential environmental liability and should be considered during acquisition and/or planning for future construction and/or excavation.

5. Based on the soil sampling conducted, it appears that soil contamination on property EL 299 is present, primarily in the area near boring B-15 in the northwest corner of the property. The elevated concentrations of diesel and oil-range petroleum hydrocarbons (maximum of 4,800 mg/kg) in samples collected from B-15 exceeds the MTCA Method A cleanup levels. Based on the lack of detections in surrounding borings (B-14, B-17, and B-20), it appears that contamination may be limited in both lateral and vertical extent. However, environmental liability from the existing contamination does exist and excavation and/or disturbance of any materials in that area will need to be properly handled, managed, and disposed. Based on the groundwater sampling, it appears that some contamination is associated with the area near boring B-15. Based on the presumed groundwater direction to the southwest, there is potential that the groundwater contamination may be from an off-site source; however, soil contamination detected in the boring suggests a local source. The concentrations of diesel-range petroleum hydrocarbons in groundwater significantly exceeds the MTCA Method A cleanup level; thus, the presence of groundwater contamination presents a moderate concern. The soil and groundwater contamination on the property presents an environmental liability and must be considered during acquisition and/or planning for future construction/excavation.
6. In relation to future TOD opportunities, the presence of soil and groundwater contamination on the properties does present some concern, but does not appear to be a significant barrier to development options and can be managed with appropriate measures. If significant excavation is required (i.e. subsurface parking structures or similar), it appears that the majority of soil at the site may potentially meet unrestricted use criteria; thus, significantly reducing potential costs. However, several areas of the site, particularly on property EL 299, appear to be impacted above MTCA cleanup levels and all soil in those areas will need to be managed appropriately to ensure health and safety of construction workers, as well as to ensure it is properly handled and disposed accordingly. Similarly, groundwater appears to be moderately impacted in several areas of the site and is known to be very shallow (<10 feet). If future construction involves subsurface structures, dewatering during excavation and trenching activities may potentially be required and proper handling, management, and disposal of groundwater will need to be conducted, potentially increasing construction costs significantly.

5. RECOMMENDATIONS

Based on the conclusions of this investigation, Parametrix offers the following recommendations:

1. The properties have been impacted by petroleum hydrocarbons and associated constituents in both soil and groundwater. Moderate soil impacts are primarily in the northeastern portion of property EL 299, with very low impacts in the remaining properties. Moderate groundwater impacts appear to coincide with soil impacts in the northeastern portion of property EL 299, with much less groundwater impacts in the northwestern portion of EL 297 and southwestern corner of EL 296. While soil and groundwater impacts do not appear to present a risk to current site use and occupants, it is recommended that potential cleanup alternatives and/or future liability costs be considered during any acquisition process and a change in site use, particularly for future workers or residents.
2. If the property is acquired and redeveloped, it is recommended that a contaminated media management plan (CMMP) be prepared for the site to guide excavation and construction activities, and describes potential contaminants, notification procedures, safety precautions, handling, storage and sampling of the contaminated materials. In addition, since the depth of groundwater is less than 10 feet bgs, there is potential that contaminated groundwater may be encountered during excavation or trenching activities for subsurface structures. Therefore, the CMMP should be prepared to include handling, management, and disposal of groundwater during construction activities.
3. Based on environmental review of past investigations and the results of the current investigation, it does not appear that the potential for TOD would be precluded by existing environmental conditions. Significant remedial actions may not be required, but existing contamination will need to be considered during any redevelopment and managed appropriately (per a CMMP). Reportedly, an excavation is planned to be conducted by Sound Transit during the station development that allows up to 1,000 yards of contaminated soil for off-site disposal (based on East Link Extension Drawing No. L87-CXP031). It is recommended that the City of Bellevue ensure that work is completed prior to any transfer of the property and appropriate documentation is provided. If feasible, it is recommended that contaminated soil in the northeast corner of EL 299 be removed prior to transfer of the property to minimize future environmental liability to the City. Additional investigation may be required to fully delineate the contamination; however, there is potential that the work could be completed as part of the construction activities and the planned contaminated soil excavation as noted above.
4. It is recommended that future environmental liability associated with the properties be considered by the City. It is recommended that any entity entering into an acquisition agreement with the site owner should consider legal protection against the discovery of previously unknown environmental conditions. This legal protection can be obtained in a number of alternatives, but is commonly completed through an Indemnification Clause in the Purchase and Sale Agreement or a Prospective Purchasers Agreement program.

Laboratory Analytical Reports

September 6, 2017

Mr. Rick Wadsworth
Parametrix, Inc.
700 NE Multnomah, Suite 1000
Portland, OR 97332

Dear Mr. Wadsworth,

On August 15th, 48 samples were received by our laboratory and assigned our laboratory project number EV17080081. The project was identified as your City of Bellevue - 130th Ave NE Properties. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Rick Bagan
Laboratory Director

U - Analyte analyzed for but not detected at level above reporting limit.
 Chromatogram indicates that it is likely that sample contains highly weathered gasoline, weathered diesel and light oil.
 Diesel range product results biased high due to oil range product overlap.
 Gasoline range product results biased high due to semivolatile range product overlap.

CERTIFICATE OF ANALYSIS

CLIENT: Parametrix, Inc. DATE: 9/6/2017
700 NE Multnomah, Suite 1000 ALS JOB#: EV17080081
Portland, OR 97332 ALS SAMPLE#: EV17080081-42
CLIENT CONTACT: Rick Wadsworth DATE RECEIVED: 08/15/2017
CLIENT PROJECT: City of Bellevue - 130th Ave NE Properties COLLECTION DATE: 8/14/2017 9:45:00 AM
CLIENT SAMPLE ID B-11-W WDOE ACCREDITATION: C601

SAMPLE DATA RESULTS

Table with 5 columns: SURROGATE, METHOD, %REC, ANALYSIS DATE, ANALYSIS BY. Rows include TFT, C25, 1,2-Dichloroethane-d4, Toluene-d8, and 4-Bromofluorobenzene.

U - Analyte analyzed for but not detected at level above reporting limit.
Chromatogram indicates that it is likely that sample contains an unidentified diesel range product and light oil/lube oil.
Diesel range product results biased high due to oil range product overlap.

U - Analyte analyzed for but not detected at level above reporting limit.
 Chromatogram indicates that it is likely that sample contains highly weathered gasoline, weathered diesel and light oil.
 Diesel range product results biased high due to oil range product overlap.

LABORATORY BLANK RESULTS

MBLK-300523 - Batch R300523 - Soil by EPA-7471

U - Analyte analyzed for but not detected at level above reporting limit.

MBLK-300509 - Batch R300509 - Water by EPA-245.1

ANALYTE	METHOD	RESULTS	UNITS	REPORTING LIMITS	ANALYSIS DATE	ANALYSIS BY
Mercury	EPA-245.1	U	UG/L	0.20	08/21/2017	RAL

U - Analyte analyzed for but not detected at level above reporting limit.

MB-081717S - Batch 119389 - Soil by EPA-6020

ANALYTE	METHOD	RESULTS	UNITS	REPORTING LIMITS	ANALYSIS DATE	ANALYSIS BY
Arsenic	EPA-6020	U	MG/KG	0.20	08/17/2017	RAL
Cadmium	EPA-6020	U	MG/KG	0.10	08/17/2017	RAL
Chromium	EPA-6020	U	MG/KG	0.10	08/17/2017	RAL
Lead	EPA-6020	U	MG/KG	0.10	08/17/2017	RAL

U - Analyte analyzed for but not detected at level above reporting limit.

MB-081817W - Batch 119401 - Water by EPA-200.8

ANALYTE	METHOD	RESULTS	UNITS	REPORTING LIMITS	ANALYSIS DATE	ANALYSIS BY
Arsenic	EPA-200.8	U	UG/L	1.0	08/21/2017	RAL
Cadmium	EPA-200.8	U	UG/L	1.0	08/21/2017	RAL
Chromium	EPA-200.8	U	UG/L	2.0	08/21/2017	RAL
Lead	EPA-200.8	U	UG/L	1.0	08/21/2017	RAL

U - Analyte analyzed for but not detected at level above reporting limit.

August 25, 2017

Mr. Rick Wadsworth
Parametrix, Inc.
700 NE Multnomah, Suite 1000
Portland, OR 97332

Dear Mr. Wadsworth,

On August 16th, 3 samples were received by our laboratory and assigned our laboratory project number EV17080088. The project was identified as your City of Bellevue 130th Ave NE Properties. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Rick Bagan
Laboratory Director

APPROVED BY

Laboratory Director

September 1, 2017

Mr. Rick Wadsworth
Parametrix, Inc.
700 NE Multnomah, Suite 1000
Portland, OR 97332

Dear Mr. Wadsworth,

On August 18th, 18 samples were received by our laboratory and assigned our laboratory project number EV17080107. The project was identified as your City of Bellevue - 130th Ave NE Properties. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Glen Perry
Technical Manager

Subject: **Restrictive Covenant; Former Journal American Facility,
1705 132nd Avenue NE, Bellevue, WA; Facility ID # 2558
Ecology Cleanup Site ID 5149**

Dear Ms. Welty,

As you were informed previously, Sound Transit purchased the above referenced site in September of 2015 from Mr. Richard Moline of 22424 NE 200th St., Woodinville, WA (dba Enilom Properties, LLC). In the process of redeveloping the property as part of our East Link Extension Light Rail Project, Sound Transit has recently demolished the former Journal American building and removed the residual contaminated soil as defined in cleanup documents and in the Restrictive Covenant associated with the property.

This letter is intended to provide written notification to Ecology, as required under paragraph (d) of the covenant, that Sound Transit has removed the former Journal American building and loading dock referenced in the covenant and has completed the removal and disposal of the residual contaminated soil which remained following the 1996 Independent Remedial Action and which was the subject of the Restrictive Covenant.

Attached please find paper and electronic copies of a report which documents the removal of the contaminated soil and demonstrates that it was successfully remediated to current unrestricted land use levels as set forth in WAC 173-340-700 through 760.

Furthermore, Sound Transit is entering into an agreement with the City of Bellevue to transfer ownership of the subject parcel to the City. Please consider this letter to fulfill the notification required under paragraph "F" of the Restrictive Covenant. The City is aware of the existence of this Covenant.

Should you have any questions or wish to discuss our planned activities, please contact me at 206-398-5227 or at Mark.Menard@soundtransit.org.

1.0 INTRODUCTION

Sound Transit, officially the Central Puget Sound Regional Transit Authority, is a public transit agency serving the Seattle metropolitan area in Washington State. Beginning in 2015, Sound Transit commenced construction on the East Link light rail corridor through Bellevue, Washington. This project is divided into four segments referred to as E320, E330, E335, and E340. As part of the project, Sound Transit acquired several parcels of property and performed demolition and cleanup of environmental contaminants as necessary to construct the project.

This report documents contaminated soil removal completed by Sound Transit to comply with the Restrictive Covenant that had been recorded for the Journal American site, located on King County tax parcel number 2825059191, at 1625 132nd Avenue NE in Bellevue, Washington (“the Site”). The location of the Site is shown on Figure 1. The Site is currently identified as a confirmed contaminated site by the Washington State Department of Ecology (Ecology) and is assigned Facility Site ID #2558.

The Site is identified by Sound Transit as parcel EL299 in the construction documents and is part of the E340 segment being constructed under Sound Transit Contract No. RTA/CN 0168-15. INNOVEX Environmental Management, Inc. (INNOVEX) conducted activities related to the contaminated soil removal and prepared this report as a subcontractor to Sound Transit’s prime contractor, HDR.

The contaminated soil removal was performed to comply with the Restrictive Covenant that was recorded for the Site in 1996 (Appendix A). The Covenant contained the following statement:

“In the event the cement flooring and foundation of the press building or the loading dock are demolished, all total petroleum hydrocarbon (TPH) contaminated soils above applicable Washington Administrative Code (WAC) 173-340-700 through 173-340-760 cleanup standards shall be removed and disposed of in accordance with applicable law or, in the alternative, appropriate sampling and testing shall be completed that documents that the remaining TPH contaminated soils are below applicable cleanup criteria. A report documenting these facts shall be submitted to Ecology or its successor agency for review and approval.”

The contaminated soil removal was performed in a manner generally consistent with the requirements of the Washington State Model Toxics Control Act (MTCA) Cleanup Regulation (Ecology, 2007), including section 173-340-515 (independent remedial actions), and section 173-340-300 (site discovery and reporting).

1.1 Objective

The primary objective of the work described in this report was to remove petroleum hydrocarbon-contaminated soil in order to obtain Ecology consent to release the Restrictive Covenant. INNOVEX completed the following tasks to meet this objective:

- Revised the contaminated soil area boundaries shown in the Restrictive Covenant based on current MTCA Method A Cleanup Levels (CULs)
- Included additional areas of contaminated soil discovered since the Restrictive Covenant was recorded
- Observed and documented removal of contaminated soils
- Collected representative confirmation soil samples for laboratory analysis to document contaminated soil removal
- Reviewed soil sample analytical results and compared detected analyte concentrations to applicable CULs

Selected photographs taken during the Site activities are provided in Appendix B. Laboratory analytical reports are provided in Appendix C. Soil disposal tickets are provided in Appendix D.

1.2 General Site information

This property is 1.62 acres in size and previously included a large building and surface parking lot. The building was demolished in July 2017 as part of the East Link light rail construction. The building had been used for various commercial businesses and appeared to include one or more additions.

The property is located within the Puget Sound Basin, a broad, low-lying region between the Cascade Range to the east and the Olympic Mountains to the west. The existing topography and regional geology have been largely shaped by glacial activity. The region is mostly underlain by Vashon till, a light-gray virtually unsorted, unstratified compact mixture of boulders, cobbles, sand, silt, and clay that can be up to 150 feet thick.

The regional geology consists of a sequence of glacially consolidated soils overlying bedrock. The underlying soils were consolidated under the weight of glaciers and became generally very hard and/or compact. Surface soils in the subject property area generally consist of mixtures of sand, silt, and gravel of varying thickness and distribution.

Topography at the Site slopes to the southwest. Shallow soil consists mostly of sand, intermixed with gravel and silt.

Groundwater levels in this area range from about 5 to 15 feet below ground surface (bgs). Groundwater flow in this portion of the Puget Lowland is generally toward the south.

Goff Creek is located adjacent to the east of the site and flows southward.

1.3 Current Site Use

The Site is currently part of the E340 segment being constructed as part of the Sound Transit East Link light rail corridor through Bellevue, Washington. Upon completion of the East Link light

rail construction in 2023, property ownership will be transferred to the City of Bellevue, which intends to use the property for transit-oriented development that includes accommodation for a 300-stall park-and-ride facility.

2.0 SITE HISTORY

The Site was originally part of a larger parcel occupied by Whitescarver Brothers Trucking and the Ace Bulldozing Company, and then by the Journal American newspaper printing and publishing facility, with an address of 1705 132nd Avenue NE. The press building was constructed in 1983 on the southern portion of the property that was historically used by the trucking and bulldozing companies. The southern portion (EL299) became a separate parcel with a separate address of 1625 132nd Avenue NE. The last known use of the Site was as an Arnold's Appliance store and warehouse. Petroleum hydrocarbon contamination was identified on the EL299 parcel only. The northern parcel had been erroneously included in the Restrictive Covenant and Ecology consented to recording a Release of Restrictive Covenant for that parcel.

Petroleum hydrocarbon-contaminated soils were encountered at the Journal American press building facility in two areas where underground storage tanks (USTs) had been decommissioned and at an associated fuel dispensing island (CH2M Hill, 1995). One UST area was north of the press building (north UST area). This area consisted of two 5,000-gallon gasoline storage tanks. The other tank area was located south of the press building (south UST area); this area consisted of a single tank. The fuel dispensing island for this tank was located beneath the press building in the area of the maintenance bay. Details regarding the Site investigation history are presented in the following sections.

2.1 1994 Site Investigations

Subsurface investigations were conducted at the Site between 1994 and 1995 (CH2M Hill, 1995). Initially, 12 borings and one test pit were completed to investigate soil in the two UST areas. In addition, four shallow soil borings were completed around the printing press. Sample results from the initial borings and test pit detected petroleum-related contamination in soils in both UST areas. Approximately 75 tons of petroleum hydrocarbon-contaminated soil was removed from the north UST area. Soil samples collected from the sidewalls and bottom of the excavation confirmed removal of the contamination. No additional investigation or remedial action in the vicinity of the north UST area is known.

Four groundwater monitoring wells were installed in the south UST area to evaluate the possible presence of petroleum hydrocarbons in groundwater (CH2M Hill, 1995). A groundwater monitoring program was implemented after gasoline, diesel, and xylene were detected at concentrations above the MTCA CUL for groundwater in a water sample taken from an open borehole drilled within the press building. However, monthly groundwater sampling conducted from September 1994 through February 1995 detected no petroleum-related contaminants in groundwater at concentrations that approached or exceeded MTCA Method A CULs.

Subsequently, 60 soil borings were completed within the press building and south of the press building to further delineate the horizontal and vertical extent of petroleum hydrocarbon contamination in the south UST area (CH2M Hill, 1995) (Figure 2). Approximately 40 tons of petroleum hydrocarbon-contaminated soil were removed from the area immediately south of the press building. Additional soil removal in this area was not possible due to concerns regarding the structural stability of the adjacent press building foundation wall.

2.2 Restrictive Covenant

Based on the investigation results, Site use, surface cover, and CULs, it was determined that the Site was eligible for a No Further Action (NFA) determination if a Restrictive Covenant was recorded for the property. The Restrictive Covenant was recorded in 1996, it is provided in Appendix A. Selected requirements of the Restrictive Covenant that are pertinent to contaminated soil removal are summarized below:

- Written notification must be given to Ecology or its successor agency before excavating, moving, or removing the soils or material beneath the press building, loading dock, and asphalt paving which are capped by these structures.
- In the event the cement flooring and foundation of the press building or the loading dock are demolished, all TPH contaminated soils above applicable WAC 173-340-700 through 173-340-760 cleanup standards shall be removed and disposed of in accordance with applicable law or, in the alternative, appropriate sampling and testing shall be completed that documents that the remaining TPH contaminated soils are below applicable cleanup criteria. A report documenting these facts shall be submitted to Ecology or its successor agency for review and approval.
- Upon remediation (by removal or otherwise) of the petroleum contaminated soil to below those levels set forth in WAC 173-340-700 through 173-340-760, the owner may record an instrument stating that this Restrictive Covenant is of no further force or effect, provided the owner has the consent of Ecology or its successor agency to so do.

The Restrictive Covenant includes a figure outlining two separate areas of TPH contamination in the south UST area, based on the 1995 MTCA Method A CULs. However, it does not distinguish between soil contaminated with gasoline range hydrocarbons (TPH-g) and diesel range hydrocarbons (TPH-d) (Appendix A). The currently applicable CUL of 100 milligrams per kilogram (mg/kg) for TPH-g is unchanged since 1995; therefore, the area of gasoline contaminated soil is unchanged. The CUL for TPH-d was changed in 2001 from 200 mg/kg to 2,000 mg/kg. The areas of TPH-d contamination were, therefore, revised to reflect this change. The original and revised contaminated soil areas are shown on Figure 2. The revised boundaries of the two separate areas of contaminated soil are referred to as Area 1 and Area 2.

Ecology issued the NFA letter on October 7, 1996, after the Restrictive Covenant was recorded. The NFA determination letter is included as Appendix E.

2.3 Department of Ecology Periodic Reviews

Ecology conducts periodic reviews of post-cleanup site conditions and monitoring data to ensure that human health and the environment are being protected at the Site (Ecology, 2009 and 2014). The following conclusions were presented in the 2009 and 2014 reviews:

- The cleanup actions completed at the Site appear to be protective of human health and the environment.
- Soils CULs had not been met at the standard point of compliance for the Site; however, the cleanup action has been determined to comply with cleanup standards since the long-term integrity of the containment system is ensured, and the requirements for containment technologies are being met.
- The Restrictive Covenant for the property is in place and continues to be effective in protecting public health and the environment from exposure to hazardous substances and protecting the integrity of the cleanup action.

Based on the periodic reviews, Ecology concluded that the requirements of the Restrictive Covenant were being met. No additional cleanup actions were required.

2.4 2017 Site Investigations

In 2017, there were two soil investigations at the Site. Sound Transit commissioned an investigation by Shannon and Wilson, Inc. (S&W) (S&W, 2017), and the City of Bellevue retained Parametrix (Parametrix, 2017) to perform additional investigations across a broader area that included the Site. These investigations largely confirmed the results of the previous investigations as documented in the Restrictive Covenant; however, each investigation identified a new area of TPH-d contaminated soil.

The S&W investigation was completed to evaluate the presence of contaminants identified during previous environmental investigations (S&W, 2017). Only one boring (GP-2-17) contained contaminants in soil exceeding the applicable MTCA CULs. This resulted in identification of an area of TPH-d contaminated soil beneath the southwest corner of the former building that was not identified in the Restrictive Covenant. This additional area of contaminated soil is referred to as Area 3 in this report. The soil sample locations from the S&W investigation are shown on Figure 3.

The Parametrix investigation was completed as part of the City of Bellevue's due diligence in response to potentially acquiring the property from Sound Transit (Parametrix, 2017). The investigation identified TPH-d contaminated soil in the northeast corner of the Site that was not identified in the Restrictive Covenant. The area of contaminated soil identified by this investigation is referred to as Area 4 in this report. The soil sample locations and results from this investigation are shown on Figure 4.

The additional areas of TPH-d contamination identified during the 2017 investigations (Areas 3 and 4) are shown on Figure 5.

3.0 CLEANUP LEVELS

CULs specified in the MTCA Cleanup Regulation (Ecology, 2007) were used to evaluate analytical results for the Site contaminants of concern: TPH-g, TPH-d, and oil range hydrocarbons (TPH-o). Detected analyte concentrations in soil were compared to MTCA Method A Soil CULs for Unrestricted Land Uses. The MTCA CULs used to evaluate each detected analyte are included with analytical results provided in Tables 1 and 2.

4.0 CONTAMINATED SOIL REMOVAL

In August 2018, Sound Transit provided Ecology with written notification of their intent to excavate the contaminated soil, as required by the Restrictive Covenant.

A total of four contaminated areas (Areas 1 through 4) were identified at the Site (Figure 5). Areas 1 and 2 are those areas identified in the Restrictive Covenant. Areas 3 and 4 are those areas identified in 2017. Although soil in Areas 3 and 4 was not required to be removed to be in compliance with the Restrictive Covenant, Sound Transit elected to remove the soil in these areas at the same time as Areas 1 and 2 to ensure proper segregation and disposal and to avoid future delays during construction.

On January 10, 2019, KLB Construction, Inc. (KLB) excavated six exploratory test pits to confirm the location of Area 1. INNOVEX collected six soil samples from these test pits for screening purposes. Based on analytical results, soil from five of the six test pits was excavated and stockpiled. One sample (E340-EL299-190110-SW01) confirmed the western boundary of Area 1 and was used as a sidewall confirmation sample for the subsequent excavation. Excavated soil was screened and segregated as described below.

From January 16 to February 19, 2019, KLB performed excavation activities. INNOVEX was onsite to help guide the contaminated soil removal by field screening using a photoionization detector (PID). Field screening was conducted in accordance with the Sampling and Analysis Plan (SAP) prepared for this project (INNOVEX, 2018). The excavations extended to approximately 13 feet bgs at Area 1, 18 feet bgs at Area 2, 12.5 feet bgs at Area 3, and 10 feet bgs at Area 4. The final extent of each excavation is shown on Figure 6. Selected photographs taken during the contaminated soil removal activities are provided in Appendix B.

Surface soil consisted of fill material primarily composed of poorly sorted, gray-brown to tan, gravelly to silty sand with woody debris. The fill extended to depths between 6 and 7 feet bgs. Below the fill, soils generally consisted of poorly sorted, gray-tan, gravelly to silty sand, which extended to approximately 14 feet bgs. At that depth, compacted, gray, glacial till was encountered. In Area 4, a layer of peat was encountered at approximately 6 feet bgs.

Excavated soil was screened using a PID to segregate and stockpile clean, impacted, and contaminated soil. O'Neill Service Group (OSG) collected soil stockpile samples to determine disposal and re-use alternatives. A total of 223 tons of excavated soil and 91 tons of concrete debris was removed from the Site and transported to Cadman in Everett, Washington for disposal. Soil disposal tickets are provided in Appendix D. A total of 2,333 tons of excavated soil was determined by OSG to be acceptable for use as backfill in the excavation consistent with Ecology guidance (Ecology, 2016a). Analytical results for samples from excavated soil stockpiles are shown in Table 1 and the associated laboratory analytical reports are provided in Appendix C.

Groundwater was not encountered in any of the excavations.

5.0 SAMPLING AND ANALYSIS

After the contaminated soil was removed, confirmation soil samples were collected from the sidewalls and floors of the excavations. Samples were collected from the excavator bucket using disposable sampling equipment, in accordance with the SAP prepared for this project (INNOVEX, 2018). Sample collection frequency for each excavation was consistent with the Ecology Guidance for Remediation of Petroleum Contaminated Sites (Ecology, 2016a).

A total of 34 confirmation soil samples were collected and analyzed (24 excavation sidewall samples and 10 excavation floor samples).

In Area 1, excavation sidewall samples were collected at the nodes (corners) of the Area and no more than 15 feet apart. Otherwise, excavation sidewall samples were collected at a nominal frequency of one sample for every 20 linear feet, and excavation floor samples were collected at a nominal frequency of one sample for every 400 square feet. Soil sample locations are shown on Figure 6.

In Areas 2, 3, and 4, one sample was collected from each excavation sidewall and one sample was collected from each excavation floor. Soil sample locations are shown on Figure 6.

Soil samples were placed into laboratory-supplied containers, labeled, and immediately placed in a cooler with ice. Samples were delivered under standard chain-of-custody procedures to OnSite Environmental, Inc. (OnSite), a Washington State-accredited laboratory located in Redmond, Washington.

Based on the Restrictive Covenant, Ecology's Periodic Reviews, and previous investigations conducted at the Site, soil samples were submitted for the following analyses:

- TPH-g using Method NWTPH-Gx
- TPH-d and TPH-o using Method NWTPH-Dx

The laboratory performed a silica gel cleanup to remove interference from naturally occurring organic matter in the Site Soil.

6.0 ANALYTICAL RESULTS

6.1 Quality

Analytical data reports from OnSite were reviewed by INNOVEX. Laboratory-provided data quality parameters were reviewed. Data for TPH-g, TPH-d, and TPH-o were determined by INNOVEX to be acceptable for all purposes following evaluation of the quality control specifications presented in the SAP, or equivalent requirements found in the contracted commercial laboratory analytical methods. Precision and accuracy parameters were evaluated for each method, as well as temperature and holding time requirements.

OnSite followed the Ecology approved analytical methods. Precision was acceptable as demonstrated by the reported relative percent difference (RPD) values for matrix spike/matrix spike duplicates (MS/MSDs) and laboratory control sample/laboratory control sample duplicates (LCS/LCSDs). Accuracy was also acceptable, as demonstrated by the reported percent recovery values for surrogates, MS/MSDs, and LCS/LCSDs.

Two pairs of field duplicate samples were collected to assess precision of the sampling technique and instrument performance, as well as variability possibly caused by the heterogeneity of the matrix being sampled. Acceptable precision was demonstrated by the RPD values for the field duplicate sample results.

One duplicate sample was collected with OSG during soil stockpile sampling. Acceptable quality was demonstrated by the RPD values for the duplicate sample results for TPH-d and TPH-o, however the results for TPH-g are significantly different with an RPD of 187% (Table 1). This difference is likely due to the heterogeneous distribution of TPH-g in the soil and because INNOVEX used US Environmental Protection Agency (EPA) Method 5035 for sample collection while OSG used EPA Method 5030. Using Method 5035 for collecting the sample would reduce volatilization of TPH-g and can produce a higher analytical result (Ecology, 2004).

6.2 Results

INNOVEX collected a total of 34 confirmation soil samples to document site conditions after contaminated soil was removed. Analytical results for the confirmation samples represent concentrations in soil remaining in place at the Site. None of the confirmation soil samples contained TPH-g, TPH-d, or TPH-o at concentrations above applicable MTCA CULs (Table 2).

TPH-g was not detected in any of the confirmation soil samples. TPH-d was detected in 10 of the 34 confirmation soil samples with a maximum concentration of 860 mg/kg, which is below the applicable MTCA CUL of 2,000 mg/kg. TPH-o was detected in 3 of the 34 confirmation soil samples with a maximum concentration of 800 mg/kg, which is below the applicable MTCA CUL of 2,000 mg/kg.

Laboratory results for confirmation samples are shown in Table 2. Soil sample locations are shown on Figure 6. The laboratory analytical reports are provided in Appendix C.

7.0 SITE DISPOSITION

Excavation at the Site was conducted between January 16 and February 19, 2019. After laboratory analytical results confirmed the complete removal of contaminated soil, the excavations were backfilled to meet the requirements of the East Link light rail construction project. The excavations were backfilled with excavation spoils and imported fill.

8.0 SUMMARY AND CONCLUSIONS

The following conclusions are supported by the activities described above:

- The contaminated soil excavation conducted by Sound Transit resulted in the removal of approximately 223 tons of contaminated soil and 91 tons of concrete debris from the Site.
- Analysis of confirmation soil samples indicates that residual concentrations of TPH-d and TPH-o remain in soil, but at concentrations well below applicable MTCA CULs (Table 2).
- Analysis of confirmation soil samples indicates that no detectable concentrations of TPH-g remain at the Site (Table 2).
- Groundwater was not encountered and no assessment of groundwater was completed.

The extent of soil contamination identified as Areas 1 through 4 was confirmed by the removal of the contaminated soil and the results of confirmation soil sampling at the excavation limits.

9.0 RECOMMENDATIONS

Based on the findings and conclusions of the excavation and sampling effort, the contaminants that are described in the Restrictive Covenant have been removed; therefore, the Restrictive Covenant should be removed from the Site. INNOVEX recommends that Sound Transit and the City of Bellevue coordinate with the Department of Ecology Site Manager to determine the appropriate actions to remove the Restrictive Covenant from the Property. The removal of the covenant should be in accordance with the Ecology Toxics Cleanup Program Procedure 440C: Releasing Environmental Covenants under the Model Toxics Control Act (Ecology, 2016b).

10.0 LIMITATIONS

This report is for the exclusive use of Sound Transit, City of Bellevue, and their representatives. INNOVEX prepared this report in a professional manner, using that level of skill and care normally exercised for similar projects under similar conditions by reputable and competent environmental consultants currently practicing in the area, and in accordance with the terms and conditions set forth in our contract and Sound Transit Contract RTA/CN 0168-15. INNOVEX is not responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not

fully disclosed at the time the report was prepared. Also note that the facts and conditions referenced in this report may change over time and that the conclusions set forth here are applicable to the facts and conditions as described in this report. Conclusions were made within the operative constraints of the scope, budget, and schedule for this project. We believe that the conditions stated here are factual. No guarantee is made or implied. Any reliance on this report by a third party is at such party's sole risk.

Bellevue, Washington 98004

RE: Restrictive Covenant Recorded Under King County Recording No. 9609271199

Dear Mr. Horvitz and Mr. O'Brien:

The Washington State Department of Ecology (Ecology) has received a request from Northwest Media (Washington), L.P. and OB Bellevue Properties, LLC (together, the "Owners") for Ecology's consent to release the above referenced restrictive covenant (the "Restrictive Covenant") on that certain real property commonly known as 1705 132nd Avenue NE, Bellevue, Washington (the "1705 Property"). The Owners are making the request because the Restrictive Covenant was erroneously recorded against the 1705 Property together with that certain real property commonly known as 1625 132nd Avenue NE, Bellevue, Washington (the "1625 Property"). We have reviewed the Owners' request and the information provided. Ecology agrees that the Restrictive Covenant properly encumbers the 1625 Property but not the 1705 Property. Accordingly, Ecology hereby consents to the release of the 1705 Property from the Restrictive Covenant.

Please provide Ecology with copies of all documents recorded pertaining to the release of 1705 Property from the Restrictive Covenant.

Regards,

A handwritten signature in black ink, appearing to read "Joseph M. Hickey".

RECITALS

- A. Northwest Media (Washington), L.P., an Ohio limited partnership ("NMW") owns that certain real property commonly known as 1705 132nd Avenue, Bellevue, King County, Washington ("Parcel A").
- B. O.B. Bellevue Properties, LLC, a Washington limited liability company ("OB"), as successor in interest to OB Bellevue Properties II, LLC, owns that certain real property immediately adjacent to Parcel A, commonly known as 1625 132nd Avenue NE, Bellevue, Washington ("Parcel B"). Parcel A and Parcel B are legally described on Exhibit A attached hereto.
- C. NMW is the previous owner of Parcel B. NMW conveyed Parcel B to OB on or about April 1, 2003 under that certain Special Warranty Deed recorded on April 1, 2003 as Auditor's File No. 20030401002879, King County, Washington.
- D. Parcel A and Parcel B are encumbered by that certain Restrictive Covenant, dated September 25, 1996 and recorded under Auditor's File No. 9609271199, King County, Washington (the "Restrictive Covenant"). The Restrictive Covenant sets forth certain use restrictions for property identified as "the press building of the Journal American Newspaper property" as a result of soil contamination. The map attached to the Restrictive Covenant indicates that the contaminated soil is located on Parcel B only. The map does not indicate any contamination on Parcel A.
- E. NMW and OB requested a letter from the Washington State Department of Ecology ("DOE") consenting to the release of the Restrictive Covenant from Parcel A. DOE provided NMW and OB with a letter dated April 26, 2005 (the "Consent") that acknowledges that the Restrictive Covenant was erroneously recorded against Parcel A and consenting to the release of Parcel A from the Restrictive Covenant. A copy of the Consent is attached hereto as Exhibit B.

RELEASE

- 1. NMW and OB hereby release the Restrictive Covenant on Parcel A.
- 2. OB acknowledges and agrees that the Restrictive Covenant still encumbers Parcel B and remains in full force and effect, unmodified and unchanged by this Release of Restrictive Covenant.
- 3. This instrument may be executed in any number of counterparts, each of which, when executed and delivered, will be deemed to be an original, and all of which taken together will be deemed to be but one and the same instrument.

RESTRICTIVE COVENANT

Notice is hereby given that the property described on Exhibit "A" attached hereto and known as, the press building of The Journal American newspaper property, located at 1705 132nd Avenue, Bellevue, Washington, 98005, has been the subject of an Independent Remedial Action conducted under Wash. Rev. Code Section 70.105D (1993). Certain of the on-site soils are contaminated with petroleum hydrocarbons and are capped by the press building and its parking lot area, as depicted by Figures 6 through 9 of the INDEPENDENT REMEDIAL ACTION REPORT: The Journal American Facility, Bellevue, Washington (the "Report"), prepared by CH2M HILL, dated August 1995 and submitted to the Washington Department of Ecology's (WDOE), Northwest Region, Bellevue Washington. At the time of the Report, the maximum residual soil concentration of total petroleum hydrocarbon (TPH) gasoline was 1,200 milligrams per kilogram (mg/kg) at boring locations B04 at the 10 foot depth and B10 at the 7.5 foot depth and the maximum residual concentration of TPH diesel was 12,000 mg/kg at B04 at the 10 foot depth. These maximum soils concentrations exceed the Washington State Models Toxics Control Act (MTCA) Level A cleanup standards of 100 mg/kg gasoline in soil and 200 mg/kg diesel in soil. Until such time as this covenant is removed according to its terms, use of this property is restricted in accordance with Wash. Admin. Code (WAC) 173-340-440, which is incorporated here by reference, as follows:

9609271199

- a) No activities may be conducted at the property that may interfere with the groundwater monitoring and the continued protection of the Independent Remedial Action;
- b) No activities may be conducted that may result in the release of the petroleum hydrocarbon contamination capped by the press building, loading dock and asphalt paving identified as capping the petroleum hydrocarbon contamination in Figures 6 through 9 above;
- c) Water well(s) shall not be installed on the property for purpose of domestic water use;
- d) Written notification must be given to the WDOE or its successor agency before excavating, moving or removing the soils or material beneath the press building, loading dock, and asphalt paving which are capped by these structures. In the event the cement flooring and foundation of the press building or the loading dock are demolished, all TPH contaminated soils above applicable WAC 173-340-700 through 173-340-760 cleanup standards shall be removed and disposed of in accordance with applicable law or, in the alternative, appropriate sampling and testing shall be completed that documents that the remaining TPH contaminated soils are below applicable cleanup criteria. A report documenting

1995-11-15 01:18:00 PM KING COUNTY RECORDS 005 SH 12:00

these facts shall be submitted to WDOE or its successor agency for review and approval.

- e) Written notification must be given to WDOE or its successor agency before removal or destruction of those areas of the existing press building, loading dock, or asphalt paving identified as capping the petroleum hydrocarbon contamination in Exhibit "B";
- f) Written notification must be given to the WDOE or its successor agency of owner's intent to convey any interest in the property. Further, no conveyance of title, easement, lease, or other interest in the property will be consummated by the owner of the property without notice of this Restrictive Covenant;
- g) The owner must notify WDOE or its successor agency, prior to any use of the property that is inconsistent with the terms of this Restrictive Covenant.
- h) The WDOE or successor agency or its designated representative shall have the right to enter the property after 24-hour prior notice, at reasonable times for the purpose of evaluating compliance with the terms of this Restrictive Covenant, to take samples and to inspect records related to the Independent Remedial Action;
- i) Upon remediation (by removal or otherwise) of the petroleum contaminated soil to below those levels set forth in Wash. Admin. Code 173-340-700 through 173-340-760, the owner may record an instrument stating that this restrictive covenant is of no further force or effect, provided the owner has the consent of the WDOE or its successor agency to so do.

9609271199

IN WITNESS WHEREOF, the undersigned has executed this instrument as of the 25 day of September, 1996.

Re: Analytical Data for Project 40300-E340-EL299
Laboratory Reference No. 1901-085

Dear Glenn:

Enclosed are the analytical results and associated quality control data for samples submitted on January 10, 2019.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal stroke extending to the right.

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: January 11, 2019
Samples Submitted: January 10, 2019
Laboratory Reference: 1901-085
Project: 40300-E340-EL299

Case Narrative

Samples were collected on January 10, 2019 and received by the laboratory on January 10, 2019. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
 - B - The analyte indicated was also found in the blank sample.
 - C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
 - E - The value reported exceeds the quantitation range and is an estimate.
 - F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
 - H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
 - I - Compound recovery is outside of the control limits.
 - J - The value reported was below the practical quantitation limit. The value is an estimate.
 - K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
 - L - The RPD is outside of the control limits.
 - M - Hydrocarbons in the gasoline range are impacting the diesel range result.
 - M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
 - N - Hydrocarbons in the lube oil range are impacting the diesel range result.
 - N1 - Hydrocarbons in diesel range are impacting lube oil range results.
 - O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
 - P - The RPD of the detected concentrations between the two columns is greater than 40.
 - Q - Surrogate recovery is outside of the control limits.
 - S - Surrogate recovery data is not available due to the necessary dilution of the sample.
 - T - The sample chromatogram is not similar to a typical _____.
 - U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
 - U1 - The practical quantitation limit is elevated due to interferences present in the sample.
 - V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
 - W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
 - X - Sample extract treated with a mercury cleanup procedure.
 - X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
 - Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
 - Z -
- ND - Not Detected at PQL
 PQL - Practical Quantitation Limit
 RPD - Relative Percent Difference

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
 - B - The analyte indicated was also found in the blank sample.
 - C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
 - E - The value reported exceeds the quantitation range and is an estimate.
 - F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
 - H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
 - I - Compound recovery is outside of the control limits.
 - J - The value reported was below the practical quantitation limit. The value is an estimate.
 - K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
 - L - The RPD is outside of the control limits.
 - M - Hydrocarbons in the gasoline range are impacting the diesel range result.
 - M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
 - N - Hydrocarbons in the lube oil range are impacting the diesel range result.
 - N1 - Hydrocarbons in diesel range are impacting lube oil range results.
 - O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
 - P - The RPD of the detected concentrations between the two columns is greater than 40.
 - Q - Surrogate recovery is outside of the control limits.
 - S - Surrogate recovery data is not available due to the necessary dilution of the sample.
 - T - The sample chromatogram is not similar to a typical _____.
 - U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
 - U1 - The practical quantitation limit is elevated due to interferences present in the sample.
 - V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
 - W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
 - X - Sample extract treated with a mercury cleanup procedure.
 - X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
 - Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
 - Z -
- ND - Not Detected at PQL
 PQL - Practical Quantitation Limit
 RPD - Relative Percent Difference

Re: Analytical Data for Project 40300-E340-EL299
Laboratory Reference No. 1901-154

Dear Glenn:

Enclosed are the analytical results and associated quality control data for samples submitted on January 18, 2019.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal stroke extending to the right.

David Baumeister
Project Manager

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: January 21, 2019
Samples Submitted: January 18, 2019
Laboratory Reference: 1901-154
Project: 40300-E340-EL299

Case Narrative

Samples were collected on January 18, 2019 and received by the laboratory on January 18, 2019. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
 - B - The analyte indicated was also found in the blank sample.
 - C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
 - E - The value reported exceeds the quantitation range and is an estimate.
 - F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
 - H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
 - I - Compound recovery is outside of the control limits.
 - J - The value reported was below the practical quantitation limit. The value is an estimate.
 - K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
 - L - The RPD is outside of the control limits.
 - M - Hydrocarbons in the gasoline range are impacting the diesel range result.
 - M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
 - N - Hydrocarbons in the lube oil range are impacting the diesel range result.
 - N1 - Hydrocarbons in diesel range are impacting lube oil range results.
 - O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
 - P - The RPD of the detected concentrations between the two columns is greater than 40.
 - Q - Surrogate recovery is outside of the control limits.
 - S - Surrogate recovery data is not available due to the necessary dilution of the sample.
 - T - The sample chromatogram is not similar to a typical _____.
 - U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
 - U1 - The practical quantitation limit is elevated due to interferences present in the sample.
 - V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
 - W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
 - X - Sample extract treated with a mercury cleanup procedure.
 - X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
 - Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
 - Z -
- ND - Not Detected at PQL
 PQL - Practical Quantitation Limit
 RPD - Relative Percent Difference

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
 - B - The analyte indicated was also found in the blank sample.
 - C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
 - E - The value reported exceeds the quantitation range and is an estimate.
 - F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
 - H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
 - I - Compound recovery is outside of the control limits.
 - J - The value reported was below the practical quantitation limit. The value is an estimate.
 - K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
 - L - The RPD is outside of the control limits.
 - M - Hydrocarbons in the gasoline range are impacting the diesel range result.
 - M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
 - N - Hydrocarbons in the lube oil range are impacting the diesel range result.
 - N1 - Hydrocarbons in diesel range are impacting lube oil range results.
 - O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
 - P - The RPD of the detected concentrations between the two columns is greater than 40.
 - Q - Surrogate recovery is outside of the control limits.
 - S - Surrogate recovery data is not available due to the necessary dilution of the sample.
 - T - The sample chromatogram is not similar to a typical _____.
 - U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
 - U1 - The practical quantitation limit is elevated due to interferences present in the sample.
 - V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
 - W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
 - X - Sample extract treated with a mercury cleanup procedure.
 - X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
 - Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
 - Z -
- ND - Not Detected at PQL

Re: Analytical Data for Project 40300-E340.03b
Laboratory Reference No. 1901-187

Dear Glenn:

Enclosed are the analytical results and associated quality control data for samples submitted on January 23, 2019.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal stroke extending to the right.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: January 24, 2019
Samples Submitted: January 23, 2019
Laboratory Reference: 1901-187
Project: 40300-E340.03b

Case Narrative

Samples were collected on January 23, 2019 and received by the laboratory on January 23, 2019. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

 - N - Hydrocarbons in the lube oil range are impacting the diesel range result.
 - N1 - Hydrocarbons in diesel range are impacting lube oil range results.
 - O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
 - P - The RPD of the detected concentrations between the two columns is greater than 40.
 - Q - Surrogate recovery is outside of the control limits.
 - S - Surrogate recovery data is not available due to the necessary dilution of the sample.
 - T - The sample chromatogram is not similar to a typical _____.
 - U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
 - U1 - The practical quantitation limit is elevated due to interferences present in the sample.
 - V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
 - W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
 - X - Sample extract treated with a mercury cleanup procedure.
 - X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
 - Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
 - Z -
- ND - Not Detected at PQL
 PQL - Practical Quantitation Limit
 RPD - Relative Percent Difference

Re: Analytical Data for Project 40300.E340.03b
Laboratory Reference No. 1902-079

Dear Glenn:

Enclosed are the analytical results and associated quality control data for samples submitted on February 14, 2019.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal stroke extending to the right.

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: February 15, 2019
Samples Submitted: February 14, 2019
Laboratory Reference: 1902-079
Project: 40300.E340.03b

Case Narrative

Samples were collected on February 14, 2019 and received by the laboratory on February 14, 2019. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
 - B - The analyte indicated was also found in the blank sample.
 - C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
 - E - The value reported exceeds the quantitation range and is an estimate.
 - F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
 - H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
 - I - Compound recovery is outside of the control limits.
 - J - The value reported was below the practical quantitation limit. The value is an estimate.
 - K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
 - L - The RPD is outside of the control limits.
 - M - Hydrocarbons in the gasoline range are impacting the diesel range result.
 - M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
 - N - Hydrocarbons in the lube oil range are impacting the diesel range result.
 - N1 - Hydrocarbons in diesel range are impacting lube oil range results.
 - O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
 - P - The RPD of the detected concentrations between the two columns is greater than 40.
 - Q - Surrogate recovery is outside of the control limits.
 - S - Surrogate recovery data is not available due to the necessary dilution of the sample.
 - T - The sample chromatogram is not similar to a typical _____.
 - U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
 - U1 - The practical quantitation limit is elevated due to interferences present in the sample.
 - V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
 - W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
 - X - Sample extract treated with a mercury cleanup procedure.
 - X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
 - Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
 - Z -
- ND - Not Detected at PQL
 PQL - Practical Quantitation Limit
 RPD - Relative Percent Difference

RE: E340

Work Order Number: 1901256

January 22, 2019

Attention Eric Laumbattus:

Fremont Analytical, Inc. received 3 sample(s) on 1/18/2019 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Gasoline by NWTPH-Gx

Sample Moisture (Percent Moisture)

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Mike C. Ridgeway".

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Required
6. Was an attempt made to cool the samples? Yes No NA
- Received straight from field.**
7. Were all items received at a temperature of >0°C to 10.0°C * Yes No NA
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
- MeOH VOAs extracted.
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

RE: E340-EL299

Work Order Number: 1901298

January 24, 2019

Attention Scott Darst:

Fremont Analytical, Inc. received 10 sample(s) on 1/23/2019 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Gasoline by NWTPH-Gx

Sample Moisture (Percent Moisture)

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Mike C. Ridgeway", written in a cursive style.

Mike Ridgeway
Laboratory Director

Project: E340-EL299

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Required
6. Was an attempt made to cool the samples? Yes No NA
7. Were all items received at a temperature of >0°C to 10.0°C * Yes No NA
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

RE: (KLB EL299)

Work Order Number: 1901385

February 04, 2019

Attention Scott Darst:

Fremont Analytical, Inc. received 6 sample(s) on 1/30/2019 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Gasoline by NWTPH-Gx

Sample Moisture (Percent Moisture)

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Mike C. Ridgeway", written in a cursive style.

Mike Ridgeway
Laboratory Director

Project: (KLB EL299)

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Required
6. Was an attempt made to cool the samples? Yes No NA
7. Were all items received at a temperature of >0°C to 10.0°C * Yes No NA
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

RE: EL299 KLB
Work Order Number: 1902238

February 22, 2019

Attention Eric Laumbattus:

Fremont Analytical, Inc. received 4 sample(s) on 2/20/2019 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.
Gasoline by NWTPH-Gx
Sample Moisture (Percent Moisture)

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Mike Ridgeway
Laboratory Director

Project: EL299 KLB

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Required
6. Was an attempt made to cool the samples? Yes No NA
7. Were all items received at a temperature of >0°C to 10.0°C * Yes No NA
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

APPENDIX E
Department of Ecology No Further Action Letter

STATE OF WASHINGTON
DEPARTMENT OF ECOLOGY

Northwest Regional Office, 3190 - 160th Ave S.E. • Bellevue, Washington 98008-5452 • (206) 649-7000

October 7, 1996

Mr. Paul deVille, President
Persis Corporation
P.O. Box 3110
Honolulu, HI 96820

Dear Mr. deVille:

Re: The Journal American Site
1705 - 132nd Avenue NE, Bellevue, WA 98005

Thank you for submitting the results of your independent remedial action for Department of Ecology (Ecology) review. Ecology appreciates your initiative in pursuing this administrative option under the Model Toxics Control Act (MTCA), Ch. 70.105D RCW.

Ecology's Toxics Cleanup Program has reviewed the following documents prepared by CH2M HILL for The Journal American Site, 1705 - 132nd Avenue NE, Bellevue, Washington:

1. Independent Remedial Action Report, dated August 1995.
2. August 1995 Groundwater Sampling, dated September 21, 1995.
3. Summary of Fourth Quarter 1995 Groundwater Sampling and Asphalt Cap Installation, dated January 24, 1996.
4. Summary of First Quarter 1996 Groundwater Sampling, dated May 17, 1996.
5. Summary of Second Quarter 1996 and Short Term Performance Monitoring Sampling, dated May 31, 1996.
6. Summary of Third (Final) Quarter 1996 Groundwater Sampling, dated September 20, 1996.

The above-named reports were prepared without Ecology oversight such as would occur under an Agreed Order or Consent Decree. However, based upon the information summarized in these reports, Ecology has determined that, at this time, the release of total petroleum hydrocarbons (TPH) and benzene/ethylbenzene/toluene/xylene (BETX) into the soil and groundwater at the site no longer poses a threat to human health or the environment. Therefore, Ecology has determined that no further action is necessary at this site with regard to the release of TPH and BETX to the soil and groundwater.

Mr. Paul deVille, President
Page 2
October 7, 1996

Please be aware that because your actions were not conducted under a consent decree with Ecology, this no further action letter is not a settlement by the state under RCW 70.105D.040(4). Moreover, this determination is made only with respect to the release of TPH and BETX to the soil and groundwater at the 1705 - 132nd Avenue NE property as identified in the above-listed documents. It does not apply to any other release or potential release at the property, any other areas on the property, nor any other properties held by the Persis Corporation, Parkland Management, or The Journal American.

Ecology does not assume any liability for any release, threatened release or other conditions at the site, or for any actions taken or omitted by any person or his/her agents or employees with regard to the release, threatened release, or other conditions at the site. Ecology reserves the right to require further action at the site with regard to the soil, groundwater or other contaminated media if new or different information other than that presented in the above reports becomes known or available.

Ecology will update its Leaking Underground Storage Tank (LUST) database to reflect this no further action determination. Your site will not appear in future publications of the LUST database.

Please contact me at (206) 649-7042 if you have any questions.

Sincerely,

Elaine P. Atkinson
Environmental Scientist

EXECUTIVE SUMMARY

On behalf of the City of Bellevue, Parametrix has prepared this Phase II Environmental Site Assessment (ESA) report for the three properties located at 130th Avenue NE in Bellevue, Washington (Figure 1). The properties are known as right-of-way (ROW) lots EL296, EL297, and EL299 (Figure 2), identified by King County parcel numbers 2825059159, 2825059040, and 2825059191. Based on the findings of this investigation, Parametrix reached the following conclusions:

1. Parametrix previously completed an environmental review and Phase II ESA of the subject property and identified areas of soil and groundwater contamination.
2. Sound Transit utilized the subject properties from 2018 to 2020 for construction of the Bel-Red / 130th Avenue station. Sound Transit completed an excavation of the historical release areas in 2019. However, no post excavation groundwater analysis was performed.
3. Parametrix completed eight boreholes across the property and sampled soil and groundwater for the purpose of analyzing Sound Transit's use of the property and confirming the current conditions of the subject properties related to the historical releases.
4. All soil and water samples were found non-detect for target gasoline-range total petroleum hydrocarbons (TPH), diesel-range TPH, and benzene, toluene, ethylbenzene, and xylenes (BTEX). Oil-range TPH was found below Model Toxics Control Act (MTCA) Method A cleanup levels (CULs) in three soil samples and four groundwater samples.
5. These results appear to show de minimis impacts to the property related to Sound Transit's use and appear to confirm that areas of historical releases have been properly remediated.
6. Due to the limited nature of the Phase II ESA, there may be isolated impacts to soil and groundwater at the property that could be encountered during redevelopment. However, concentrations are anticipated to be below applicable MTCA Method A CULs based on the results of this Phase II ESA.

Based on the conclusions of this investigation, Parametrix offers the following recommendations:

1. If the property is redeveloped, it is recommended that a contaminated media management plan (CMMP) be prepared for the subject properties to guide excavation and construction activities that describes potential contaminants, notification procedures, safety precautions, handling, storage, and sampling of the contaminated materials. In addition, since the depth of groundwater is less than 10 feet below ground surface (bgs), there is potential that contaminated groundwater may be encountered during excavation or trenching activities for subsurface structures. Therefore, the CMMP should address handling, management, and disposal of groundwater during construction activities.
2. A restrictive covenant remains for the property related to the historical soil contamination. The contamination was reported to Ecology to have been removed by Sound Transit. It may be prudent to enter the subject properties into the Ecology Voluntary Cleanup Program or Pollution Liability Insurance Agency (PLIA) Petroleum Technical Assistance Program (PTAP) to determine steps for delisting of the subject properties and removing the restrictive covenant. Completion of permanent monitoring wells and quarterly groundwater monitoring would likely be required to remove the restrictive covenant and obtain a no further action (NFA) determination from either agency with no land use restrictions.

1. INTRODUCTION

On behalf of the City of Bellevue (City), Parametrix has prepared this Phase II Environmental Site Assessment (ESA) report related to three properties located at 130th Avenue NE and NE Spring Boulevard in Bellevue, Washington (Figure 1). The subject properties are identified by King County parcel numbers 2825059159, 2825059040, and 2825059191, also known as right-of-way (ROW) lots EL296, EL297, and EL299 (Figure 2). The investigation activities were conducted to support the acquisition of the properties by the City of Bellevue from Sound Transit. The properties were previously acquired by Sound Transit for the East Link Lightrail Extension project, primarily for construction of the Bel-Red/130th Station and for use as construction staging.

The City is conducting an update of due diligence prior to transferring ownership of the subject properties from Sound Transit to the City. In July 2017, Parametrix completed an environmental analysis of the properties, which primarily included review and evaluation of previous environmental documents and supporting information (Parametrix 2017). In 2018, Parametrix completed a Phase II ESA of the properties and determined soil and groundwater conditions below the subject properties (Parametrix 2018). Since the prior Phase II ESA, Sound Transit has developed the Bel-Red/130th Station and utilized the subject properties for construction staging.

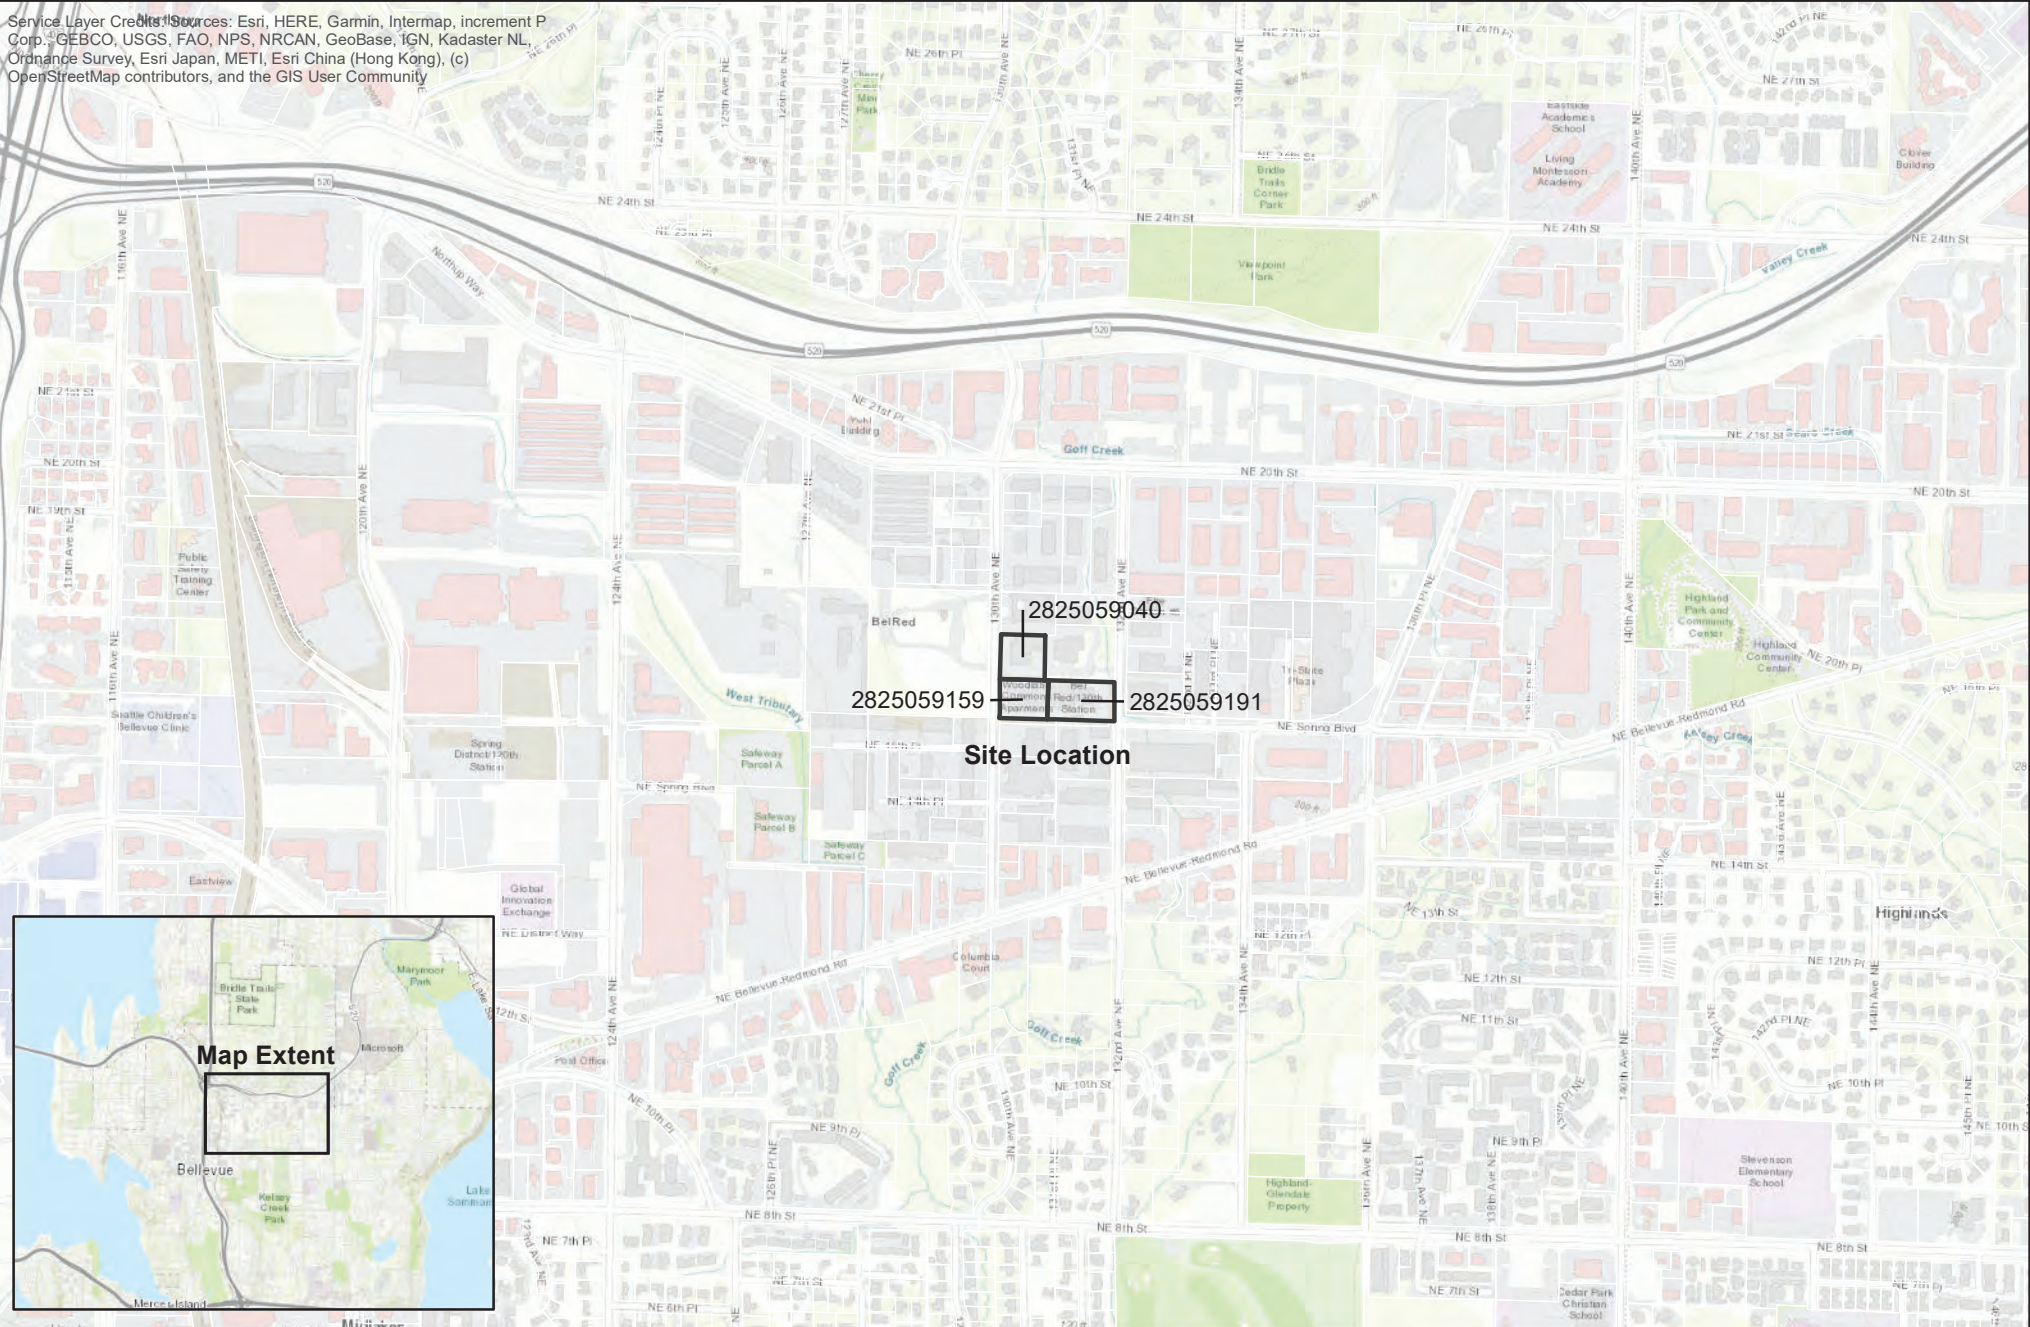

The purpose of this Phase II ESA was to evaluate potential environmental impacts of Sound Transit's use of the subject properties from 2018 to the present and update the evaluation of the previous Phase II ESA results.

This Phase II ESA was conducted in accordance with the scope of work provided to the City. Specific tasks included the collection of soil and groundwater samples from eight investigative borings (B21 through B28) on the three subject properties. Conclusions and recommendations within this report are based on observed evidence and data collected during the performance of this assessment, as well as information obtained through previous investigations or documentation, where available.

1.1 Site Location

The subject properties are located between 130th Avenue NE and 132nd Avenue NE in Bellevue, Washington (Figure 1). The subject property includes King County parcel numbers 2825059159 (1606 130th Avenue NE), 2825059040 (1700 130th Avenue NE), and 2825059191 (1625 132nd Avenue NE). The boundaries of the parcels are shown on Figure 2.

1.2 Site and Vicinity Characteristics

The subject property encompasses three parcels formerly occupied by warehouse-type structures.

The northern parcel (EL 297) was developed in 1977 with a one-story office and warehouse that had a mezzanine level. Airphone appears to have occupied the building from the time of development through approximately 2017. The building was demolished by Sound Transit in 2020.

The southwest parcel (EL296) was developed in 1962 with a single-story concrete block building. The building was primarily occupied by Stusser Electric through 2003, with several other businesses renting space from the 1970's through 2013. The building was demolished by Sound Transit in 2017.

The southeast parcel (EL299) was developed in 1969 and occupied by Ace Bulldozing. Two 5,000-gallon heating-oil underground storage tanks (USTs) were present on the northwest corner of the historical building. In 1983, Journal American developed a new press facility on the southeast parcel. The new facility used a fuel-dispensing UST below the southern portion of the press building within a maintenance bay area. The building was demolished in 2017 by Sound Transit.

The three parcels have been used as a construction site and staging area for Sound Transit during the construction of the Bel-Red/130th Station adjacent south of the subject properties through November 2020. Sound Transit's use of the property included development of a street sweeping disposal pond, vehicle wheel wash, equipment storage, clearing, and grading of the subject properties.

1.3 Physical Setting

The subject properties are located within the Bel-Red neighborhood of Bellevue within the Northeast quarter of Section 28, Township 25 North, Range 5 East. The subject properties are at an elevation of approximately 190 to 205 feet above sea level with a southerly slope (King County iMap 2020).

Soils in the area are mapped as Everett very gravelly sandy loam (NRCS 2020). These are described as somewhat excessively drained soils formed from glacial outwash deposits.

The surface geology of the subject properties is mapped as Quaternary Vashon recessional outwash (Qvr) deposits (Troost et al. 2006). The Qvr deposits are described as coarse to fine-grained sand and gravel deposits. The Qvr deposits were initially laid by outwash floodwaters during the northward recession of the Puget Lobe during the Vashon Stage of the Fraser Glaciation. Quaternary Vashon lacustrine silt (Qvrl) deposits are a finer grained subset of recessional outwash deposits, primarily composed of silty sands or silts related to outwash lake deposits during the recession of the Puget Lobe. No Qvrl deposits are mapped in the area, but the unit is overall related to the Qvr deposits. Qvr deposits are typically underlain by Quaternary Vashon till (Qvt) deposits. Qvt deposits primarily consist of compacted sand and gravel within a silt or clay matrix. Their compacted nature makes the Qvt deposits a regional low-permeability confining layer, often creating a shallow perched aquifer within the Qvr deposits.

The previous Phase II ESA of the subject properties (discussed in Section 2.0, below) encountered the shallow perched aquifer at approximately 5 to 15 feet bgs, with shallow soils being primarily composed of sand, silty sand, and silt typical of Qvr or Qvrl deposits.

The gradient below the subject properties is interpreted to be primarily to the south-southeast, following the trajectory of Goff Creek. Goff Creek is located on the eastern boundary of the subject property and flows to the south-southeast. However, there may also be a south-southwest gradient towards the West Tributary particularly on the western portion of the subject property. The West Tributary is located 1,100 feet west of the subject properties.

2. PREVIOUS INVESTIGATIONS

Historical investigations were summarized in the Parametrix (2017) Environmental Evaluation of the subject properties. Parametrix then completed a Phase II ESA in 2018. Sound Transit completed remediation at the subject properties in 2019. Copies of these reports are attached in Appendix C. The following summarizes the previous work completed at the subject properties.

2.1 1996 Restrictive Covenant

In 1994 and 1995, subsurface investigations were performed on the subject properties related to historical underground storage tanks (USTs) on the southeastern parcel (EL 299). Petroleum hydrocarbon-contaminated soils were discovered at both the northern and southern UST areas on EL299. Approximately 75 tons of petroleum contaminated soils (PCS) were excavated and removed from the northern UST area. The southern UST area was primarily underneath the building. Monitoring wells and boreholes were completed to determine the extent of contamination. Groundwater within the source area was initially found above the MTCA Method A cleanup levels (CULs) for gasoline, diesel, and xylenes. Approximately 40 tons of PCS was excavated and removed from south of the building with soil contamination remaining below the building. In 1996, a Restrictive Covenant was recorded on the subject properties, and Ecology issued a NFA determination for the cleanup.

2.2 2015 Phase I ESAs

In 2015, Shannon and Wilson, Inc. completed three separate Phase I ESAs for the subject parcels related to potential acquisition of the subject properties by Sound Transit. The Phase I ESAs were provided to Parametrix for the 2017 Environmental Evaluation.

2.3 2017 Environmental Evaluation

An environmental evaluation (document review) was conducted on the subject properties by Parametrix in July 2017 (Parametrix 2017). This information revealed:

- Potential soil impacts to the subject properties were relatively minimal, except for the southeastern parcel (2825059191/El 299), which had an estimated 430 cubic yards of petroleum-impacted soil near the southern portion of the former building related to a documented historical release.
- Groundwater below the subject property had been impacted by on-site or off-site issues, specifically on the southeast portion of the subject properties on parcel 2825059191(El 299), with potential minor impacts to the southwest portion of the subject properties on parcel 2825059159 (El 296).
- There were relatively little data to support that all impacts to the subject properties had been identified and/or sufficiently addressed (or planned to be addressed). The report noted that the potential for significant impacts to the subject properties beyond the southeastern portion was relatively low and recommended a Phase II ESA be completed to determine soil and groundwater conditions below the subject properties.

2.4 2018 Phase II ESA

On August 14, 15, and 16, 2017, a total of 20 environmental boreholes (B-1 through B-20) were drilled to evaluate soil and groundwater conditions below the subject properties.

Multiple soil samples were collected from each of the 20 boreholes, and groundwater samples were collected from eight of the boreholes. Drilling encountered primarily sand, silty sand, and silt in each of the boreholes with groundwater depths ranging from 5 to 15 feet bgs. Soil and groundwater samples were primarily analyzed for petroleum hydrocarbons, with some samples submitted for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), carcinogenic polycyclic aromatic hydrocarbons (cPAHs), and metals.

Total petroleum hydrocarbons (TPH) were detected in soil from six of the 32 samples submitted for analysis. Gasoline-range TPH was detected in three samples from Borehole B-15 on the southeastern portion of the subject property, ranging from 6 to 21 mg/kg below the MTCA Method A CUL and at the MTCA Method A CUL of 100 mg/kg (no benzene present) in Borehole B-17. Diesel-range TPH was detected in soil samples from Borehole B-15 ranging from 1,100 mg/kg below the MTCA Method A CUL to 2,500 mg/kg above the MTCA CUL. Similarly, oil-range TPH was detected in soil samples from B-15 ranging from 1,000 mg/kg below the MTCA CUL to 4,800 mg/kg above the MTCA CUL. Low levels of oil-range TPH were detected at Boreholes B-1 and B-19 at 50 mg/kg and 71 mg/kg, respectively, below the MTCA Method A cleanup level. Low levels of SVOCs and cPAHs were detected in the soil samples from B-15 but at levels below the respective MTCA Method A and Method B CULs.

Low concentrations of metals were detected in nearly all soil samples for mercury, arsenic, chromium, and lead at concentrations below the MTCA CULs. No cadmium was detected in any of the samples.

Total petroleum hydrocarbons were detected in groundwater from four of the eight samples submitted for analysis. Oil-range TPH was found in groundwater from B-1 at 260 µg/L and B-18 at 270 µg/L below the MTCA Method A CUL of 500 µg/L. Groundwater at two locations, B-11 on the southwest portion of the subject properties and B-15 on the southeast portion of the subject properties, had concentrations above the MTCA Method A CULs for diesel- and oil-range TPH. B-11 was reported to have diesel-range TPH at 510 µg/L and oil-range TPH at 520 µg/L. B-15 was reported to have diesel-range TPH at 2,600 µg/L and oil-range TPH at 4,500 µg/L. Low concentrations of gasoline at 75 µg/L were also present in the groundwater from B-15.

Groundwater samples were also submitted for VOCs and metals. Two of the groundwater samples (B-15 and B-18) had concentrations above MTCA Method A CULs for arsenic at 41 µg/L and 52 µg/L respectively. However, these concentrations were likely related to turbidity in the samples rather than leaching from an on-site source.

Based on the results of the Phase II ESA, Parametrix recommended excavations to remove source areas of soil contamination discovered at the subject properties and to develop mitigation and monitoring efforts to facilitate redevelopment.

2.5 2019 Sound Transit Excavation

In 2018, Ecology was notified of Sound Transit's plan to excavate contaminated soil from the subject properties in accordance with notification requirements of the Restrictive Covenant.

In 2019, KLB Construction excavated contaminated soil below the subject properties. Innovex Environmental Management Inc. (Innovex) completed characterization and soil confirmation sampling during the excavation.

Four areas of the subject properties (Figure 2) were excavated at depths ranging from 8 to 18 feet bgs. A total of 34 confirmation soil samples were collected for laboratory analysis from the four excavations, including sidewall and pit bottom samples. A total of approximately 223 tons of PCS was excavated and disposed off-site. Soil confirmation samples from the four areas showed low-level detections of diesel- and oil-range TPH at concentrations below the MTCA Method A CULs. There were no detections of gasoline in the confirmation samples remaining at the subject properties. No groundwater was reportedly encountered or investigated (Innovex 2019).

3. CURRENT INVESTIGATION

As noted in Section 1.0, the goal of the current Phase II ESA was to both evaluate conditions from Sound Transit's use of the property from the previous Phase II ESA through the present as well as to understand the current conditions below the subject property related to the historical release and cleanup completed by Sound Transit.

3.1 Field Investigation

On November 24, 2020, Paramatrix observed the drilling of eight boreholes across the property (B21 through B28). The locations of the boreholes are presented on Figure 2. The boreholes were spaced to allow three locations on each of the southern parcels (B21, B22, and B23 on EL 296; B24, B25, and B26 on EL 299), and two locations on the northern parcel (B27 and B28 on EL 297).

A one-call utility locate was completed, and Applied Professional Services (APS) was retained to locate conductible utilities below the subject property. The locations of the planned boreholes were slightly adjusted to allow Sound Transit to continue to operate on the property and to prevent striking newly placed utilities. Holt Services Inc. was retained as the licensed driller.

The boreholes were drilled to depths ranging from 10 to 15 feet bgs to evaluate soil and groundwater conditions below the property. Borehole logs and photographs of the drilling and soil cores from each of the boreholes are attached in Appendix A.

Sample cores were retained in 5-foot intervals using a direct-push hollow core sampler with new liners. The samplers were cleaned between borehole locations using a detergent/water mixture and water rinse.

The recovered soil cores were logged into a field book for lithology, color, and water content. The soil cores were field screened with a calibrated photoionization detector (PID) that was rented from Geotech Environmental Equipment Inc. Soil samples were collected from areas of PID field-screening detections or just above the groundwater interface. Four 40 milliliter (mL) volatile organic analysis (VOA) containers were filled with approximately 5-gram soil samples using the U.S. Environmental Protection Agency (EPA) 5035 method (purge and trap), and one 4-ounce glass jar with a Teflon lid liner was filled for each soil sample.

Soils encountered were typical of shallow sand and gravel fill above native outwash sand and lacustrine outwash deposits. The fill depth ranged from 1 to 7 ft bgs across the subject properties prior to encountering sand, silty sand, and silt layers.

Groundwater was encountered in each of the boreholes at depths ranging from 5.5 to 12 feet bgs. Following completion of the drilling, a temporary 1-inch diameter PVC screen and riser was installed in the boreholes using new materials and groundwater was extracted with a peristaltic pump and polyethylene and silicone tubing. Three 40 mL VOA containers and two 500 mL glass amber containers were filled at each borehole. Duplicate VOAs (B90-W) were collected from location B24. Duplicate amber containers were collected from location B25 (B91-W).

Samples were placed in a cooler with ice and kept at temperatures below 4 degrees Celsius until delivery to the laboratory.

A summary of the boreholes, samples collected, and observations is presented in Table below:

Table 1. Drilling Observations Summary

Location (BOREHOLE NUMBER)	Samples Collected	DEPTH TO WATER (Ft bgs)	Total Drilling Depth (Ft bgs)	Observations
B21	Soil (B21-11) Water (B21-W)	Approx. 12	15	Seven feet of fill above native outwash. PID detections 14.5 to 29.8 ppm at 11 ft
B22	Soil (B22-6) Water (B22-W)	Approx. 6	10	One and a half feet of fill above native outwash. no PID detections
B23	Soil (B23-9) Water (B23-W)	Approx. 10	15	One foot of fill above native outwash and lacustrine silt layers. No PID detections
B24	Soil (B24-2) Water (B24-W)	Approx. 8	15	Three feet of fill above native outwash. PID detections 2.0 to 2.7 ppm in fill, 0.2 ppm at five feet
B25	Soil (B25-4) Water (B25-W & B90-W)	Approx. 8	10	One foot of fill/asphalt above native outwash. PID detections 1.7 to 6.5 ppm from one to five feet
B26	Soil (B26-7) Water (B26-W & B91-W)	Approx. 7	15	Two feet of fill above native outwash and lacustrine silt layers. PID detections 0.2 ppm from five to seven feet
B27	Soil (B27-5.5) Water (B27-W)	Approx. 5.5	10	Three feet of fill above native outwash and lacustrine silt layers. no PID detections
B28	Soil (B28-9) Water (B28-W)	Approx. 9.5	15	Two feet of fill above native outwash. no PID detections

As noted in the summary and attached borehole logs, Parametrix measured low levels of VOCs using the PID in both fill and native deposits.

Fill placed by Sound Transit was largely absent of detectable VOCs using the field screening. However, at one location, B24 in the central southeast portion of the subject properties, VOCs were detected in the fill ranging from 2.0 to 2.7 parts per million (ppm). Many small spills of oils or fuels were observed across the construction site. The field-screening measurements of the fill appear to be consistent with these types of small releases during equipment mobilization across the property by Sound Transit.

Additionally, Parametrix measured low-level VOCs with the PID within the native deposits consistent with historical releases. Concentrations ranging from 14.5 to 29.8 ppm were measured at B21 just above the water table. Concentrations ranging from 1.7 to 6.5 ppm in native deposits from 1 to 5 feet bgs (directly below Sound Transit-placed fill) were measured at location B25. Concentrations up to 0.2 ppm from 5 to 7 feet bgs within native outwash deposits were measured at B26.

No VOCs were measured in soil cores recovered from B22, B23, B27, or B28.

The samples were delivered on the same day of collection to OnSite Environmental Inc. (OnSite) for rush analysis of gasoline-, diesel-, and oil-range TPH and BTEX. A total of eight soil samples, ten water samples (eight boreholes and two duplicates), and one trip blank was delivered to Onsite for analysis.

3.2 Laboratory Analytical Results

Onsite completed rush analysis of the soil and groundwater samples on November 24 and 25, 2020, using Ecology methods NWTPH-Gx, NWTPH-Dx/Dx Extended, and EPA Method 8021b (Ecology 2016). Laboratory reports are presented in Appendix B.

3.2.1 Analytical Methods

Ecology Method NWTPH-Gx is the qualitative and quantitative method for volatiles, primarily gasoline, petroleum products in soil and water. The method is primarily used for analysis of automotive gasolines, mineral spirits, Stoddard solvent and naphtha.

Ecology Method NWTPH-Dx/Dx Extended is the qualitative and quantitative method for semi-volatile—primarily diesel and oil—petroleum products in soil and water. This method is primarily used for analysis of diesel- and oil-range TPH, jet fuels, kerosene, hydraulic fluids, lubricating oils, and other fuel oils.

EPA Method 8021b is the qualitative and quantitative method for analysis of VOCs in soil and water in concurrence with the Ecology NWTPH-Gx method. The main VOCs analyzed by this method include BTEX.

3.2.2 Soil Results

Table 2 summarizes the results of the soil analyses. Figure 3 and Table 2 shows the soil results map. The eight soil samples were analyzed for gasoline-, diesel-, and oil-range TPH and BTEX. No gasoline- or diesel-range TPH or BTEX were detected in any of the samples. Oil-range TPH was detected in three samples: 57mg/kg at B22 from a depth of 6 feet; 660 mg/kg at B24 from a depth of 2 feet; and 100 mg/kg at B27 from a depth of 5.5 feet. These are all below the applicable MTCA Method A CUL for oil-range TPH in soil of 2,000 mg/kg (Ecology 2013).

3.2.3 Groundwater Results

Table 3 summarizes the results of the groundwater analyses. Figure 4 and Table 3 shows the groundwater results map. The eight water samples and two duplicates were analyzed for gasoline-, diesel-, and oil-range TPH and BTEX, one duplicate was analyzed for Gas-BTEX, and the other duplicate was analyzed for diesel- and oil-range TPH. The trip blank was analyzed for Gas-BTEX (not summarized in the table).

There were no detections of gasoline- and diesel-range TPH or BTEX in any of the samples. Oil-range TPH was detected in five samples: 400 µg/L to 440 µg/L at B25 and its duplicate (B91); 250 µg/L at B26; 410 µg/L at B27; and 230 µg/L at B28. These results are all below applicable the MTCA Method A CUL for oil-range TPH in groundwater of 500 µg/L (Ecology 2013).

3.3 Discussion

The results from eight soil samples and ten groundwater samples collected from eight boreholes across the three subject properties were reported below MTCA Method A CULs for gasoline-, diesel-, and oil-range TPH and BTEX. No gasoline, diesel, or BTEX were detected above laboratory detection limits (Tables 2 and 3 above) (Ecology 2013).

Oil-range TPH was detected in three soil samples and four water samples (plus one duplicate) but below applicable MTCA Method A CULs (Ecology 2013). The results are consistent with the oil-range TPH from multiple sources, including small spills related to Sound Transit use of the property as well as historical releases to the subject property.

3.3.1 Sound Transit Use

Small spills of oil related to Sound Transit equipment were observed throughout the property during the Phase II ESA, appearing as small rainbow sheens on the ground. These are generally *de minimis* conditions affecting the subject properties. The B24-2 soil sample was collected from fill placed onto the subject property by Sound Transit and was found to contain up to 660 mg/kg of oil-range TPH below the MTCA Method A CUL of 2,000 mg/kg. The results generally confirm the small spills related to Sound Transit use to be *de minimis*. However, care should be given when the subject properties are redeveloped to pay attention to potential petroleum hydrocarbons in shallow fill soils. Due to the limited nature of this Phase II ESA, there may be areas in the fill above MTCA Method A CULs.

The groundwater results do not appear to show groundwater impacts related to Sound Transit's use. We observed a street sweeping and water pit on the north side of EL 296. Two boreholes were placed near the pit, B27 to the north, and B22 to the south. At B27, upgradient, oil-range TPH was found at 410 µg/L. At B22, downgradient, oil-range TPH was found below detection levels. This suggests the street sweeping pit was not the source of the oil-range TPH in groundwater.

A vehicle wheel wash pit was observed on the eastern portion of the subject property on EL 299. B25 was placed southeast of the wheel wash pit, and B26 was placed south and downgradient of the wheel wash pit. Soil samples from both locations were non-detect for petroleum hydrocarbons. Groundwater results showed 400 to 440 µg/L of oil-range TPH at B25 and 250 µg/L of oil-range TPH at B26. These results are below the MTCA Method A CUL. As discussed below, the groundwater samples from these locations appear to largely reflect residual impacts related to historical releases prior to Sound Transit's use.

3.3.2 Historical Releases

In 2019, Sound Transit completed excavation of soil in the areas of historical releases (Figure 2). Boreholes placed in the vicinity of these historical releases (B21, B23, B24, B25, B26, and B28) found no soil contamination related to historical releases. Groundwater results were found below MTCA Method A CULs, ranging from below detection levels up to 440 µg/L for oil-range TPH. These results appear to generally show that the excavation of the historical releases completed by Sound Transit was effective.

Due to the limited nature of the Phase II ESA and inability to drill in exact locations of the historical releases, care should be given when the subject properties are redeveloped to evaluate potential for encountering petroleum impacted groundwater. This investigation found concentrations below MTCA Method A CULs, suggesting areas of petroleum impacted groundwater, if any, appear to be minimal and isolated.

4. CONCLUSIONS

Parametrix conducted a Phase II ESA at three properties (EL296, EL297, and EL299) in the 130th Avenue NE area of Bellevue, Washington. Based on the findings of this investigation, Parametrix reached the following conclusions:

1. Parametrix previously completed an environmental review and Phase II ESA of the subject property and identified areas of soil and groundwater contamination.
2. Sound Transit utilized the subject properties from 2018 to 2020 for construction of the Bel-Red/130th Avenue station. Sound Transit completed an excavation of the historical release areas in 2019. However, no post-excavation groundwater analysis was performed.
3. Parametrix completed eight boreholes across the property and sampled soil and groundwater for the purpose of analyzing of Sound Transit's use of the property and confirming the current conditions of the subject properties related to the historical releases.
4. All soil and water samples were found non-detect for target gasoline-range TPH, diesel-range TPH, and BTEX. Oil-range TPH was found below the MTCA Method A CUL in three soil samples and four groundwater samples.
5. These results appear to show *de minimis* impacts to the property related to Sound Transit's use and appear to confirm that areas of historical releases have been properly remediated.
6. Due to the limited nature of the Phase II ESA, there may be isolated impacts to soil and groundwater below the property that could be encountered during redevelopment. However, concentrations are anticipated to be below applicable MTCA Method A CULs based on the results of this Phase II ESA.

5. RECOMMENDATIONS

Based on the conclusions of this investigation, Parametrix offers the following recommendations:

1. If the property is redeveloped, it is recommended that a contaminated media management plan (CMMP) be prepared for the subject properties to guide excavation and construction activities and describe potential contaminants, notification procedures, safety precautions, handling, storage, and sampling of the contaminated materials. In addition, since the depth of groundwater is less than 10 feet bgs, there is potential that contaminated groundwater may be encountered during excavation or trenching activities for subsurface structures. Therefore, the CMMP should be prepared to include handling, management, and disposal of groundwater during construction activities.
2. A restrictive covenant remains for the property, related to the historical soil contamination. The contamination was reported to Ecology to have been removed by Sound Transit. It may be prudent to enter the subject properties into the Ecology Voluntary Cleanup Program or Pollution Liability Insurance Agency (PLIA) Petroleum Technical Assistance Program (PTAP) to determine steps for delisting of the subject properties and removal of the restrictive covenant. Completion of permanent monitoring wells and quarterly groundwater monitoring would likely be required to remove covenants and obtain NFA determinations from either agency with no land use restrictions.

Seattle, WA 98104

Re: Analytical Data for Project 553-1580-081
Laboratory Reference No. 2011-243

Dear Mike:

Enclosed are the analytical results and associated quality control data for samples submitted on November 24, 2020.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 25, 2020
Samples Submitted: November 24, 2020
Laboratory Reference: 2011-243
Project: 553-1580-081

Case Narrative

Samples were collected on November 24, 2020 and received by the laboratory on November 24, 2020. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
 - B - The analyte indicated was also found in the blank sample.
 - C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
 - E - The value reported exceeds the quantitation range and is an estimate.
 - F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
 - H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
 - I - Compound recovery is outside of the control limits.
 - J - The value reported was below the practical quantitation limit. The value is an estimate.
 - K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
 - L - The RPD is outside of the control limits.
 - M - Hydrocarbons in the gasoline range are impacting the diesel range result.
 - M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
 - N - Hydrocarbons in the lube oil range are impacting the diesel range result.
 - N1 - Hydrocarbons in diesel range are impacting lube oil range results.
 - O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
 - P - The RPD of the detected concentrations between the two columns is greater than 40.
 - Q - Surrogate recovery is outside of the control limits.
 - S - Surrogate recovery data is not available due to the necessary dilution of the sample.
 - T - The sample chromatogram is not similar to a typical _____.
 - U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
 - U1 - The practical quantitation limit is elevated due to interferences present in the sample.
 - V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
 - W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
 - X - Sample extract treated with a mercury cleanup procedure.
 - X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
 - Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
 - Z -
- ND - Not Detected at PQL
 PQL - Practical Quantitation Limit
 RPD - Relative Percent Difference

Re: Analytical Data for Project 553-1580-081
Laboratory Reference No. 2011-254

Dear Mike:

Enclosed are the analytical results and associated quality control data for samples submitted on November 24, 2020.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: November 25, 2020
Samples Submitted: November 24, 2020
Laboratory Reference: 2011-254
Project: 553-1580-081

Case Narrative

Samples were collected on November 24, 2020 and received by the laboratory on November 24, 2020. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
 - B - The analyte indicated was also found in the blank sample.
 - C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
 - E - The value reported exceeds the quantitation range and is an estimate.
 - F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
 - H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
 - I - Compound recovery is outside of the control limits.
 - J - The value reported was below the practical quantitation limit. The value is an estimate.
 - K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
 - L - The RPD is outside of the control limits.
 - M - Hydrocarbons in the gasoline range are impacting the diesel range result.
 - M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
 - N - Hydrocarbons in the lube oil range are impacting the diesel range result.
 - N1 - Hydrocarbons in diesel range are impacting lube oil range results.
 - O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
 - P - The RPD of the detected concentrations between the two columns is greater than 40.
 - Q - Surrogate recovery is outside of the control limits.
 - S - Surrogate recovery data is not available due to the necessary dilution of the sample.
 - T - The sample chromatogram is not similar to a typical _____.
 - U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
 - U1 - The practical quantitation limit is elevated due to interferences present in the sample.
 - V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
 - W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
 - X - Sample extract treated with a mercury cleanup procedure.
 - X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
 - Y - The calibration verification for this analyte exceeded the 20% drift specified in methods 8260 & 8270, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
 - Z -
- ND - Not Detected at PQL
 PQL - Practical Quantitation Limit
 RPD - Relative Percent Difference

SUBJECT: Environmental Analysis of 130th Properties
East Link Extension Project

CC: Steve Olling, Parametrix
Monica Buck, City of Bellevue
Janet Lewine, City of Bellevue

PROJECT NUMBER: 557-1580-XXX

PROJECT NAME: City of Bellevue
WO#1 - 130th Environmental Due Diligence

On behalf of the City of Bellevue, Parametrix conducted an environmental analysis related to several Sound Transit-owned properties (known as right-of-way [ROW] Properties #EL 296, EL 297, and EL 299) associated with the Sound Transit East Link Extension project (Figure 1). It is our understanding that the properties were acquired by Sound Transit as part of the lightrail project for construction of the 130th Station, as well as for use as construction staging. Potentially, the properties will be transferred to or otherwise acquired by the City of Bellevue once construction is complete. The City of Bellevue is exploring the potential for transit-oriented development (TOD) on the properties. As such, this environmental analysis was conducted as part of the City of Bellevue's due diligence and included review of previous environmental documents and other information.

As part of the environmental analysis, Parametrix reviewed the following available documents:

- *Phase I Environmental Site Assessment, ROW #EL 296, Elufa, 1606 130th Avenue NE, Bellevue, WA. Prepared by Shannon & Wilson. February 25, 2015.*
- *Phase II Environmental Site Assessment, ROW #EL 296, Elufa, 1606 130th Avenue NE, Bellevue, WA. Prepared by Shannon & Wilson. October 9, 2015.*
- *Limited Hazardous Materials Survey Report, ROW #EL 296, Elufa, 1606 130th Avenue NE, Bellevue, WA. Prepared by Shannon & Wilson. March 5, 2015.*
- *Phase I Environmental Site Assessment, ROW #EL 297, Aiphone Corporation, 1700 130th Avenue NE, Bellevue, WA. Prepared by Shannon & Wilson. June 30, 2015.*
- *Limited Hazardous Materials Survey Report, ROW #EL 297, Aiphone Corporation, 1700 130th Avenue NE, Bellevue, WA. Prepared by Shannon & Wilson. February 11, 2015*

- *Phase I Environmental Site Assessment, ROW #EL 299, Arnold's Appliances/Longview Publishing, 1625 132nd Avenue NE, Bellevue, WA. Prepared by Shannon & Wilson. April 27, 2015.*
- *Limited Hazardous Materials Survey Report, ROW #EL 299, Arnold's Appliances, 1625 132nd Avenue NE, Bellevue, WA. Prepared by Shannon & Wilson. February 12, 2015.*
- *Title Reports and other supporting documentation provided by Sound Transit for properties EL 296, EL 297, and EL 299.*
- *East Link Extension, Hazardous Materials Plan, Drawing No: L87-CXP031*

BACKGROUND

It is our understanding that Sound Transit has acquired the properties (EL 296, EL 297, and EL 299) as part of construction of the East Link Extension project, primarily to construct the 130th Station, as well as for use as construction staging. The location of the properties are included on Figure 1. Sound Transit is considering transfer of the properties to the City of Bellevue once the project is complete. The City of Bellevue is exploring the potential for transit-oriented development on the properties. Preliminary plans suggest mixed-use development including retail, apartments/condominiums, and parking facilities (with potential for underground parking). The City of Bellevue is conducting due diligence prior to negotiations for transferring the properties from Sound Transit and to assist with TOD alternatives. A review of the previous environmental documents was conducted and is summarized in the following section.

ENVIRONMENTAL ISSUE SUMMARY

Property #EL 296 – 1606 130th Avenue NE, Bellevue, WA

This property is approximately 1.18 acres in size and includes a 23,000 square foot building. At the time of the site walk (June 2017) the building was vacant, but appeared to be slated for demolition (estimated by July 2017). Based on historical information, the building was constructed in 1962 and has been primarily used for commercial businesses. A Phase I ESA, Phase II ESA, and Hazardous Materials Building Survey (HMBS) were conducted on the property in 2015, prior to Sound Transit acquisition, and revealed the following information:

Phase I ESA Conclusions

- During the Phase I ESA site walk, a tenant (Wall Doctor) had several waste drums stored on-site (primarily solvents such as toluene, acetone, and mineral spirits) and evidence of spills and floor staining were noted, suggesting potential improper handling and/or disposal of hazardous materials. This was identified as having potential to have impacted the property.
- Potential for impacts from the property to the northeast (Journal American/Longview Publishing; EL 297.1), was identified. This was related to two gasoline underground storage tanks (USTs) that were decommissioned at the site in 1995, along with excavation and off-site disposal of 75 tons of petroleum impacted soil. The subject property is directly downgradient from the Journal American site.
- The property to the west of the site, the Cadman Premix concrete batch plant, was identified as having several USTs with reported releases. Approximately 323 tons of contaminated soil was removed during decommissioning in 1998. The Phase I ESA indicated low potential for this site to impact the subject property.
- A site immediately to the south (Kelly's Autobody) includes USTs, but no reported releases.

Phase II ESA Conclusions

In 2015, a Phase II ESA was conducted on the subject property and included 4 borings for the collection of soil and groundwater samples, generally in all four corners around the building.

- Gasoline, lube oil, diesel, volatile organic compounds (VOCs) and metals were detected in soil at the site, but were below the Washington State Model Toxic Control Act (MTCA) cleanup levels.
- Petroleum hydrocarbons were not detected in any of the groundwater samples. Low levels of VOCs were detected, but appeared to be below the applicable MTCA cleanup levels. Low levels of metals were also detected, some slightly above MTCA cleanup levels. However, there is potential that these samples were elevated due to turbidity or naturally occurring conditions.

HMBS Conclusions

- The HMBS indicated that some hazardous materials were found in the building materials; these need to be properly abated and/or removed in accordance with local, State and Federal laws prior to or during demolition activities.

EL 296 Summary

Based on a review of the environmental documents, there appears to be some potential for on-site contamination associated with on-site or off-site facilities; however, the potential was thought to be generally low. Soil and/or groundwater samples collected on-site did identify low levels of contaminants; however, based on the results, were generally below regulatory cleanup levels and likely to be limited in extent and magnitude.

Property #EL 297 – 1700 130th Avenue NE, Bellevue, WA

This property is 1.23 acres in size and includes an approximately 18,000 square foot building. At the time of the site walk (June 2017) the building was primarily vacant, but appeared to be used for construction offices. The building was constructed in 1977 and generally used by Aiphone to develop and manufacture communication systems. A Phase I ESA and HMBS was conducted on the property in 2015 and revealed the following information:

Phase I ESA Conclusions

- The building has primarily been used by Aiphone to develop and manufacture communication systems. No significant use of hazardous materials were identified.
- Potential for impacts from the property to the east (Journal American/Longview Publishing; EL 297.1), was identified. This was related to two gasoline USTs that were decommissioned at the site in 1995, along with excavation and off-site disposal of 75 tons of petroleum impacted soil. A review of the site files suggest that no groundwater data could be located and may not have been conducted. Based on lack of groundwater samples and previous impacts to the property, this site was identified as having potential to impact the subject property.

HMBS Conclusions

- The HMBS indicated that some hazardous materials were found in the building materials; these need to be properly abated and/or removed in accordance with local, State and Federal laws.

EL 297 Summary

Based on a review of the environmental documents, there appears to be some potential for on-site contamination associated with on-site or off-site facilities; however, the potential was thought to be generally low. No on-site soil or groundwater data is available.

Property #EL 299 – 1625 132nd Avenue NE, Bellevue, WA

This property is 1.62 acres in size and includes a large building and surface parking. At the time of the site walk (June 2017) the building was undergoing demolition on the eastern portion. Reportedly, the building would be completely demolished by July 2017. The building had been used for various commercial businesses and appears to have one or more additions constructed. A Phase I ESA and HMBS was conducted on the property in 2015 and revealed the following information:

Phase I ESA Conclusions

- An oil storage room was identified in the original 4,850 square foot shop building in 1968 records.
- A larger building replaced the original shop in 1983, with a subsequent addition in 2005.
- Records indicated that the property included a former fuel dispenser and at least one UST; the exact date of UST decommissioning is unknown, but appears to have occurred during removal of the original shop building.
- Contaminated soil was identified in 1994 after the site had been redeveloped and a former press building constructed over part of the area of contamination. Remediation included the excavation and off-site disposal of approximately 40 tons of petroleum-impacted soil. It was estimated that approximately 430 cubic yards of contaminated soil was left in-place due to the proximity to the building foundation and underneath the building. The remaining contaminated soil was effectively capped by the existing building and placement of a new 4-inch asphalt parking lot.
- It appears that groundwater monitoring was conducted in 1994 through 1996. Petroleum hydrocarbons (diesel and gasoline) were detected below the MTCA cleanup levels at that time. Revisions of the MTCA cleanup levels in 2007 and 2013 suggest that earlier results would have slightly exceeded the revised cleanup level for diesel of 500 micrograms per liter.
- Ecology issued a conditional no further action (NFA) determination for the site, which included the acknowledgement of existing residual contamination being capped by hardscape to limit potential exposure. In 1996, a Restrictive Covenant (RC) was filed for the property associated with the residual contamination. Significant covenants in the RC include: 1) Ecology must be notified if any excavation is to be conducted and/or the existing hardscape (building, parking lot, etc.) is to be removed, 2) no water wells are allowed to be constructed on the property, and 3) residual contamination is capped by the asphalt parking lot and/or building and must be maintained to limit potential exposure. It is unknown if the conditions of the RC were followed during the current Sound Transit demolition project.
- Potential for impacts from the property to the north (Journal American/Longview Publishing; EL 297.1), was identified. This was related to two gasoline USTs that were decommissioned at the site in 1995, along with excavation and off-site disposal of 75 tons of petroleum impacted soil. A review of the site files suggest that no groundwater data could be located and may not have been conducted. Based on lack of groundwater samples and previous impacts to the property, this site was identified as having potential to impact the property.

HMBS Conclusions

- The HMBS indicated that some hazardous materials were found in the building materials; these need to be properly abated and/or removed in accordance with local, State and Federal laws.

EL 299 Summary

Documented contamination was identified on EL299, which includes approximately 430 cubic yard of petroleum-contaminated soil. Reportedly, an excavation is being conducted by Sound Transit, that allows up to 1,000 yards of soil for off-site disposal (based on East Link Extension drawing #: L87-CXP010). The schedule for this work is not known.

CONCLUSIONS/RECOMMENDATIONS

The following summarizes the results of the environmental analysis of the properties:

1. A review of the previous environmental documentation indicates that there is some potential for impacts to the three Sound Transit-owned properties. This is primarily based on past use of each of the properties and known impacts on adjacent sites. However, with the exception of Property EL 299, the potential for significant impacts appears to be relatively low. No soil or groundwater data exists for Property EL 297 to confirm current environmental conditions. Limited soil/groundwater data for Property EL 296 suggests low levels of contaminants may be present in the subsurface, but are primarily below current MTCA cleanup levels.
2. Existing contaminated soil was identified on Property EL 299, which includes an estimated 430 cubic yards of petroleum-impacted soil near the southern portion of the (former) building. Reportedly, an excavation is planned to be conducted by Sound Transit during the station development that allows up to 1,000 yards of contaminated soil for off-site disposal (based on East Link Extension Drawing No. L87-CXP031). The schedule for completion of the work is not known.
3. There is some evidence that groundwater has been or is currently impacted by on-site or off-site issues, specifically on Property EL 299 and to a lesser extent on Property EL 296. The potential for significant impacts and likelihood for cleanup activities to be required is low. However, given that groundwater is expected to be less than 10 feet below ground surface, potential construction activities such as dewatering or trenching should consider the potential for management and/or disposal requirements of excess water.
4. As noted above, the potential of significant adverse environmental conditions on or near the properties is relatively low (with the exception of EL 299). However, there is relatively little data to support that all impacts have been identified and/or sufficiently addressed (or planned to be addressed). In acceptance of the properties from Sound Transit, the City of Bellevue would likely accept some or all potential future environmental liability. As such, the City of Bellevue should consider establishing baseline environmental conditions prior to acquisition in the form of a limited Phase II ESA for all properties. This may also help with evaluation of TOD alternatives, and with establishing worker health & safety requirements, as well as potential management, handling and disposal of excavated material during future construction activities.

EXECUTIVE SUMMARY

On behalf of the City of Bellevue, Parametrix has prepared this Phase II Environmental Site Assessment (ESA) report for the related to three properties located at 130th Avenue NE in Bellevue, Washington (Figure 1). The properties are known as right-of-way (ROW) lots EL296, EL297, and EL299 (Figure 2). Based on the findings of this investigation, Parametrix reached the following conclusions:

1. A previous environmental review was conducted on the properties and identified several potential environmental issues, including: 1) the historical operation of commercial businesses on all three properties, 2) a known UST and associated soil contamination in the southern portion of property EL299, 3) a former UST on an adjacent property (EL 297.1), and 4) the potential to have been impacted by adjacent or nearby property releases.
2. A Phase II investigation was conducted at the site to evaluate subsurface conditions. In general, the 20 borings completed (labeled B-1 through B-20) were primarily utilized to investigate the general site conditions associated with historical use of the property and establish baseline environmental conditions. The work was completed as part of the City of Bellevue's due diligence in response to potentially acquiring the properties from Sound Transit. The City of Bellevue may potentially pursue transit-oriented development (TOD) on the properties.
3. Based on the sampling conducted on property EL297, it appears that limited soil and groundwater contamination exists on the property. Oil-range petroleum hydrocarbons were detected at a concentration of 50 mg/kg in boring B-1 at 11 feet bgs; however, it was significantly below the applicable MTCA cleanup level and does not constitute a concern. No other contaminants were detected in any of the soil samples on the property and no field evidence (visual, odor, or PID readings) of contamination were observed. Oil-range petroleum hydrocarbons (0.26 mg/L) were also detected in the groundwater sample collected from boring B-1, which is located in the northeast corner of the property. Constituent data suggests that the risk associated with groundwater contamination is low. No other groundwater contamination was detected on the property. Based on the presumed groundwater direction to the west-southwest, there is potential that the groundwater contamination may be from an off-site source. In any event, the contamination appears to be limited to petroleum hydrocarbons and is below Ecology's cleanup levels. Therefore, it is not expected that any cleanup actions would be required on the subject property. However, the low levels of groundwater contamination on the property does present some potential environmental liability and should be considered during acquisition and/or planning for future construction and/or excavation.
4. Based on the soil sampling conducted on property EL296, it appears that soil and groundwater contamination is limited. No field evidence (visual, odor, or PID readings) of contamination was observed in any of the borings and none of the soil samples analyzed showed any detections of contaminants at significant levels. As noted during the previous environmental review, there were some detections of several contaminants in soil samples from four borings completed in 2015, but were below MTCA cleanup levels. Diesel (0.51 mg/L) and oil (0.52) concentrations were detected in groundwater samples collected from boring B-11, which is located in the southwest corner of the property. The concentrations detected slightly exceed the Ecology cleanup levels of 0.5 mg/L. Based on the presumed groundwater direction to the west-southwest, there is potential that the

groundwater contamination may be from an on-site source or from the adjacent properties. As noted during the previous environmental review, petroleum hydrocarbons were not detected in groundwater at significant levels in four borings in 2015. Based on this information, it appears that contamination may be limited in extent and magnitude and significant remedial actions are not likely necessary. However, the low levels of groundwater contamination on the property does present some potential environmental liability and should be considered during acquisition and/or planning for future construction and/or excavation.

5. Based on the soil sampling conducted, it appears that soil contamination on property EL 299 is present, primarily in the area near boring B-15 in the northwest corner of the property. The elevated concentrations of diesel and oil-range petroleum hydrocarbons (maximum of 4,800 mg/kg) in samples collected from B-15 exceeds the MTCA Method A cleanup levels. Based on the lack of detections in surrounding borings (B-14, B-17, and B-20), it appears that contamination may be limited in both lateral and vertical extent. However, environmental liability from the existing contamination does exist and excavation and/or disturbance of any materials in that area will need to be properly handled, managed, and disposed. Based on the groundwater sampling, it appears that some contamination is associated with the area near boring B-15. Based on the presumed groundwater direction to the southwest, there is potential that the groundwater contamination may be from an off-site source; however, soil contamination detected in the boring suggests a local source. The concentrations of diesel-range petroleum hydrocarbons in groundwater significantly exceeds the MTCA Method A cleanup level; thus, the presence of groundwater contamination presents a moderate concern. The soil and groundwater contamination on the property presents an environmental liability and must be considered during acquisition and/or planning for future construction/excavation.
6. In relation to future TOD opportunities, the presence of soil and groundwater contamination on the properties does present some concern, but does not appear to be a significant barrier to development options and can be managed with appropriate measures. If significant excavation is required (i.e. subsurface parking structures or similar), it appears that the majority of soil at the site may potentially meet unrestricted use criteria; thus, significantly reducing potential costs. However, several areas of the site, particularly on property EL 299, appear to be impacted above MTCA cleanup levels and all soil in those areas will need to be managed appropriately to ensure health and safety of construction workers, as well as to ensure it is properly handled and disposed accordingly. Similarly, groundwater appears to be moderately impacted in several areas of the site and is known to be very shallow (<10 feet). If future construction involves subsurface structures, dewatering during excavation and trenching activities may potentially be required and proper handling, management, and disposal of groundwater will need to be conducted, potentially increasing construction costs significantly.

Based on the conclusions of this investigation, Parametrix offers the following recommendations:

1. The properties have been impacted by petroleum hydrocarbons and associated constituents in both soil and groundwater. Moderate soil impacts are primarily in the northeastern portion of property EL 299, with very low impacts in the remaining properties. Moderate groundwater impacts appear to coincide with soil impacts in the northeastern portion of property EL 299, with much less groundwater impacts in the northwestern portion of EL 297 and southwestern corner of EL 296. While soil and groundwater impacts do not appear to present a risk to current site use and occupants, it is recommended that potential cleanup alternatives and/or future liability costs be considered during any acquisition process and a change in site use, particularly for future workers or residents.
2. If the property is acquired and redeveloped, it is recommended that a contaminated media management plan (CMMP) be prepared for the site to guide excavation and construction activities, and describes potential contaminants, notification procedures, safety precautions, handling, storage and sampling of the contaminated materials. In addition, since the depth of groundwater is less than 10 feet bgs, there is potential that contaminated groundwater may be encountered during excavation or trenching activities for subsurface structures. Therefore, the CMMP should be prepared to include handling, management, and disposal of groundwater during construction activities.
3. Based on environmental review of past investigations and the results of the current investigation, it does not appear that the potential for TOD would be precluded by existing environmental conditions. Significant remedial actions may not be required, but existing contamination will need to be considered during any redevelopment and managed appropriately (per a CMMP). Reportedly, an excavation is planned to be conducted by Sound Transit during the station development that allows up to 1,000 yards of contaminated soil for off-site disposal (based on East Link Extension Drawing No. L87-CXP031). It is recommended that the City of Bellevue ensure that work is completed prior to any transfer of the property and appropriate documentation is provided. If feasible, it is recommended that contaminated soil in the northeast corner of EL 299 be removed prior to transfer of the property to minimize future environmental liability to the City. Additional investigation may be required to fully delineate the contamination; however, there is potential that the work could be completed as part of the construction activities and the planned contaminated soil excavation as noted above.
4. It is recommended that future environmental liability associated with the properties be considered by the City. It is recommended that any entity entering into an acquisition agreement with the site owner should consider legal protection against the discovery of previously unknown environmental conditions. This legal protection can be obtained in a number of alternatives, but is commonly completed through an Indemnification Clause in the Purchase and Sale Agreement or a Prospective Purchasers Agreement program.

1. INTRODUCTION

On behalf of the City of Bellevue, Parametrix has prepared this Phase II Environmental Site Assessment (ESA) report related to three properties located at 130th Avenue NE in Bellevue, Washington (Figure 1). The properties are known as right-of-way (ROW) lots EL296, EL297, and EL299 (Figure 2). The investigation activities were conducted to support the potential acquisition of the properties by the City of Bellevue from Sound Transit.

The properties were acquired by Sound Transit for the East Link Lightrail Extension project, primarily for construction of the 130th Station, as well as for use as construction staging. Sound Transit is considering transfer of the properties to the City of Bellevue once the project is complete. The City of Bellevue is exploring the potential for transit-oriented development (TOD) on the properties. Preliminary plans suggest mixed-use development including retail, apartments/condominiums, and parking facilities (with potential for underground parking).

The City of Bellevue is conducting due diligence prior to negotiations for transferring the properties from Sound Transit and to assist with TOD alternatives. In July 2017, Parametrix completed an environmental analysis of the properties, which primarily included review and evaluation of previous environmental documents and supporting information (Parametrix 2017a).

This Phase II ESA was conducted in accordance with the scope of work provided to the City. All field activities were performed in accordance with the site Health and Safety Plan (HASP) dated August 2017 (Parametrix 2017b). The purpose of the Phase II ESA was to evaluate current environmental conditions at the subject properties and determine if the past use of the properties had impacted subsurface conditions. Specific tasks included the collection of soil and groundwater samples from 20 investigative borings on the three properties. Conclusions and recommendations within this report are based on observed evidence and data collected during the performance of this assessment, as well as information obtained through previous investigations or documentation, where available.

1.1 Site Location

The subject properties are located between 130th Avenue NE and 132nd Avenue NE in Bellevue, Washington (Figure 1). The subject property includes ROW lots EL296 (1606 130th Avenue NE), EL297 (1700 130th Avenue NE), and EL299 (1625 132nd Avenue NE). The boundaries of the parcels are shown on Figure 2.

1.2 Site and Vicinity Characteristics

The following includes site characteristics for each of the three subject properties.

1.2.1 Property EL296

This property is approximately 1.18 acres in size and previously included a 23,000 square foot building. The building was demolished in July 2017; currently the property is vacant and consists of bare ground that has been graded. Based on historical information, the building was constructed in 1962 and was primarily used for commercial businesses.

1.2.2 Property EL297

This property is 1.23 acres in size and includes an approximately 18,000 square foot building. The building was constructed in 1977 and generally used by Aiphone to develop and manufacture communication systems. Currently, the building is mostly vacant, but appears to be used for construction offices by Sound Transit and/or its contractors.

1.2.3 Property EL299

This property is 1.62 acres in size and previously included a large building and surface parking. The building was demolished in July 2017; currently the property is vacant and consists of bare ground that has been graded. The building had been used for various commercial businesses and appeared to have one or more additions constructed.

1.3 Physical Setting

The subject properties are located within the Puget Sound Basin, a broad, low-lying region between the Cascade Range to the east and the Olympic Mountains to the west. The existing topography and regional geology have been largely shaped by glacial activity. The region is mostly underlain by Vashon till, a light-gray virtually unsorted, unstratified compact mixture of boulders, cobbles, sand, silt, and clay that can be up to 150 feet thick.

The regional geology consists of a sequence of glacially consolidated soils overlying bedrock. The underlying soils were consolidated under the weight of glaciers and became generally very hard and/or compact. Surface soils in the subject property area generally consist of a mixture of sands, silts, and gravels of varying thicknesses and occurrences.

Topography at the site slopes to the southwest. Based on soil boring and well logs reviewed for the subject property area, as well as those completed for the current investigation, shallow soil consists mostly of sand, intermixed with gravels and silts.

Groundwater levels in this area range from about 5 to 15 feet bgs. Groundwater flow in this portion of the Puget Lowland has been characterized by a gradient to the west. During the current investigation, groundwater was encountered between approximately 8 and 10 feet bgs.

2. PREVIOUS INVESTIGATIONS

An environmental evaluation (document review) was conducted on the subject properties by Parametrix in July 2017 (Parametrix 2017a). Relevant conclusions of the evaluation are included below:

1. A review of the previous environmental documentation indicates that there is some potential for impacts to the three Sound Transit-owned properties. This is primarily based on past use of each of the properties and known impacts on adjacent sites. However, with the exception of property EL 299, the potential for significant impacts appears to be relatively low. No soil or groundwater data exists for property EL 297 to confirm current environmental conditions. Limited soil/groundwater data for property EL 296 suggests low levels of contaminants may be present in the subsurface, but are primarily below current MTCA cleanup levels.
2. Existing contaminated soil was identified on property EL 299, which includes an estimated 430 cubic yards of petroleum-impacted soil near the southern portion of the (former) building. Reportedly, an excavation is planned to be conducted by Sound Transit during the station development that allows up to 1,000 yards of contaminated soil for off-site disposal (based on East Link Extension Drawing No. L87-CXP031). The schedule for completion of the work is not known.
3. There is some evidence that groundwater has been or is currently impacted by on-site or off-site issues, specifically on property EL 299 and to a lesser extent on property EL 296. The potential for significant impacts and likelihood for cleanup activities to be required is low. However, given that groundwater is expected to be less than 10 feet below ground surface, potential construction activities such as dewatering or trenching should consider the potential for management and/or disposal requirements of excess water.
4. As noted above, the potential of significant adverse environmental conditions on or near the properties is relatively low (with the exception of EL 299). However, there is relatively little data to support that all impacts have been identified and/or sufficiently addressed (or planned to be addressed). In acceptance of the properties from Sound Transit, the City of Bellevue would likely accept some or all potential future environmental liability. As such, the City of Bellevue should consider establishing baseline environmental conditions prior to acquisition in the form of a limited Phase II ESA for all properties. This may also help with evaluation of TOD alternatives, and with establishing worker health & safety requirements, as well as potential management, handling and disposal of excavated material during future construction activities.

The Phase II ESA was conducted based on issues identified during the environmental analysis and to evaluate the subject properties for possible subsurface contamination. The focus of the Phase II ESA was on establishing baseline environmental conditions.

3. SUBSURFACE INVESTIGATION

On August 14, 15, and 16, 2017, Parametrix supervised the drilling of investigative borings on the subject properties. The borings (labeled B-1 through B-20) were primarily utilized to establish baseline environmental conditions. However, specific areas of investigation included a former UST and known contamination on the south-central portion of property EL299, as well as borings placed on the north side of property EL299 where a former UST had been identified on the adjacent property to the north (EL297.1). The location of the borings are shown on Figure 2. The following sections describe the soil and groundwater sampling methods and analytical results.

3.1 Investigative Methods

The following sections describe the sampling methods utilized at the site.

3.1.1 Soil Borings

Using a powered direct-push drill rig, Cascade Drilling, Inc. (Cascade Drilling) of Woodinville, Washington, provided the drilling services and obtained all required permits from the Washington Department of Ecology (Ecology). A private utility locate was conducted by APS Locates prior to drilling at the site and the Washington One-Call notification was also completed. A total of 20 borings were completed on the subject properties and are shown on Figure 2.

The direct-push probe consists of a section of hollow steel rod attached to a 5-foot long macro core sample barrel. After a section of the steel rod was advanced in each boring to specific sampling depths, the sampler, lined with a clear acetate liner, was attached to the rod and advanced 5 feet. The acetate liner containing the soil sample was then removed from the sample barrel, a clean liner inserted into the sample barrel, and the steel rod replaced into the boring. Borings were advanced to approximately 15 to 20 feet bgs on the subject property. Field boring logs are included in Appendix A.

The collection of soil samples from each boring was based on field observations and the goals of this assessment. In general, if there were no olfactory, visual, or PID indications of contamination, samples were collected from approximately the top five feet of soil, and between approximately 5 and 10 feet bgs. In most cases, deeper samples were collected at approximately 10 to 15 feet bgs. Sample nomenclature includes the boring identification and the depth from which the sample was collected. For example, the sample collected from boring B-1 at a depth of 1.5 feet bgs is labeled B-1-1.5.

Soil samples were transferred from the clear PVC liners into appropriately labeled, laboratory-supplied 4- and 8-ounce glass jars with Teflon[®]-lined lids and placed into a cooler with ice. Samples intended for volatile analysis (gasoline or benzene, ethylbenzene, toluene, and xylenes [BTEX]) were collected by EPA Method 5035 using a T-core sampler/syringe and transferred into laboratory-supplied and preserved VOA vials. The samples were transported under chain-of-custody procedures to ALS Environmental in Everett, Washington. Only select samples were analyzed by the laboratory. Laboratory analysis generally focused on petroleum hydrocarbons using the Northwest Methods for gasoline-range petroleum hydrocarbons (NWTPH-Gx) and diesel-range petroleum hydrocarbons (NWTPH-Dx). Based on petroleum results or other indications, a subset of the samples were analyzed for BTEX using EPA Method 8021, volatile organic compounds (VOCs) using EPA Method 8260B, polycyclic aromatic hydrocarbons (PAHs) using EPA Method 8270-SIM, and/or MTCA (5) metals using the EPA Method 6000/7000 series.

3.1.2 Groundwater

Groundwater samples for laboratory analysis were collected from eight locations (borings B-1, B-5, B-10, B-11, B-13, B-15, B-17 and B-18) using the probe system four-foot long by ¾-inch diameter sealed screen sampler. The groundwater sample locations are included on Figure 2.

The groundwater sample probe was advanced to the desired sampling depth and the screen exposed by retracting the probe rods. Clean polyethylene tubing was then inserted through the steel rod to the bottom of the screen and attached at the surface to a peristaltic pump. Prior to collecting groundwater samples, the borings were purged until they were emptied and allowed to recharge or until approximately three bore volumes of groundwater were removed and the groundwater cleared. After purging activities were complete, groundwater samples were collected using the peristaltic pump. The samples were transferred into appropriately labeled 40-milliliter glass vials with Teflon® septum lids and preserved with dilute hydrochloric acid. Additional samples were collected using the surface pump and transferred into appropriately labeled 32-ounce glass amber bottles and 500-milliliter plastic bottles with Teflon®-lined lids.

The groundwater samples were placed into a cooler with ice and transported under chain-of-custody procedures to ALS Environmental for analysis. The samples were analyzed for gasoline and diesel-range petroleum hydrocarbons by Northwest Methods NWTPH-Gx and NWTPH-Dx. In addition, select samples (up to 5) were additionally analyzed for VOCs, PAHs and/or MTCA (5) metals using EPA Methods 8260B, 8270-SIM, and 6010/7471 series, respectively.

3.2 Laboratory Analytical Results

The following sections summarize the soil and groundwater analytical results for each of the three properties investigated.

3.2.1 Property EL297

A total of five borings (B-1 through B-5) were completed on property EL297. The location of the borings are shown on Figure 2. Soil analytical results are summarized in Tables 1 and 2 and groundwater analytical results are summarized in Tables 3 and 4. Selected soil and groundwater analytical data is included on Figures 3 and 4, respectively. Copies of the laboratory reports and chain-of-custody documentation are included in Appendix B. Analytical results were primarily compared to the Washington State Model Toxic Control Act (MTCA) Method A and B cleanup levels.

3.2.1.1 Soil

Gasoline and diesel-range petroleum hydrocarbons were not detected in any of the soil samples analyzed (Table 1). Oil-range petroleum hydrocarbons were detected at a concentration of 50 milligrams per kilogram (mg/kg) in boring B-1 at 11 feet bgs, significantly below the MTCA Method A cleanup level of 2,000 mg/kg. No other oil was detected in any of the soil samples, including in the sample collected from boring B-1 at 5.5 feet bgs (Table 1).

Based on the lack of significant gasoline or diesel-range petroleum hydrocarbons detected, additional analysis for VOCs and/or PAHs were not conducted (Tables 1 and 2).

MTCA 5 metals (mercury, arsenic, cadmium, chromium, and lead) were analyzed in three of the soil samples collected on property EL 297. As shown on Table 2, none of the concentrations of metals detected were significant and all were below MTCA Method A cleanup levels.

Based on the soil sampling conducted, it appears that soil contamination on property EL 297 is limited. No field evidence (visual, odor, or photoionization detector [PID] readings) of contamination was observed in any of the borings. The single detection of oil in boring B-1 does not constitute a significant concern and is well below Ecology cleanup levels. Based on the depth of the boring (near the water zone), it appears that the detection of oil could be associated with groundwater contamination (see Section 3.2.1.2 below).

3.2.1.2 Groundwater

Gasoline and diesel-range petroleum hydrocarbons were not detected in groundwater samples collected from borings B-1 and B-5. Oil-range petroleum hydrocarbons were detected in boring B-1 at a concentration of 0.26 milligrams per liter (mg/L). The oil concentration is below the MTCA Method A cleanup level of 0.5 mg/L. Oil-range petroleum hydrocarbons were not detected in boring B-5.

Low levels of PAHs were detected in the groundwater sample collected from boring B-1. However, the concentrations detected were significantly below the MTCA Method A or B cleanup levels (Table 3). Low concentrations of metals (arsenic and chromium) were detected in the sample, but were significantly below MTCA cleanup levels (Table 4).

PAHs and VOCs were not detected in the groundwater sample collected from boring B-5.

Based on the groundwater sampling, it appears that some contamination is associated with the area near boring B-1, which is located in the far northwest corner of the property. No other contamination (soil or groundwater) was detected on the property. Based on the presumed groundwater direction to the southwest, there is potential that the groundwater contamination may be from an off-site source. In any event, the contamination appears to be limited to heavy-end (oil) petroleum hydrocarbons and is below Ecology's cleanup levels. Therefore, the likelihood of cleanup actions on the subject property is low.

3.2.2 Property EL296

A total of seven borings (B-6 through B-12) were completed on property EL296. The location of the borings are shown on Figure 2. Soil analytical results are summarized in Tables 1 and 2 and groundwater analytical results are summarized in Tables 3 and 4. Selected soil and groundwater analytical data is included on Figures 3 and 4, respectively. Copies of the laboratory reports and chain-of-custody documentation are included in Appendix B. Analytical results were primarily compared to the MTCA Method A and B cleanup levels.

3.2.2.1 Soil

Gasoline-range petroleum hydrocarbons were not detected in any of the samples analyzed. In addition, diesel and oil-range petroleum hydrocarbons were not detected in any of the samples analyzed (Table 1).

Based on the lack of gasoline or diesel-range petroleum hydrocarbons, VOCs and/or PAHs were not analyzed (Tables 1 and 2).

MTCA 5 metals (mercury, arsenic, cadmium, chromium, and lead) were analyzed in three soil samples. None of the concentrations of metals detected were significant and all were below MTCA Method A cleanup levels (Table 2).

Based on the soil sampling conducted, it appears that soil contamination on property EL 296 is limited. No field evidence (visual, odor, or PID readings) of contamination was observed in any of the borings and none of the soil samples analyzed showed any detections of contaminants at significant levels. As noted during the previous environmental review, there were some detections of gasoline, lube oil, diesel, VOCs and metals in four borings completed in 2015, but were below MTCA cleanup levels (Parametrix 2017a).

3.2.2.2 Groundwater

Gasoline and diesel-range petroleum hydrocarbons were not detected in groundwater samples collected from boring B-10. In addition, gasoline-range petroleum hydrocarbons were not detected in boring B-11. Diesel and oil-range petroleum hydrocarbons were detected in boring B-11 at concentrations of 0.51 mg/L and 0.52 mg/L, respectively. The diesel and oil concentrations are slightly above the MTCA Method A cleanup level of 0.5 mg/L.

PAHs were not detected in the groundwater sample from boring B-10.

VOCs were not detected in the groundwater sample from boring B-11. Low concentrations of metals (arsenic, chromium, and lead) were detected in the sample, but were significantly below MTCA cleanup levels.

Based on the groundwater sampling, it appears that some contamination is associated with the area near boring B-11, which is located in the far southwest corner of the property. Based on the presumed groundwater direction to the southwest, there is potential that the groundwater contamination may be from an on-site source or from the adjacent properties. As noted during the previous environmental review, petroleum hydrocarbons and VOCs were not detected at significant levels in four borings in 2015 (Parametrix 2017a). The current concentrations of diesel-range petroleum hydrocarbons is slightly above the MTCA cleanup level; thus, the presence of groundwater contamination does present some concern and potential future liability. However, it is not expected that significant remedial actions would be necessary.

3.2.3 Property EL299

A total of eight borings (B-13 through B-20) were completed on property EL299. The location of the borings are shown on Figure 2. Soil analytical results are summarized in Tables 1 and 2 and groundwater analytical results are summarized in Tables 3 and 4. Selected soil and groundwater analytical data is included on Figures 3 and 4, respectively. Copies of the laboratory reports and chain-of-custody documentation are included in Appendix B. Analytical results were primarily compared to the MTCA Method A and B cleanup levels.

3.2.3.1 Soil

As shown in Table 1, 15 soil samples were analyzed for petroleum hydrocarbons; 10 of which had no detections of gasoline, diesel, and/or oil.

Petroleum hydrocarbons were detected in all three soil samples collected from boring B-15 from 1 to 6 feet bgs in the northeast corner of the property. The maximum concentration detected was oil-range petroleum hydrocarbons at 4,800 mg/kg from 6 feet bgs, which exceeds the MTCA Method A cleanup levels. Due to shallow groundwater present, deeper soil samples could not be collected from the boring. However, no diesel and oil-range petroleum hydrocarbons were detected in borings B-14, B-17, and B-20 to the west, southwest, and south, respectively, suggesting that the lateral and vertical extent of contamination is limited (see Figure 3).

The sample from boring B-15 at 6 feet bgs was further analyzed for PAHs and VOCs. Several PAH compounds were detected, but at concentrations significantly lower than the MTCA Method A cleanup levels. In addition, several VOC compounds were also detected, but at concentrations lower than the MTCA Method A cleanup levels. Low concentrations of metals were detected in samples collected from 3.5 feet bgs, but at concentrations below the MTCA Method A cleanup levels. Based on the sample results, the area near boring B-15 appears to have been impacted by petroleum hydrocarbons. Associated constituents, PAHs and VOCs, appear to be limited and do not present a significant risk.

Gasoline-range petroleum hydrocarbons were detected in the sample collected from boring B-17 at 1.5 feet bgs at a concentration of 100 mg/kg. Based on the gasoline detection, BTEX was analyzed for the sample; all BTEX compounds were non-detect. Based on the lack of benzene, the established MTCA cleanup level for gasoline is 100 mg/kg. Gasoline was not detected in the sample collected from 6 feet bgs. Therefore, based on the sample results, the gasoline contamination appears to be limited in extent, both vertically and laterally, and the concentration is not significant.

Based on the soil sampling conducted, it appears that significant soil contamination on property EL 299 is generally limited to the area near boring B-15 in the northwest corner of the property. No field evidence (visual, odor, or PID readings) of contamination was observed in any of the other borings. The elevated concentrations of diesel and oil-range petroleum hydrocarbons in samples collected from B-15 is of some concern. Based on the lack of detections in surrounding borings (B-14, B-17, and B-20), it appears that contamination may be limited in extent. It is not expected that significant remedial efforts will be required. However, liability from the existing contamination does exist and excavation and/or disturbance of any materials in that area will need to be properly handled, managed, and disposed.

3.2.3.2 Groundwater

Gasoline and diesel-range petroleum hydrocarbons were not detected in groundwater samples collected from borings B-13, B-17, and B-18. Oil was detected at a concentration of 0.27 mg/L in boring B-18, but is below the MTCA Method A cleanup level of 0.5 mg/L.

Gasoline, diesel and oil-range petroleum hydrocarbons were detected in boring B-15 at concentrations of 0.076 mg/L, 2.6 mg/L and 4.5 mg/L, respectively. The diesel and oil concentrations are above the MTCA Method A cleanup level of 0.5 mg/L. As discussed above, significant soil contamination was observed in the upper 10 feet of boring B-15.

Low concentrations of PAHs were detected in the groundwater sample collected from boring B-15. With the exception of 1-methylnaphthalene, the concentrations were significantly below MTCA cleanup levels. Very low levels of PAHs were also detected in boring B-18. No PAHs were detected in the groundwater sample collected from boring B-13.

VOCs were not detected in the groundwater samples from borings B-13, B-15, and B-18. Low concentrations of metals (arsenic, cadmium, chromium, and lead) were detected in the samples, but were significantly below MTCA cleanup levels.

Based on the groundwater sampling, it appears that some contamination is associated with the area near boring B-15, which is located in the northeast corner of the property. Based on the presumed groundwater direction to the southwest, there is potential that the groundwater contamination may be from an off-site source; however, soil contamination detected in boring B-15 at elevated concentrations does suggest a local source. The concentrations of diesel-range petroleum hydrocarbons are above the MTCA cleanup level; thus, the presence of groundwater contamination in the northeast corner of the EL299 does present some concern and potential future liability.

4. CONCLUSIONS

Parametrix conducted a Phase II ESA at three properties (EL296, EL297, and EL299) in the 130th Avenue NE area of Bellevue, Washington. Based on the findings of this investigation, Parametrix reached the following conclusions:

1. A previous environmental review was conducted on the properties and identified several potential environmental issues, including: 1) the historical operation of commercial businesses on all three properties, 2) a known UST and associated soil contamination in the southern portion of property EL299, 3) a former UST on an adjacent property (EL 297.1), and 4) the potential to have been impacted by adjacent or nearby property releases.
2. A Phase II investigation was conducted at the site to evaluate subsurface conditions. In general, the 20 borings completed (labeled B-1 through B-20) were primarily utilized to investigate the general site conditions associated with historical use of the property and establish baseline environmental conditions. The work was completed as part of the City of Bellevue's due diligence in response to potentially acquiring the properties from Sound Transit. The City of Bellevue may potentially pursue transit-oriented development (TOD) on the properties.
3. Based on the sampling conducted on property EL297, it appears that limited soil and groundwater contamination exists on the property. Oil-range petroleum hydrocarbons were detected at a concentration of 50 mg/kg in boring B-1 at 11 feet bgs; however, it was significantly below the applicable MTCA cleanup level and does not constitute a concern. No other contaminants were detected in any of the soil samples on the property and no field evidence (visual, odor, or PID readings) of contamination were observed. Oil-range petroleum hydrocarbons (0.26 mg/L) were also detected in the groundwater sample collected from boring B-1, which is located in the northeast corner of the property. Constituent data suggests that the risk associated with groundwater contamination is low. No other groundwater contamination was detected on the property. Based on the presumed groundwater direction to the west-southwest, there is potential that the groundwater contamination may be from an off-site source. In any event, the contamination appears to be limited to petroleum hydrocarbons and is below Ecology's cleanup levels. Therefore, it is not expected that any cleanup actions would be required on the subject property. However, the low levels of groundwater contamination on the property does present some potential environmental liability and should be considered during acquisition and/or planning for future construction and/or excavation.
4. Based on the soil sampling conducted on property EL296, it appears that soil and groundwater contamination is limited. No field evidence (visual, odor, or PID readings) of contamination was observed in any of the borings and none of the soil samples analyzed showed any detections of contaminants at significant levels. As noted during the previous environmental review, there were some detections of several contaminants in soil samples from four borings completed in 2015, but were below MTCA cleanup levels. Diesel (0.51 mg/L) and oil (0.52) concentrations were detected in groundwater samples collected from boring B-11, which is located in the southwest corner of the property. The concentrations detected slightly exceed the Ecology cleanup levels of 0.5 mg/L. Based on the presumed groundwater direction to the west-southwest, there is potential that the groundwater contamination may be from an on-site source or from the adjacent properties. As

noted during the previous environmental review, petroleum hydrocarbons were not detected in groundwater at significant levels in four borings in 2015. Based on this information, it appears that contamination may be limited in extent and magnitude and significant remedial actions are not likely necessary. However, the low levels of groundwater contamination on the property does present some potential environmental liability and should be considered during acquisition and/or planning for future construction and/or excavation.

5. Based on the soil sampling conducted, it appears that soil contamination on property EL 299 is present, primarily in the area near boring B-15 in the northwest corner of the property. The elevated concentrations of diesel and oil-range petroleum hydrocarbons (maximum of 4,800 mg/kg) in samples collected from B-15 exceeds the MTCA Method A cleanup levels. Based on the lack of detections in surrounding borings (B-14, B-17, and B-20), it appears that contamination may be limited in both lateral and vertical extent. However, environmental liability from the existing contamination does exist and excavation and/or disturbance of any materials in that area will need to be properly handled, managed, and disposed. Based on the groundwater sampling, it appears that some contamination is associated with the area near boring B-15. Based on the presumed groundwater direction to the southwest, there is potential that the groundwater contamination may be from an off-site source; however, soil contamination detected in the boring suggests a local source. The concentrations of diesel-range petroleum hydrocarbons in groundwater significantly exceeds the MTCA Method A cleanup level; thus, the presence of groundwater contamination presents a moderate concern. The soil and groundwater contamination on the property presents an environmental liability and must be considered during acquisition and/or planning for future construction/excavation.
6. In relation to future TOD opportunities, the presence of soil and groundwater contamination on the properties does present some concern, but does not appear to be a significant barrier to development options and can be managed with appropriate measures. If significant excavation is required (i.e. subsurface parking structures or similar), it appears that the majority of soil at the site may potentially meet unrestricted use criteria; thus, significantly reducing potential costs. However, several areas of the site, particularly on property EL 299, appear to be impacted above MTCA cleanup levels and all soil in those areas will need to be managed appropriately to ensure health and safety of construction workers, as well as to ensure it is properly handled and disposed accordingly. Similarly, groundwater appears to be moderately impacted in several areas of the site and is known to be very shallow (<10 feet). If future construction involves subsurface structures, dewatering during excavation and trenching activities may potentially be required and proper handling, management, and disposal of groundwater will need to be conducted, potentially increasing construction costs significantly.

5. RECOMMENDATIONS

Based on the conclusions of this investigation, Parametrix offers the following recommendations:

1. The properties have been impacted by petroleum hydrocarbons and associated constituents in both soil and groundwater. Moderate soil impacts are primarily in the northeastern portion of property EL 299, with very low impacts in the remaining properties. Moderate groundwater impacts appear to coincide with soil impacts in the northeastern portion of property EL 299, with much less groundwater impacts in the northwestern portion of EL 297 and southwestern corner of EL 296. While soil and groundwater impacts do not appear to present a risk to current site use and occupants, it is recommended that potential cleanup alternatives and/or future liability costs be considered during any acquisition process and a change in site use, particularly for future workers or residents.
2. If the property is acquired and redeveloped, it is recommended that a contaminated media management plan (CMMP) be prepared for the site to guide excavation and construction activities, and describes potential contaminants, notification procedures, safety precautions, handling, storage and sampling of the contaminated materials. In addition, since the depth of groundwater is less than 10 feet bgs, there is potential that contaminated groundwater may be encountered during excavation or trenching activities for subsurface structures. Therefore, the CMMP should be prepared to include handling, management, and disposal of groundwater during construction activities.
3. Based on environmental review of past investigations and the results of the current investigation, it does not appear that the potential for TOD would be precluded by existing environmental conditions. Significant remedial actions may not be required, but existing contamination will need to be considered during any redevelopment and managed appropriately (per a CMMP). Reportedly, an excavation is planned to be conducted by Sound Transit during the station development that allows up to 1,000 yards of contaminated soil for off-site disposal (based on East Link Extension Drawing No. L87-CXP031). It is recommended that the City of Bellevue ensure that work is completed prior to any transfer of the property and appropriate documentation is provided. If feasible, it is recommended that contaminated soil in the northeast corner of EL 299 be removed prior to transfer of the property to minimize future environmental liability to the City. Additional investigation may be required to fully delineate the contamination; however, there is potential that the work could be completed as part of the construction activities and the planned contaminated soil excavation as noted above.
4. It is recommended that future environmental liability associated with the properties be considered by the City. It is recommended that any entity entering into an acquisition agreement with the site owner should consider legal protection against the discovery of previously unknown environmental conditions. This legal protection can be obtained in a number of alternatives, but is commonly completed through an Indemnification Clause in the Purchase and Sale Agreement or a Prospective Purchasers Agreement program.

Notes

Only contaminants detected in one or more samples are shown.

mg/L: milligrams per liter

µg/L: micrograms per liter

BTEX - Benzene, Toluene, Ethylbenzene, Xylenes

VOC - Volatile Organic Compounds

NV - No Value

Highlighted = Constituent detected above MTCA Method A cleanup level

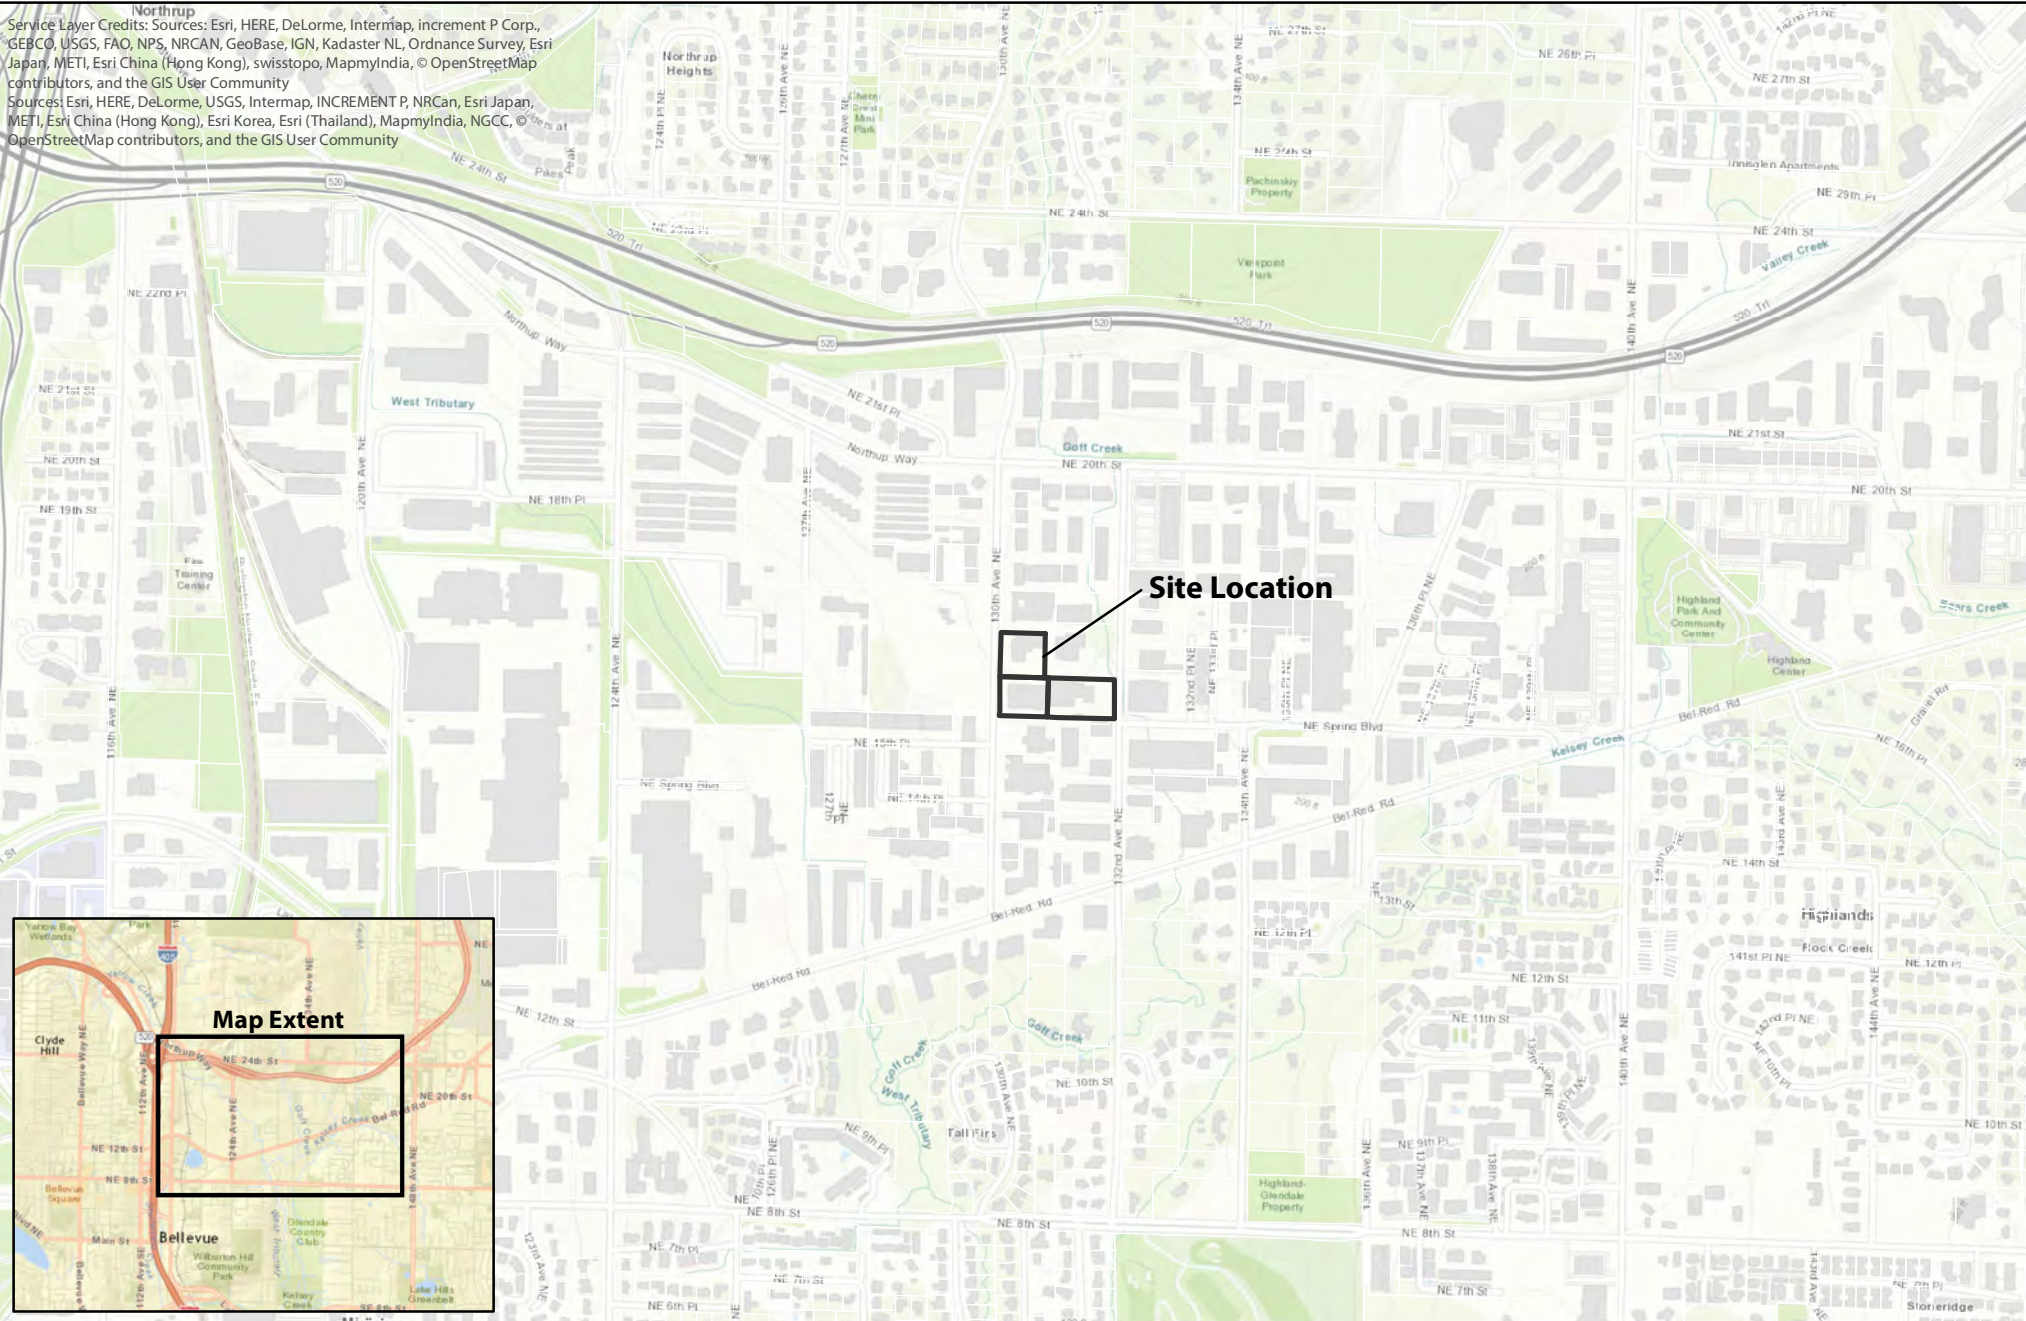

Highlighted = Constituent detected above MTCA Method B cleanup level

Laboratory Analytical Reports

September 6, 2017

Mr. Rick Wadsworth
Parametrix, Inc.
700 NE Multnomah, Suite 1000
Portland, OR 97332

Dear Mr. Wadsworth,

On August 15th, 48 samples were received by our laboratory and assigned our laboratory project number EV17080081. The project was identified as your City of Bellevue - 130th Ave NE Properties. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Rick Bagan
Laboratory Director

CLIENT CONTACT: Rick Wadsworth DATE RECEIVED: 08/15/2017
CLIENT PROJECT: City of Bellevue - 130th Ave NE Properties COLLECTION DATE: 8/14/2017 9:45:00 AM
CLIENT SAMPLE ID B-11-W WDOE ACCREDITATION: C601

SAMPLE DATA RESULTS

Table with 5 columns: SURROGATE, METHOD, %REC, ANALYSIS DATE, ANALYSIS BY. Rows include TFT, C25, 1,2-Dichloroethane-d4, Toluene-d8, and 4-Bromofluorobenzene.

U - Analyte analyzed for but not detected at level above reporting limit.
Chromatogram indicates that it is likely that sample contains an unidentified diesel range product and light oil/lube oil.
Diesel range product results biased high due to oil range product overlap.

U - Analyte analyzed for but not detected at level above reporting limit.
 Chromatogram indicates that it is likely that sample contains highly weathered gasoline, weathered diesel and light oil.
 Diesel range product results biased high due to oil range product overlap.

August 25, 2017

Mr. Rick Wadsworth
Parametrix, Inc.
700 NE Multnomah, Suite 1000
Portland, OR 97332

Dear Mr. Wadsworth,

On August 16th, 3 samples were received by our laboratory and assigned our laboratory project number EV17080088. The project was identified as your City of Bellevue 130th Ave NE Properties. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Rick Bagan
Laboratory Director

Subject: **Restrictive Covenant; Former Journal American Facility,
1705 132nd Avenue NE, Bellevue, WA; Facility ID # 2558
Ecology Cleanup Site ID 5149**

Dear Ms. Welty,

As you were informed previously, Sound Transit purchased the above referenced site in September of 2015 from Mr. Richard Moline of 22424 NE 200th St., Woodinville, WA (dba Enilom Properties, LLC). In the process of redeveloping the property as part of our East Link Extension Light Rail Project, Sound Transit has recently demolished the former Journal American building and removed the residual contaminated soil as defined in cleanup documents and in the Restrictive Covenant associated with the property.

This letter is intended to provide written notification to Ecology, as required under paragraph (d) of the covenant, that Sound Transit has removed the former Journal American building and loading dock referenced in the covenant and has completed the removal and disposal of the residual contaminated soil which remained following the 1996 Independent Remedial Action and which was the subject of the Restrictive Covenant.

Attached please find paper and electronic copies of a report which documents the removal of the contaminated soil and demonstrates that it was successfully remediated to current unrestricted land use levels as set forth in WAC 173-340-700 through 760.

Furthermore, Sound Transit is entering into an agreement with the City of Bellevue to transfer ownership of the subject parcel to the City. Please consider this letter to fulfill the notification required under paragraph "F" of the Restrictive Covenant. The City is aware of the existence of this Covenant.

Should you have any questions or wish to discuss our planned activities, please contact me at 206-398-5227 or at Mark.Menard@soundtransit.org.

1.0 INTRODUCTION

Sound Transit, officially the Central Puget Sound Regional Transit Authority, is a public transit agency serving the Seattle metropolitan area in Washington State. Beginning in 2015, Sound Transit commenced construction on the East Link light rail corridor through Bellevue, Washington. This project is divided into four segments referred to as E320, E330, E335, and E340. As part of the project, Sound Transit acquired several parcels of property and performed demolition and cleanup of environmental contaminants as necessary to construct the project.

This report documents contaminated soil removal completed by Sound Transit to comply with the Restrictive Covenant that had been recorded for the Journal American site, located on King County tax parcel number 2825059191, at 1625 132nd Avenue NE in Bellevue, Washington (“the Site”). The location of the Site is shown on Figure 1. The Site is currently identified as a confirmed contaminated site by the Washington State Department of Ecology (Ecology) and is assigned Facility Site ID #2558.

The Site is identified by Sound Transit as parcel EL299 in the construction documents and is part of the E340 segment being constructed under Sound Transit Contract No. RTA/CN 0168-15. INNOVEX Environmental Management, Inc. (INNOVEX) conducted activities related to the contaminated soil removal and prepared this report as a subcontractor to Sound Transit’s prime contractor, HDR.

The contaminated soil removal was performed to comply with the Restrictive Covenant that was recorded for the Site in 1996 (Appendix A). The Covenant contained the following statement:

“In the event the cement flooring and foundation of the press building or the loading dock are demolished, all total petroleum hydrocarbon (TPH) contaminated soils above applicable Washington Administrative Code (WAC) 173-340-700 through 173-340-760 cleanup standards shall be removed and disposed of in accordance with applicable law or, in the alternative, appropriate sampling and testing shall be completed that documents that the remaining TPH contaminated soils are below applicable cleanup criteria. A report documenting these facts shall be submitted to Ecology or its successor agency for review and approval.”

The contaminated soil removal was performed in a manner generally consistent with the requirements of the Washington State Model Toxics Control Act (MTCA) Cleanup Regulation (Ecology, 2007), including section 173-340-515 (independent remedial actions), and section 173-340-300 (site discovery and reporting).

1.1 Objective

The primary objective of the work described in this report was to remove petroleum hydrocarbon-contaminated soil in order to obtain Ecology consent to release the Restrictive Covenant. INNOVEX completed the following tasks to meet this objective:

- Revised the contaminated soil area boundaries shown in the Restrictive Covenant based on current MTCA Method A Cleanup Levels (CULs)
- Included additional areas of contaminated soil discovered since the Restrictive Covenant was recorded
- Observed and documented removal of contaminated soils
- Collected representative confirmation soil samples for laboratory analysis to document contaminated soil removal
- Reviewed soil sample analytical results and compared detected analyte concentrations to applicable CULs

Selected photographs taken during the Site activities are provided in Appendix B. Laboratory analytical reports are provided in Appendix C. Soil disposal tickets are provided in Appendix D.

1.2 General Site information

This property is 1.62 acres in size and previously included a large building and surface parking lot. The building was demolished in July 2017 as part of the East Link light rail construction. The building had been used for various commercial businesses and appeared to include one or more additions.

The property is located within the Puget Sound Basin, a broad, low-lying region between the Cascade Range to the east and the Olympic Mountains to the west. The existing topography and regional geology have been largely shaped by glacial activity. The region is mostly underlain by Vashon till, a light-gray virtually unsorted, unstratified compact mixture of boulders, cobbles, sand, silt, and clay that can be up to 150 feet thick.

The regional geology consists of a sequence of glacially consolidated soils overlying bedrock. The underlying soils were consolidated under the weight of glaciers and became generally very hard and/or compact. Surface soils in the subject property area generally consist of mixtures of sand, silt, and gravel of varying thickness and distribution.

Topography at the Site slopes to the southwest. Shallow soil consists mostly of sand, intermixed with gravel and silt.

Groundwater levels in this area range from about 5 to 15 feet below ground surface (bgs). Groundwater flow in this portion of the Puget Lowland is generally toward the south.

Goff Creek is located adjacent to the east of the site and flows southward.

1.3 Current Site Use

The Site is currently part of the E340 segment being constructed as part of the Sound Transit East Link light rail corridor through Bellevue, Washington. Upon completion of the East Link light

rail construction in 2023, property ownership will be transferred to the City of Bellevue, which intends to use the property for transit-oriented development that includes accommodation for a 300-stall park-and-ride facility.

2.0 SITE HISTORY

The Site was originally part of a larger parcel occupied by Whitescarver Brothers Trucking and the Ace Bulldozing Company, and then by the Journal American newspaper printing and publishing facility, with an address of 1705 132nd Avenue NE. The press building was constructed in 1983 on the southern portion of the property that was historically used by the trucking and bulldozing companies. The southern portion (EL299) became a separate parcel with a separate address of 1625 132nd Avenue NE. The last known use of the Site was as an Arnold's Appliance store and warehouse. Petroleum hydrocarbon contamination was identified on the EL299 parcel only. The northern parcel had been erroneously included in the Restrictive Covenant and Ecology consented to recording a Release of Restrictive Covenant for that parcel.

Petroleum hydrocarbon-contaminated soils were encountered at the Journal American press building facility in two areas where underground storage tanks (USTs) had been decommissioned and at an associated fuel dispensing island (CH2M Hill, 1995). One UST area was north of the press building (north UST area). This area consisted of two 5,000-gallon gasoline storage tanks. The other tank area was located south of the press building (south UST area); this area consisted of a single tank. The fuel dispensing island for this tank was located beneath the press building in the area of the maintenance bay. Details regarding the Site investigation history are presented in the following sections.

2.1 1994 Site Investigations

Subsurface investigations were conducted at the Site between 1994 and 1995 (CH2M Hill, 1995). Initially, 12 borings and one test pit were completed to investigate soil in the two UST areas. In addition, four shallow soil borings were completed around the printing press. Sample results from the initial borings and test pit detected petroleum-related contamination in soils in both UST areas. Approximately 75 tons of petroleum hydrocarbon-contaminated soil was removed from the north UST area. Soil samples collected from the sidewalls and bottom of the excavation confirmed removal of the contamination. No additional investigation or remedial action in the vicinity of the north UST area is known.

Four groundwater monitoring wells were installed in the south UST area to evaluate the possible presence of petroleum hydrocarbons in groundwater (CH2M Hill, 1995). A groundwater monitoring program was implemented after gasoline, diesel, and xylene were detected at concentrations above the MTCA CUL for groundwater in a water sample taken from an open borehole drilled within the press building. However, monthly groundwater sampling conducted from September 1994 through February 1995 detected no petroleum-related contaminants in groundwater at concentrations that approached or exceeded MTCA Method A CULs.

Subsequently, 60 soil borings were completed within the press building and south of the press building to further delineate the horizontal and vertical extent of petroleum hydrocarbon contamination in the south UST area (CH2M Hill, 1995) (Figure 2). Approximately 40 tons of petroleum hydrocarbon-contaminated soil were removed from the area immediately south of the press building. Additional soil removal in this area was not possible due to concerns regarding the structural stability of the adjacent press building foundation wall.

2.2 Restrictive Covenant

Based on the investigation results, Site use, surface cover, and CULs, it was determined that the Site was eligible for a No Further Action (NFA) determination if a Restrictive Covenant was recorded for the property. The Restrictive Covenant was recorded in 1996, it is provided in Appendix A. Selected requirements of the Restrictive Covenant that are pertinent to contaminated soil removal are summarized below:

- Written notification must be given to Ecology or its successor agency before excavating, moving, or removing the soils or material beneath the press building, loading dock, and asphalt paving which are capped by these structures.
- In the event the cement flooring and foundation of the press building or the loading dock are demolished, all TPH contaminated soils above applicable WAC 173-340-700 through 173-340-760 cleanup standards shall be removed and disposed of in accordance with applicable law or, in the alternative, appropriate sampling and testing shall be completed that documents that the remaining TPH contaminated soils are below applicable cleanup criteria. A report documenting these facts shall be submitted to Ecology or its successor agency for review and approval.
- Upon remediation (by removal or otherwise) of the petroleum contaminated soil to below those levels set forth in WAC 173-340-700 through 173-340-760, the owner may record an instrument stating that this Restrictive Covenant is of no further force or effect, provided the owner has the consent of Ecology or its successor agency to so do.

The Restrictive Covenant includes a figure outlining two separate areas of TPH contamination in the south UST area, based on the 1995 MTCA Method A CULs. However, it does not distinguish between soil contaminated with gasoline range hydrocarbons (TPH-g) and diesel range hydrocarbons (TPH-d) (Appendix A). The currently applicable CUL of 100 milligrams per kilogram (mg/kg) for TPH-g is unchanged since 1995; therefore, the area of gasoline contaminated soil is unchanged. The CUL for TPH-d was changed in 2001 from 200 mg/kg to 2,000 mg/kg. The areas of TPH-d contamination were, therefore, revised to reflect this change. The original and revised contaminated soil areas are shown on Figure 2. The revised boundaries of the two separate areas of contaminated soil are referred to as Area 1 and Area 2.

Ecology issued the NFA letter on October 7, 1996, after the Restrictive Covenant was recorded. The NFA determination letter is included as Appendix E.

2.3 Department of Ecology Periodic Reviews

Ecology conducts periodic reviews of post-cleanup site conditions and monitoring data to ensure that human health and the environment are being protected at the Site (Ecology, 2009 and 2014). The following conclusions were presented in the 2009 and 2014 reviews:

- The cleanup actions completed at the Site appear to be protective of human health and the environment.
- Soils CULs had not been met at the standard point of compliance for the Site; however, the cleanup action has been determined to comply with cleanup standards since the long-term integrity of the containment system is ensured, and the requirements for containment technologies are being met.
- The Restrictive Covenant for the property is in place and continues to be effective in protecting public health and the environment from exposure to hazardous substances and protecting the integrity of the cleanup action.

Based on the periodic reviews, Ecology concluded that the requirements of the Restrictive Covenant were being met. No additional cleanup actions were required.

2.4 2017 Site Investigations

In 2017, there were two soil investigations at the Site. Sound Transit commissioned an investigation by Shannon and Wilson, Inc. (S&W) (S&W, 2017), and the City of Bellevue retained Parametrix (Parametrix, 2017) to perform additional investigations across a broader area that included the Site. These investigations largely confirmed the results of the previous investigations as documented in the Restrictive Covenant; however, each investigation identified a new area of TPH-d contaminated soil.

The S&W investigation was completed to evaluate the presence of contaminants identified during previous environmental investigations (S&W, 2017). Only one boring (GP-2-17) contained contaminants in soil exceeding the applicable MTCA CULs. This resulted in identification of an area of TPH-d contaminated soil beneath the southwest corner of the former building that was not identified in the Restrictive Covenant. This additional area of contaminated soil is referred to as Area 3 in this report. The soil sample locations from the S&W investigation are shown on Figure 3.

The Parametrix investigation was completed as part of the City of Bellevue's due diligence in response to potentially acquiring the property from Sound Transit (Parametrix, 2017). The investigation identified TPH-d contaminated soil in the northeast corner of the Site that was not identified in the Restrictive Covenant. The area of contaminated soil identified by this investigation is referred to as Area 4 in this report. The soil sample locations and results from this investigation are shown on Figure 4.

The additional areas of TPH-d contamination identified during the 2017 investigations (Areas 3 and 4) are shown on Figure 5.

3.0 CLEANUP LEVELS

CULs specified in the MTCA Cleanup Regulation (Ecology, 2007) were used to evaluate analytical results for the Site contaminants of concern: TPH-g, TPH-d, and oil range hydrocarbons (TPH-o). Detected analyte concentrations in soil were compared to MTCA Method A Soil CULs for Unrestricted Land Uses. The MTCA CULs used to evaluate each detected analyte are included with analytical results provided in Tables 1 and 2.

4.0 CONTAMINATED SOIL REMOVAL

In August 2018, Sound Transit provided Ecology with written notification of their intent to excavate the contaminated soil, as required by the Restrictive Covenant.

A total of four contaminated areas (Areas 1 through 4) were identified at the Site (Figure 5). Areas 1 and 2 are those areas identified in the Restrictive Covenant. Areas 3 and 4 are those areas identified in 2017. Although soil in Areas 3 and 4 was not required to be removed to be in compliance with the Restrictive Covenant, Sound Transit elected to remove the soil in these areas at the same time as Areas 1 and 2 to ensure proper segregation and disposal and to avoid future delays during construction.

On January 10, 2019, KLB Construction, Inc. (KLB) excavated six exploratory test pits to confirm the location of Area 1. INNOVEX collected six soil samples from these test pits for screening purposes. Based on analytical results, soil from five of the six test pits was excavated and stockpiled. One sample (E340-EL299-190110-SW01) confirmed the western boundary of Area 1 and was used as a sidewall confirmation sample for the subsequent excavation. Excavated soil was screened and segregated as described below.

From January 16 to February 19, 2019, KLB performed excavation activities. INNOVEX was onsite to help guide the contaminated soil removal by field screening using a photoionization detector (PID). Field screening was conducted in accordance with the Sampling and Analysis Plan (SAP) prepared for this project (INNOVEX, 2018). The excavations extended to approximately 13 feet bgs at Area 1, 18 feet bgs at Area 2, 12.5 feet bgs at Area 3, and 10 feet bgs at Area 4. The final extent of each excavation is shown on Figure 6. Selected photographs taken during the contaminated soil removal activities are provided in Appendix B.

Surface soil consisted of fill material primarily composed of poorly sorted, gray-brown to tan, gravelly to silty sand with woody debris. The fill extended to depths between 6 and 7 feet bgs. Below the fill, soils generally consisted of poorly sorted, gray-tan, gravelly to silty sand, which extended to approximately 14 feet bgs. At that depth, compacted, gray, glacial till was encountered. In Area 4, a layer of peat was encountered at approximately 6 feet bgs.

Excavated soil was screened using a PID to segregate and stockpile clean, impacted, and contaminated soil. O'Neill Service Group (OSG) collected soil stockpile samples to determine disposal and re-use alternatives. A total of 223 tons of excavated soil and 91 tons of concrete debris was removed from the Site and transported to Cadman in Everett, Washington for disposal. Soil disposal tickets are provided in Appendix D. A total of 2,333 tons of excavated soil was determined by OSG to be acceptable for use as backfill in the excavation consistent with Ecology guidance (Ecology, 2016a). Analytical results for samples from excavated soil stockpiles are shown in Table 1 and the associated laboratory analytical reports are provided in Appendix C.

Groundwater was not encountered in any of the excavations.

5.0 SAMPLING AND ANALYSIS

After the contaminated soil was removed, confirmation soil samples were collected from the sidewalls and floors of the excavations. Samples were collected from the excavator bucket using disposable sampling equipment, in accordance with the SAP prepared for this project (INNOVEX, 2018). Sample collection frequency for each excavation was consistent with the Ecology Guidance for Remediation of Petroleum Contaminated Sites (Ecology, 2016a).

A total of 34 confirmation soil samples were collected and analyzed (24 excavation sidewall samples and 10 excavation floor samples).

In Area 1, excavation sidewall samples were collected at the nodes (corners) of the Area and no more than 15 feet apart. Otherwise, excavation sidewall samples were collected at a nominal frequency of one sample for every 20 linear feet, and excavation floor samples were collected at a nominal frequency of one sample for every 400 square feet. Soil sample locations are shown on Figure 6.

In Areas 2, 3, and 4, one sample was collected from each excavation sidewall and one sample was collected from each excavation floor. Soil sample locations are shown on Figure 6.

Soil samples were placed into laboratory-supplied containers, labeled, and immediately placed in a cooler with ice. Samples were delivered under standard chain-of-custody procedures to OnSite Environmental, Inc. (OnSite), a Washington State-accredited laboratory located in Redmond, Washington.

Based on the Restrictive Covenant, Ecology's Periodic Reviews, and previous investigations conducted at the Site, soil samples were submitted for the following analyses:

- TPH-g using Method NWTPH-Gx
- TPH-d and TPH-o using Method NWTPH-Dx

The laboratory performed a silica gel cleanup to remove interference from naturally occurring organic matter in the Site Soil.

6.0 ANALYTICAL RESULTS

6.1 Quality

Analytical data reports from OnSite were reviewed by INNOVEX. Laboratory-provided data quality parameters were reviewed. Data for TPH-g, TPH-d, and TPH-o were determined by INNOVEX to be acceptable for all purposes following evaluation of the quality control specifications presented in the SAP, or equivalent requirements found in the contracted commercial laboratory analytical methods. Precision and accuracy parameters were evaluated for each method, as well as temperature and holding time requirements.

OnSite followed the Ecology approved analytical methods. Precision was acceptable as demonstrated by the reported relative percent difference (RPD) values for matrix spike/matrix spike duplicates (MS/MSDs) and laboratory control sample/laboratory control sample duplicates (LCS/LCSDs). Accuracy was also acceptable, as demonstrated by the reported percent recovery values for surrogates, MS/MSDs, and LCS/LCSDs.

Two pairs of field duplicate samples were collected to assess precision of the sampling technique and instrument performance, as well as variability possibly caused by the heterogeneity of the matrix being sampled. Acceptable precision was demonstrated by the RPD values for the field duplicate sample results.

One duplicate sample was collected with OSG during soil stockpile sampling. Acceptable quality was demonstrated by the RPD values for the duplicate sample results for TPH-d and TPH-o, however the results for TPH-g are significantly different with an RPD of 187% (Table 1). This difference is likely due to the heterogeneous distribution of TPH-g in the soil and because INNOVEX used US Environmental Protection Agency (EPA) Method 5035 for sample collection while OSG used EPA Method 5030. Using Method 5035 for collecting the sample would reduce volatilization of TPH-g and can produce a higher analytical result (Ecology, 2004).

6.2 Results

INNOVEX collected a total of 34 confirmation soil samples to document site conditions after contaminated soil was removed. Analytical results for the confirmation samples represent concentrations in soil remaining in place at the Site. None of the confirmation soil samples contained TPH-g, TPH-d, or TPH-o at concentrations above applicable MTCA CULs (Table 2).

TPH-g was not detected in any of the confirmation soil samples. TPH-d was detected in 10 of the 34 confirmation soil samples with a maximum concentration of 860 mg/kg, which is below the applicable MTCA CUL of 2,000 mg/kg. TPH-o was detected in 3 of the 34 confirmation soil samples with a maximum concentration of 800 mg/kg, which is below the applicable MTCA CUL of 2,000 mg/kg.

Laboratory results for confirmation samples are shown in Table 2. Soil sample locations are shown on Figure 6. The laboratory analytical reports are provided in Appendix C.

7.0 SITE DISPOSITION

Excavation at the Site was conducted between January 16 and February 19, 2019. After laboratory analytical results confirmed the complete removal of contaminated soil, the excavations were backfilled to meet the requirements of the East Link light rail construction project. The excavations were backfilled with excavation spoils and imported fill.

8.0 SUMMARY AND CONCLUSIONS

The following conclusions are supported by the activities described above:

- The contaminated soil excavation conducted by Sound Transit resulted in the removal of approximately 223 tons of contaminated soil and 91 tons of concrete debris from the Site.
- Analysis of confirmation soil samples indicates that residual concentrations of TPH-d and TPH-o remain in soil, but at concentrations well below applicable MTCA CULs (Table 2).
- Analysis of confirmation soil samples indicates that no detectable concentrations of TPH-g remain at the Site (Table 2).
- Groundwater was not encountered and no assessment of groundwater was completed.

The extent of soil contamination identified as Areas 1 through 4 was confirmed by the removal of the contaminated soil and the results of confirmation soil sampling at the excavation limits.

9.0 RECOMMENDATIONS

Based on the findings and conclusions of the excavation and sampling effort, the contaminants that are described in the Restrictive Covenant have been removed; therefore, the Restrictive Covenant should be removed from the Site. INNOVEX recommends that Sound Transit and the City of Bellevue coordinate with the Department of Ecology Site Manager to determine the appropriate actions to remove the Restrictive Covenant from the Property. The removal of the covenant should be in accordance with the Ecology Toxics Cleanup Program Procedure 440C: Releasing Environmental Covenants under the Model Toxics Control Act (Ecology, 2016b).

10.0 LIMITATIONS

This report is for the exclusive use of Sound Transit, City of Bellevue, and their representatives. INNOVEX prepared this report in a professional manner, using that level of skill and care normally exercised for similar projects under similar conditions by reputable and competent environmental consultants currently practicing in the area, and in accordance with the terms and conditions set forth in our contract and Sound Transit Contract RTA/CN 0168-15. INNOVEX is not responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not

fully disclosed at the time the report was prepared. Also note that the facts and conditions referenced in this report may change over time and that the conclusions set forth here are applicable to the facts and conditions as described in this report. Conclusions were made within the operative constraints of the scope, budget, and schedule for this project. We believe that the conditions stated here are factual. No guarantee is made or implied. Any reliance on this report by a third party is at such party's sole risk.

Bellevue, Washington 98004

RE: Restrictive Covenant Recorded Under King County Recording No. 9609271199

Dear Mr. Horvitz and Mr. O'Brien:

The Washington State Department of Ecology (Ecology) has received a request from Northwest Media (Washington), L.P. and OB Bellevue Properties, LLC (together, the "Owners") for Ecology's consent to release the above referenced restrictive covenant (the "Restrictive Covenant") on that certain real property commonly known as 1705 132nd Avenue NE, Bellevue, Washington (the "1705 Property"). The Owners are making the request because the Restrictive Covenant was erroneously recorded against the 1705 Property together with that certain real property commonly known as 1625 132nd Avenue NE, Bellevue, Washington (the "1625 Property"). We have reviewed the Owners' request and the information provided. Ecology agrees that the Restrictive Covenant properly encumbers the 1625 Property but not the 1705 Property. Accordingly, Ecology hereby consents to the release of the 1705 Property from the Restrictive Covenant.

Please provide Ecology with copies of all documents recorded pertaining to the release of 1705 Property from the Restrictive Covenant.

Regards,

A handwritten signature in black ink, appearing to read "Joseph M. Hickey".

RECITALS

- A. Northwest Media (Washington), L.P., an Ohio limited partnership ("NMW") owns that certain real property commonly known as 1705 132nd Avenue, Bellevue, King County, Washington ("Parcel A").
- B. O.B. Bellevue Properties, LLC, a Washington limited liability company ("OB"), as successor in interest to OB Bellevue Properties II, LLC, owns that certain real property immediately adjacent to Parcel A, commonly known as 1625 132nd Avenue NE, Bellevue, Washington ("Parcel B"). Parcel A and Parcel B are legally described on Exhibit A attached hereto.
- C. NMW is the previous owner of Parcel B. NMW conveyed Parcel B to OB on or about April 1, 2003 under that certain Special Warranty Deed recorded on April 1, 2003 as Auditor's File No. 20030401002879, King County, Washington.
- D. Parcel A and Parcel B are encumbered by that certain Restrictive Covenant, dated September 25, 1996 and recorded under Auditor's File No. 9609271199, King County, Washington (the "Restrictive Covenant"). The Restrictive Covenant sets forth certain use restrictions for property identified as "the press building of the Journal American Newspaper property" as a result of soil contamination. The map attached to the Restrictive Covenant indicates that the contaminated soil is located on Parcel B only. The map does not indicate any contamination on Parcel A.
- E. NMW and OB requested a letter from the Washington State Department of Ecology ("DOE") consenting to the release of the Restrictive Covenant from Parcel A. DOE provided NMW and OB with a letter dated April 26, 2005 (the "Consent") that acknowledges that the Restrictive Covenant was erroneously recorded against Parcel A and consenting to the release of Parcel A from the Restrictive Covenant. A copy of the Consent is attached hereto as Exhibit B.

RELEASE

- 1. NMW and OB hereby release the Restrictive Covenant on Parcel A.
- 2. OB acknowledges and agrees that the Restrictive Covenant still encumbers Parcel B and remains in full force and effect, unmodified and unchanged by this Release of Restrictive Covenant.
- 3. This instrument may be executed in any number of counterparts, each of which, when executed and delivered, will be deemed to be an original, and all of which taken together will be deemed to be but one and the same instrument.

RESTRICTIVE COVENANT

Notice is hereby given that the property described on Exhibit "A" attached hereto and known as, the press building of The Journal American newspaper property, located at 1705 132nd Avenue, Bellevue, Washington, 98005, has been the subject of an Independent Remedial Action conducted under Wash. Rev. Code Section 70.105D (1993). Certain of the on-site soils are contaminated with petroleum hydrocarbons and are capped by the press building and its parking lot area, as depicted by Figures 6 through 9 of the INDEPENDENT REMEDIAL ACTION REPORT: The Journal American Facility, Bellevue, Washington (the "Report"), prepared by CH2M HILL, dated August 1995 and submitted to the Washington Department of Ecology's (WDOE), Northwest Region, Bellevue Washington. At the time of the Report, the maximum residual soil concentration of total petroleum hydrocarbon (TPH) gasoline was 1,200 milligrams per kilogram (mg/kg) at boring locations B04 at the 10 foot depth and B10 at the 7.5 foot depth and the maximum residual concentration of TPH diesel was 12,000 mg/kg at B04 at the 10 foot depth. These maximum soils concentrations exceed the Washington State Models Toxics Control Act (MTCA) Level A cleanup standards of 100 mg/kg gasoline in soil and 200 mg/kg diesel in soil. Until such time as this covenant is removed according to its terms, use of this property is restricted in accordance with Wash. Admin. Code (WAC) 173-340-440, which is incorporated here by reference, as follows:

- a) No activities may be conducted at the property that may interfere with the groundwater monitoring and the continued protection of the Independent Remedial Action;
- b) No activities may be conducted that may result in the release of the petroleum hydrocarbon contamination capped by the press building, loading dock and asphalt paving identified as capping the petroleum hydrocarbon contamination in Figures 6 through 9 above;
- c) Water well(s) shall not be installed on the property for purpose of domestic water use;
- d) Written notification must be given to the WDOE or its successor agency before excavating, moving or removing the soils or material beneath the press building, loading dock, and asphalt paving which are capped by these structures. In the event the cement flooring and foundation of the press building or the loading dock are demolished, all TPH contaminated soils above applicable WAC 173-340-700 through 173-340-760 cleanup standards shall be removed and disposed of in accordance with applicable law or, in the alternative, appropriate sampling and testing shall be completed that documents that the remaining TPH contaminated soils are below applicable cleanup criteria. A report documenting

9609271199

1995-1199 01:18:00 PM KING COUNTY RECORDS 005 SH 12:00

these facts shall be submitted to WDOE or its successor agency for review and approval.

- 9609271199
- e) Written notification must be given to WDOE or its successor agency before removal or destruction of those areas of the existing press building, loading dock, or asphalt paving identified as capping the petroleum hydrocarbon contamination in Exhibit "B";
 - f) Written notification must be given to the WDOE or its successor agency of owner's intent to convey any interest in the property. Further, no conveyance of title, easement, lease, or other interest in the property will be consummated by the owner of the property without notice of this Restrictive Covenant;
 - g) The owner must notify WDOE or its successor agency, prior to any use of the property that is inconsistent with the terms of this Restrictive Covenant.
 - h) The WDOE or successor agency or its designated representative shall have the right to enter the property after 24-hour prior notice, at reasonable times for the purpose of evaluating compliance with the terms of this Restrictive Covenant, to take samples and to inspect records related to the Independent Remedial Action;
 - i) Upon remediation (by removal or otherwise) of the petroleum contaminated soil to below those levels set forth in Wash. Admin. Code 173-340-700 through 173-340-760, the owner may record an instrument stating that this restrictive covenant is of no further force or effect, provided the owner has the consent of the WDOE or its successor agency to so do.

IN WITNESS WHEREOF, the undersigned has executed this instrument as of the 25 day of September, 1996.

Re: Analytical Data for Project 40300-E340-EL299
Laboratory Reference No. 1901-085

Dear Glenn:

Enclosed are the analytical results and associated quality control data for samples submitted on January 10, 2019.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal stroke extending to the right.

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: January 11, 2019
Samples Submitted: January 10, 2019
Laboratory Reference: 1901-085
Project: 40300-E340-EL299

Case Narrative

Samples were collected on January 10, 2019 and received by the laboratory on January 10, 2019. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
 - B - The analyte indicated was also found in the blank sample.
 - C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
 - E - The value reported exceeds the quantitation range and is an estimate.
 - F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
 - H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
 - I - Compound recovery is outside of the control limits.
 - J - The value reported was below the practical quantitation limit. The value is an estimate.
 - K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
 - L - The RPD is outside of the control limits.
 - M - Hydrocarbons in the gasoline range are impacting the diesel range result.
 - M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
 - N - Hydrocarbons in the lube oil range are impacting the diesel range result.
 - N1 - Hydrocarbons in diesel range are impacting lube oil range results.
 - O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
 - P - The RPD of the detected concentrations between the two columns is greater than 40.
 - Q - Surrogate recovery is outside of the control limits.
 - S - Surrogate recovery data is not available due to the necessary dilution of the sample.
 - T - The sample chromatogram is not similar to a typical _____.
 - U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
 - U1 - The practical quantitation limit is elevated due to interferences present in the sample.
 - V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
 - W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
 - X - Sample extract treated with a mercury cleanup procedure.
 - X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
 - Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Re: Analytical Data for Project 40300-E340-EL299
Laboratory Reference No. 1901-142

Dear Glenn:

Enclosed are the analytical results and associated quality control data for samples submitted on January 17, 2019.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal stroke extending to the right.

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: January 18, 2019
Samples Submitted: January 17, 2019
Laboratory Reference: 1901-142
Project: 40300-E340-EL299

Case Narrative

Samples were collected on January 17, 2019 and received by the laboratory on January 17, 2019. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Enclosed are the analytical results and associated quality control data for samples submitted on January 18, 2019.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal stroke extending to the right.

David Baumeister
Project Manager

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: January 21, 2019
Samples Submitted: January 18, 2019
Laboratory Reference: 1901-154
Project: 40300-E340-EL299

Case Narrative

Samples were collected on January 18, 2019 and received by the laboratory on January 18, 2019. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
 - B - The analyte indicated was also found in the blank sample.
 - C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
 - E - The value reported exceeds the quantitation range and is an estimate.
 - F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
 - H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
 - I - Compound recovery is outside of the control limits.
 - J - The value reported was below the practical quantitation limit. The value is an estimate.
 - K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
 - L - The RPD is outside of the control limits.
 - M - Hydrocarbons in the gasoline range are impacting the diesel range result.
 - M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
 - N - Hydrocarbons in the lube oil range are impacting the diesel range result.
 - N1 - Hydrocarbons in diesel range are impacting lube oil range results.
 - O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
 - P - The RPD of the detected concentrations between the two columns is greater than 40.
 - Q - Surrogate recovery is outside of the control limits.
 - S - Surrogate recovery data is not available due to the necessary dilution of the sample.
 - T - The sample chromatogram is not similar to a typical _____.
 - U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
 - U1 - The practical quantitation limit is elevated due to interferences present in the sample.
 - V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
 - W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
 - X - Sample extract treated with a mercury cleanup procedure.
 - X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
 - Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
 - Z -
- ND - Not Detected at PQL
 PQL - Practical Quantitation Limit
 RPD - Relative Percent Difference

 - P - The RPD of the detected concentrations between the two columns is greater than 40.
 - Q - Surrogate recovery is outside of the control limits.
 - S - Surrogate recovery data is not available due to the necessary dilution of the sample.
 - T - The sample chromatogram is not similar to a typical _____.
 - U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
 - U1 - The practical quantitation limit is elevated due to interferences present in the sample.
 - V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
 - W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
 - X - Sample extract treated with a mercury cleanup procedure.
 - X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
 - Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
 - Z -
- ND - Not Detected at PQL
 PQL - Practical Quantitation Limit
 RPD - Relative Percent Difference

Re: Analytical Data for Project 40300-E340.03b
Laboratory Reference No. 1901-168

Dear Glenn:

Enclosed are the analytical results and associated quality control data for samples submitted on January 22, 2019.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal flourish extending to the right.

David Baumeister
Project Manager

Enclosures

OnSite Environmental, Inc. 14648 NE 95th Street, Redmond, WA 98052 (425) 883-3881

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: January 23, 2019
Samples Submitted: January 22, 2019
Laboratory Reference: 1901-168
Project: 40300-E340.03b

Case Narrative

Samples were collected on January 22, 2019 and received by the laboratory on January 22, 2019. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
 - B - The analyte indicated was also found in the blank sample.
 - C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
 - E - The value reported exceeds the quantitation range and is an estimate.
 - F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
 - H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
 - I - Compound recovery is outside of the control limits.
 - J - The value reported was below the practical quantitation limit. The value is an estimate.
 - K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
 - L - The RPD is outside of the control limits.
 - M - Hydrocarbons in the gasoline range are impacting the diesel range result.
 - M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
 - N - Hydrocarbons in the lube oil range are impacting the diesel range result.
 - N1 - Hydrocarbons in diesel range are impacting lube oil range results.
 - O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
 - P - The RPD of the detected concentrations between the two columns is greater than 40.
 - Q - Surrogate recovery is outside of the control limits.
 - S - Surrogate recovery data is not available due to the necessary dilution of the sample.
 - T - The sample chromatogram is not similar to a typical _____.
 - U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
 - U1 - The practical quantitation limit is elevated due to interferences present in the sample.
 - V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
 - W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
 - X - Sample extract treated with a mercury cleanup procedure.
 - X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
 - Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
 - B - The analyte indicated was also found in the blank sample.
 - C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
 - E - The value reported exceeds the quantitation range and is an estimate.
 - F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
 - H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
 - I - Compound recovery is outside of the control limits.
 - J - The value reported was below the practical quantitation limit. The value is an estimate.
 - K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
 - L - The RPD is outside of the control limits.
 - M - Hydrocarbons in the gasoline range are impacting the diesel range result.
 - M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
 - N - Hydrocarbons in the lube oil range are impacting the diesel range result.
 - N1 - Hydrocarbons in diesel range are impacting lube oil range results.
 - O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
 - P - The RPD of the detected concentrations between the two columns is greater than 40.
 - Q - Surrogate recovery is outside of the control limits.
 - S - Surrogate recovery data is not available due to the necessary dilution of the sample.
 - T - The sample chromatogram is not similar to a typical _____.
 - U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
 - U1 - The practical quantitation limit is elevated due to interferences present in the sample.
 - V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
 - W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
 - X - Sample extract treated with a mercury cleanup procedure.
 - X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
 - Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
 - Z -
- ND - Not Detected at PQL
 PQL - Practical Quantitation Limit
 RPD - Relative Percent Difference

Re: Analytical Data for Project 40300.E340.03b
Laboratory Reference No. 1902-078

Dear Glenn:

Enclosed are the analytical results and associated quality control data for samples submitted on February 14, 2019.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "DB", with a long horizontal flourish extending to the right.

David Baumeister

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: February 15, 2019
Samples Submitted: February 14, 2019
Laboratory Reference: 1902-078
Project: 40300.E340.03b

Case Narrative

Samples were collected on February 14, 2019 and received by the laboratory on February 14, 2019. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

- A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.
 - B - The analyte indicated was also found in the blank sample.
 - C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.
 - E - The value reported exceeds the quantitation range and is an estimate.
 - F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.
 - H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.
 - I - Compound recovery is outside of the control limits.
 - J - The value reported was below the practical quantitation limit. The value is an estimate.
 - K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.
 - L - The RPD is outside of the control limits.
 - M - Hydrocarbons in the gasoline range are impacting the diesel range result.
 - M1 - Hydrocarbons in the gasoline range (toluene-naphthalene) are present in the sample.
 - N - Hydrocarbons in the lube oil range are impacting the diesel range result.
 - N1 - Hydrocarbons in diesel range are impacting lube oil range results.
 - O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.
 - P - The RPD of the detected concentrations between the two columns is greater than 40.
 - Q - Surrogate recovery is outside of the control limits.
 - S - Surrogate recovery data is not available due to the necessary dilution of the sample.
 - T - The sample chromatogram is not similar to a typical _____.
 - U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
 - U1 - The practical quantitation limit is elevated due to interferences present in the sample.
 - V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.
 - W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.
 - X - Sample extract treated with a mercury cleanup procedure.
 - X1 - Sample extract treated with a sulfuric acid/silica gel cleanup procedure.
 - Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.
 - Z -
- ND - Not Detected at PQL
 PQL - Practical Quantitation Limit
 RPD - Relative Percent Difference

RE: E340

Work Order Number: 1901256

January 22, 2019

Attention Eric Laumbattus:

Fremont Analytical, Inc. received 3 sample(s) on 1/18/2019 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Gasoline by NWTPH-Gx

Sample Moisture (Percent Moisture)

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Mike C. Ridgeway", written in a cursive style.

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Client Name: **ONEILL**

 Work Order Number: **1901256**

 Logged by: **Brianna Barnes**

 Date Received: **1/18/2019 5:05:00 PM**

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Required
6. Was an attempt made to cool the samples? Yes No NA
- Received straight from field.**
7. Were all items received at a temperature of >0°C to 10.0°C* Yes No NA
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
- MeOH VOAs extracted.
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

RE: E340-EL299

Work Order Number: 1901298

January 24, 2019

Attention Scott Darst:

Fremont Analytical, Inc. received 10 sample(s) on 1/23/2019 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Gasoline by NWTPH-Gx

Sample Moisture (Percent Moisture)

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Mike C. Ridgeway", written in a cursive style.

Mike Ridgeway
Laboratory Director

CLIENT: O'Neill Service Group

Project: E340-EL299

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Required
6. Was an attempt made to cool the samples? Yes No NA
7. Were all items received at a temperature of >0°C to 10.0°C * Yes No NA
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

RE: (KLB EL299)

Work Order Number: 1901385

February 04, 2019

Attention Scott Darst:

Fremont Analytical, Inc. received 6 sample(s) on 1/30/2019 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Gasoline by NWTPH-Gx

Sample Moisture (Percent Moisture)

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Mike C. Ridgeway", written in a cursive style.

Mike Ridgeway
Laboratory Director

Project: (KLB EL299)

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Required
6. Was an attempt made to cool the samples? Yes No NA
7. Were all items received at a temperature of >0°C to 10.0°C * Yes No NA
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

RE: EL299 KLB
Work Order Number: 1902238

February 22, 2019

Attention Eric Laumbattus:

Fremont Analytical, Inc. received 4 sample(s) on 2/20/2019 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.
Gasoline by NWTPH-Gx
Sample Moisture (Percent Moisture)

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Mike C. Ridgeway", written in a cursive style.

Project: EL299 KLB

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Required
6. Was an attempt made to cool the samples? Yes No NA
7. Were all items received at a temperature of >0°C to 10.0°C * Yes No NA
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

APPENDIX E
Department of Ecology No Further Action Letter

STATE OF WASHINGTON
DEPARTMENT OF ECOLOGY

Northwest Regional Office, 3190 - 160th Ave S.E. • Bellevue, Washington 98008-5452 • (206) 649-7000

October 7, 1996

Mr. Paul deVille, President
Persis Corporation
P.O. Box 3110
Honolulu, HI 96820

Dear Mr. deVille:

Re: The Journal American Site
1705 - 132nd Avenue NE, Bellevue, WA 98005

Thank you for submitting the results of your independent remedial action for Department of Ecology (Ecology) review. Ecology appreciates your initiative in pursuing this administrative option under the Model Toxics Control Act (MTCA), Ch. 70.105D RCW.

Ecology's Toxics Cleanup Program has reviewed the following documents prepared by CH2M HILL for The Journal American Site, 1705 - 132nd Avenue NE, Bellevue, Washington:

1. Independent Remedial Action Report, dated August 1995.
2. August 1995 Groundwater Sampling, dated September 21, 1995.
3. Summary of Fourth Quarter 1995 Groundwater Sampling and Asphalt Cap Installation, dated January 24, 1996.
4. Summary of First Quarter 1996 Groundwater Sampling, dated May 17, 1996.
5. Summary of Second Quarter 1996 and Short Term Performance Monitoring Sampling, dated May 31, 1996.
6. Summary of Third (Final) Quarter 1996 Groundwater Sampling, dated September 20, 1996.

The above-named reports were prepared without Ecology oversight such as would occur under an Agreed Order or Consent Decree. However, based upon the information summarized in these reports, Ecology has determined that, at this time, the release of total petroleum hydrocarbons (TPH) and benzene/ethylbenzene/toluene/xylene (BETX) into the soil and groundwater at the site no longer poses a threat to human health or the environment. Therefore, Ecology has determined that no further action is necessary at this site with regard to the release of TPH and BETX to the soil and groundwater.

Mr. Paul deVille, President
Page 2
October 7, 1996

Please be aware that because your actions were not conducted under a consent decree with Ecology, this no further action letter is not a settlement by the state under RCW 70.105D.040(4). Moreover, this determination is made only with respect to the release of TPH and BETX to the soil and groundwater at the 1705 - 132nd Avenue NE property as identified in the above-listed documents. It does not apply to any other release or potential release at the property, any other areas on the property, nor any other properties held by the Persis Corporation, Parkland Management, or The Journal American.

Ecology does not assume any liability for any release, threatened release or other conditions at the site, or for any actions taken or omitted by any person or his/her agents or employees with regard to the release, threatened release, or other conditions at the site. Ecology reserves the right to require further action at the site with regard to the soil, groundwater or other contaminated media if new or different information other than that presented in the above reports becomes known or available.

Ecology will update its Leaking Underground Storage Tank (LUST) database to reflect this no further action determination. Your site will not appear in future publications of the LUST database.

Please contact me at (206) 649-7042 if you have any questions.

Sincerely,

Elaine P. Atkinson
Environmental Scientist

2021 Bellevue Excavation

CONSTRUCTION FIELD MEMO

Project Name:	130th Ave NE Station Area Park and Ride	Date:	8/27/2021
Contractor:	Active Construction Inc	Contract No:	PW-R-181
Owner:	City of Bellevue		
Subject:	Contaminated Soil Results 8/26/2021		

Message

As a follow-up to Field Memo 01, the analysis of the contaminated soils has been received and is attached to this field memo. Active construction is directed to select a licensed disposal facility and make arrangements to dispose of all contaminated materials within the limits specified in Field Memo 01.

The material is likely is only suitable for disposal at a municipal solid waste landfill such as the ones owned and operated by Republic Service or Waste Management. There is a chance the soil associated with sample "130th Park and Ride Grade" could be suitable for disposal at an inert waste landfill such as AAA Rock in Monroe, WA, or with CADMAN at their soil burner in Everett. The analytical results would need to be submitted to them for approval and acceptance.

Please continue to track all of your costs related to these contaminated materials under the Force Account bid item 18, Hazardous Material Handling and Disposal.

Gregory Thiemens

Contaminated soil (petroleum) found while excavating for construction entrance. Soil sampled and tested in this location

Soil removed to the limit required for the new improvements. Area covered with geotextile and capped with compacted native material.

Soil stockpiled on plastic sheeting and covered with plastic sheeting. Soil hauled to Waste Management after profile was generated from lab results.

RE: HDR 130th

Work Order Number: 2108275

August 26, 2021

Attention Scott Darst:

Fremont Analytical, Inc. received 3 sample(s) on 8/19/2021 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Gasoline by NWTPH-Gx

Sample Moisture (Percent Moisture)

Total Metals by EPA Method 6020B

Volatile Organic Compounds by EPA Method 8260D

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Brianna Barnes
Project Manager

Work Order Sample Summary

Lab Sample ID	Client Sample ID	Date/Time Collected	Date/Time Received
2108275-001	130th Park and Ride grade	08/19/2021 11:00 AM	08/19/2021 12:43 PM
2108275-002	130th Park and Ride stockpile	08/19/2021 11:00 AM	08/19/2021 12:43 PM
2108275-003	130th Park and Ride subgrade	08/19/2021 11:00 AM	08/19/2021 12:43 PM

Note: If no "Time Collected" is supplied, a default of 12:00AM is assigned

CLIENT: O'Neill Service Group

Project: HDR 130th

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- DUP - Sample Duplicate
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MCL - Maximum Contaminant Level
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- REP - Sample Replicate
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Present
6. Was an attempt made to cool the samples? Yes No NA
7. Were all items received at a temperature of >2°C to 6°C * Yes No NA
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

Non-Hazardous WAM Approval

Requested Management Facility: Columbia Ridge Landfill, Alaska Street Transfer Station, Duwamish Reload Facility

Profile Number: 116404WA Waste Acceptance Expiration Date: 09/15/2024
Common Name: LF02 Diesel Fuel Impacted Soil & Debris... WM Regulatory Volume Limit: _____ NA

APPROVAL DETAILS

Approval Decision: Approved Not Approved Profile Renewal: Yes No

Management Method: Alternate Daily Cover (ADC)

Generator Name: City of Bellevue

Profile Expiration Date: 09/15/2024

Periodic Testing Due Date: _____ NA

Other Due Date: _____ NA (Specify) _____

Management Facility Precautions, Special Handling Procedures or Limitation on approval:

Generator Conditions

- Shall not contain free liquids.
- Shipment must be scheduled into the disposal facility at least 24 hours in advance. Contact information will be provided by your TSR.
- Waste manifest or applicable shipping document must accompany load.
- The waste profile number must appear on the shipping papers.

Approved via Alaska Street Transfer Station (70 S. Alaska Street, Seattle WA) to Columbia Ridge for final disposition.

YOU MAY NOT HAUL TO DUWAMISH W/OUT PRIOR SCHEDULING. Please contact Kim Funk at 206-694-0600 to schedule your load with the landfill 24 hours in advance. A copy of the WAM Approval Form must be presented with each load to the landfill scale house attendant upon arrival.

Facility Conditions

- Approved via transfer station

Appendix I

Terrestrial Ecological Evaluation

Voluntary Cleanup Program

Washington State Department of Ecology Toxics Cleanup Program

TERRESTRIAL ECOLOGICAL EVALUATION FORM

Under the Model Toxics Control Act (MTCA), a terrestrial ecological evaluation is necessary if hazardous substances are released into the soils at a Site. In the event of such a release, you must take one of the following three actions as part of your investigation and cleanup of the Site:

1. Document an exclusion from further evaluation using the criteria in WAC 173-340-7491.
2. Conduct a simplified evaluation as set forth in WAC 173-340-7492.
3. Conduct a site-specific evaluation as set forth in WAC 173-340-7493.

When requesting a written opinion under the Voluntary Cleanup Program (VCP), you must complete this form and submit it to the Department of Ecology (Ecology). The form documents the type and results of your evaluation.

Completion of this form is not sufficient to document your evaluation. You still need to document your analysis and the basis for your conclusion in your cleanup plan or report.

If you have questions about how to conduct a terrestrial ecological evaluation, please contact the Ecology site manager assigned to your Site. For additional guidance, please refer to <https://ecology.wa.gov/Regulations-Permits/Guidance-technical-assistance/Terrestrial-ecological-evaluation>.

Step 1: IDENTIFY HAZARDOUS WASTE SITE

Please identify below the hazardous waste site for which you are documenting an evaluation.

Facility/Site Name: City of Bellevue/BelRed

Facility/Site Address: 1705 132nd NE, Bellevue, Washington

Facility/Site No: 2558

VCP Project No.: 5149

Step 2: IDENTIFY EVALUATOR

Please identify below the person who conducted the evaluation and their contact information.

Name: Sally Nguyen

Title: Hydrogeologist I

Organization: Parametrix

Mailing address: 719 2nd Ave #200

City: Seattle

State: WA

Zip code: 98104

Phone:

Fax:

E-mail: snguyen@parametrix.com

Step 3: DOCUMENT EVALUATION TYPE AND RESULTS

A. Exclusion from further evaluation.

1. Does the Site qualify for an exclusion from further evaluation?

- Yes *If you answered "YES," then answer **Question 2**.*
- No or Unknown *If you answered "NO" or "UNKNOWN," then skip to **Step 3B** of this form.*

2. What is the basis for the exclusion? Check all that apply. Then skip to **Step 4 of this form.**

Point of Compliance: WAC 173-340-7491(1)(a)

- All soil contamination is, or will be,* at least 15 feet below the surface.
- All soil contamination is, or will be,* at least 6 feet below the surface (or alternative depth if approved by Ecology), and institutional controls are used to manage remaining contamination.

Barriers to Exposure: WAC 173-340-7491(1)(b)

- All contaminated soil, is or will be,* covered by physical barriers (such as buildings or paved roads) that prevent exposure to plants and wildlife, and institutional controls are used to manage remaining contamination.

Undeveloped Land: WAC 173-340-7491(1)(c)

- There is less than 0.25 acres of contiguous# undeveloped± land on or within 500 feet of any area of the Site and any of the following chemicals is present: chlorinated dioxins or furans, PCB mixtures, DDT, DDE, DDD, aldrin, chlordane, dieldrin, endosulfan, endrin, heptachlor, heptachlor epoxide, benzene hexachloride, toxaphene, hexachlorobenzene, pentachlorophenol, or pentachlorobenzene.
- For sites not containing any of the chemicals mentioned above, there is less than 1.5 acres of contiguous# undeveloped± land on or within 500 feet of any area of the Site.

Background Concentrations: WAC 173-340-7491(1)(d)

- Concentrations of hazardous substances in soil do not exceed natural background levels as described in WAC 173-340-200 and 173-340-709.

* An exclusion based on future land use must have a completion date for future development that is acceptable to Ecology.

± "Undeveloped land" is land that is not covered by building, roads, paved areas, or other barriers that would prevent wildlife from feeding on plants, earthworms, insects, or other food in or on the soil.

"Contiguous" undeveloped land is an area of undeveloped land that is not divided into smaller areas of highways, extensive paving, or similar structures that are likely to reduce the potential use of the overall area by wildlife.

B. Simplified evaluation.

1. Does the Site qualify for a simplified evaluation?

- Yes *If you answered "YES," then answer **Question 2** below.*
- No or Unknown *If you answered "NO" or "UNKNOWN," then skip to **Step 3C** of this form.*

2. Did you conduct a simplified evaluation?

- Yes *If you answered "YES," then answer **Question 3** below.*
- No *If you answered "NO," then skip to **Step 3C** of this form.*

3. Was further evaluation necessary?

- Yes *If you answered "YES," then answer **Question 4** below.*
- No *If you answered "NO," then answer **Question 5** below.*

4. If further evaluation was necessary, what did you do?

- Used the concentrations listed in Table 749-2 as cleanup levels. *If so, then skip to **Step 4** of this form.*
- Conducted a site-specific evaluation. *If so, then skip to **Step 3C** of this form.*

5. If no further evaluation was necessary, what was the reason? Check all that apply. Then skip to **Step 4 of this form.**

Exposure Analysis: WAC 173-340-7492(2)(a)

- Area of soil contamination at the Site is not more than 350 square feet.
- Current or planned land use makes wildlife exposure unlikely. Used Table 749-1.

Pathway Analysis: WAC 173-340-7492(2)(b)

- No potential exposure pathways from soil contamination to ecological receptors.

Contaminant Analysis: WAC 173-340-7492(2)(c)

- No contaminant listed in Table 749-2 is, or will be, present in the upper 15 feet at concentrations that exceed the values listed in Table 749-2.
- No contaminant listed in Table 749-2 is, or will be, present in the upper 6 feet (or alternative depth if approved by Ecology) at concentrations that exceed the values listed in Table 749-2, and institutional controls are used to manage remaining contamination.
- No contaminant listed in Table 749-2 is, or will be, present in the upper 15 feet at concentrations likely to be toxic or have the potential to bioaccumulate as determined using Ecology-approved bioassays.
- No contaminant listed in Table 749-2 is, or will be, present in the upper 6 feet (or alternative depth if approved by Ecology) at concentrations likely to be toxic or have the potential to bioaccumulate as determined using Ecology-approved bioassays, and institutional controls are used to manage remaining contamination.

C. Site-specific evaluation. A site-specific evaluation process consists of two parts: (1) formulating the problem, and (2) selecting the methods for addressing the identified problem. Both steps require consultation with and approval by Ecology. See WAC 173-340-7493(1)(c).

1. Was there a problem? See WAC 173-340-7493(2).

- Yes *If you answered “YES,” then answer **Question 2** below.*
- No *If you answered “NO,” then identify the reason here and then skip to **Question 5** below:*
- No issues were identified during the problem formulation step.
 - While issues were identified, those issues were addressed by the cleanup actions for protecting human health.

2. What did you do to resolve the problem? See WAC 173-340-7493(3).

- Used the concentrations listed in Table 749-3 as cleanup levels. *If so, then skip to **Question 5** below.*
- Used one or more of the methods listed in WAC 173-340-7493(3) to evaluate and address the identified problem. *If so, then answer **Questions 3 and 4** below.*

3. If you conducted further site-specific evaluations, what methods did you use?

Check all that apply. See WAC 173-340-7493(3).

- Literature surveys.
- Soil bioassays.
- Wildlife exposure model.
- Biomarkers.
- Site-specific field studies.
- Weight of evidence.
- Other methods approved by Ecology. If so, please specify:

4. What was the result of those evaluations?

- Confirmed there was no problem.
- Confirmed there was a problem and established site-specific cleanup levels.

5. Have you already obtained Ecology’s approval of both your problem formulation and problem resolution steps?

- Yes If so, please identify the Ecology staff who approved those steps:
- No

Step 4: SUBMITTAL

Please mail your completed form to the Ecology site manager assigned to your Site. If a site manager has not yet been assigned, please mail your completed form to the Ecology regional office for the County in which your Site is located.

Northwest Region: Attn: VCP Coordinator 3190 160 th Ave. SE Bellevue, WA 98008-5452	Central Region: Attn: VCP Coordinator 1250 West Alder St. Union Gap, WA 98903-0009
Southwest Region: Attn: VCP Coordinator P.O. Box 47775 Olympia, WA 98504-7775	Eastern Region: Attn: VCP Coordinator N. 4601 Monroe Spokane WA 99205-1295

If you need this publication in an alternate format, please call the Toxics Cleanup Program at 360-407-7170. People with hearing loss can call 711 for Washington Relay Service. People with a speech disability can call 877-833-6341.

**Table 749-1
Simplified Terrestrial Ecological
Evaluation - Exposure Analysis Procedure
under WAC 173-340-7492 (2)(a)(ii).^a**

<p>Estimate the area of contiguous (connected) undeveloped land on the site or within 500 feet of any area of the site to the nearest 1/2 acre (1/4 acre if the area is less than 0.5 acre). "Undeveloped land" means land that is not covered by existing buildings, roads, paved areas or other barriers that will prevent wildlife from feeding on plants, earthworms, insects or other food in or on the soil.</p>																					
<p>1) From the table below, find the number of points corresponding to the area and enter this number in the box to the right.</p>																					
<table border="1"> <thead> <tr> <th>Area (acres)</th> <th>Points</th> </tr> </thead> <tbody> <tr><td>0.25 or less</td><td>4</td></tr> <tr><td>0.5</td><td>5</td></tr> <tr><td>1.0</td><td>6</td></tr> <tr><td>1.5</td><td>7</td></tr> <tr><td>2.0</td><td>8</td></tr> <tr><td>2.5</td><td>9</td></tr> <tr><td>3.0</td><td>10</td></tr> <tr><td>3.5</td><td>11</td></tr> <tr><td>4.0 or more</td><td>12</td></tr> </tbody> </table>	Area (acres)	Points	0.25 or less	4	0.5	5	1.0	6	1.5	7	2.0	8	2.5	9	3.0	10	3.5	11	4.0 or more	12	6
Area (acres)	Points																				
0.25 or less	4																				
0.5	5																				
1.0	6																				
1.5	7																				
2.0	8																				
2.5	9																				
3.0	10																				
3.5	11																				
4.0 or more	12																				
<p>2) Is this an industrial or commercial property? See WAC 173-340-7490 (3)(c). If yes, enter a score of 3 in the box to the right. If no, enter a score of 1.</p>		1																			
<p>3) Enter a score in the box to the right for the habitat quality of the site, using the rating system shown below^b. (High = 1, Intermediate = 2, Low = 3)</p>		2																			
<p>4) Is the undeveloped land likely to attract wildlife? If yes, enter a score of 1 in the box to the right. If no, enter a score of 2. See footnote c.</p>		1																			
<p>5) Are there any of the following soil contaminants present: Chlorinated dibenzo-p-dioxins/dibenzofurans, PCB mixtures, DDT, DDE, DDD, aldrin, chlordane, dieldrin, endosulfan, endrin, heptachlor, benzene hexachloride, toxaphene, hexachlorobenzene, pentachlorophenol, pentachlorobenzene? If yes, enter a score of 1 in the box to the right. If no, enter a score of 4.</p>		4																			
<p>6) Add the numbers in the boxes on lines 2 through 5 and enter this number in the box to the right. If this number is larger than the number in the box on line 1, the simplified terrestrial ecological evaluation may be ended under WAC 173-340-7492 (2)(a)(ii).</p>		8
