

Progress Report & Next Steps

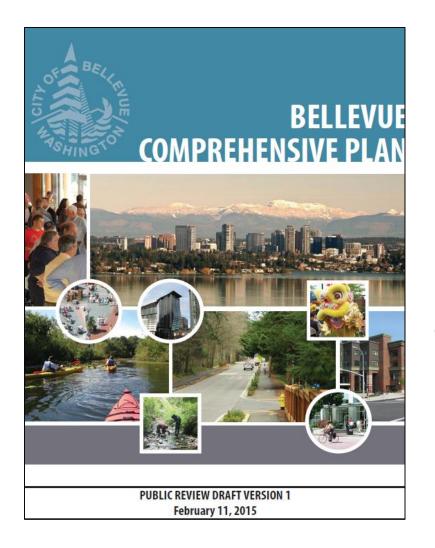

Transportation Commission October 13, 2016

Today's Agenda:

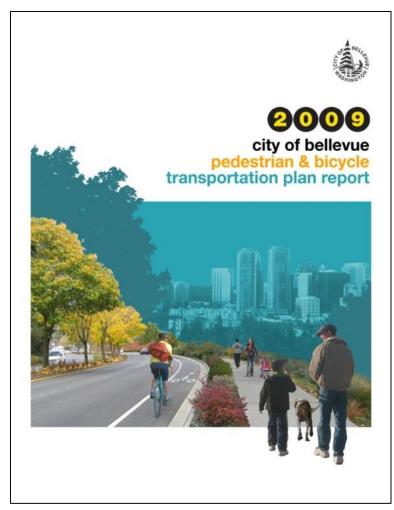

- 1) Program Overview
- 2) Status Report
- 3) Next Steps

"Building and maintaining a seamless network of walkways, bikeways, and off-street trails requires a coordinated effort that is documented in the **Pedestrian and Bicycle Transportation Plan and the Pedestrian and Bicycle** Implementation Initiative."

- Transportation Element

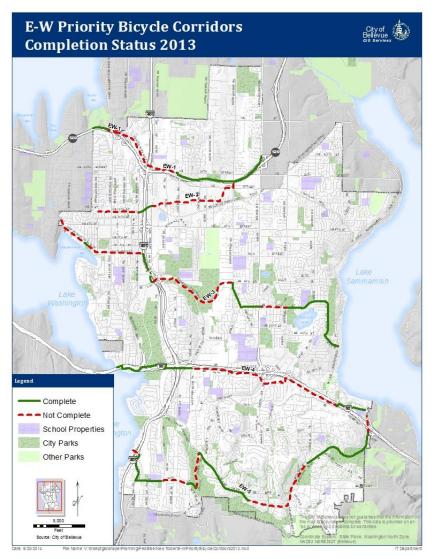

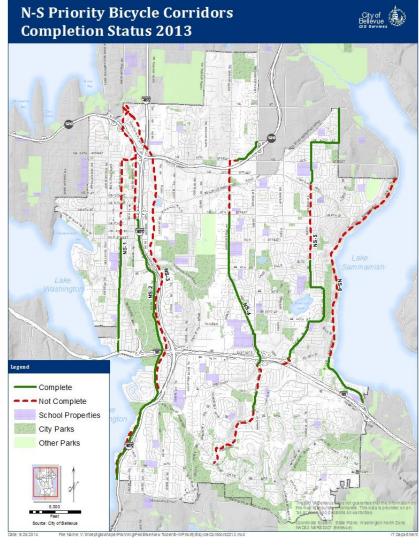

Ordinance No. 5861 (2/17/2009)

- Formulated vision, goals, objectives.
- Assessed gaps in the non-motorized network.
- Established performance targets.

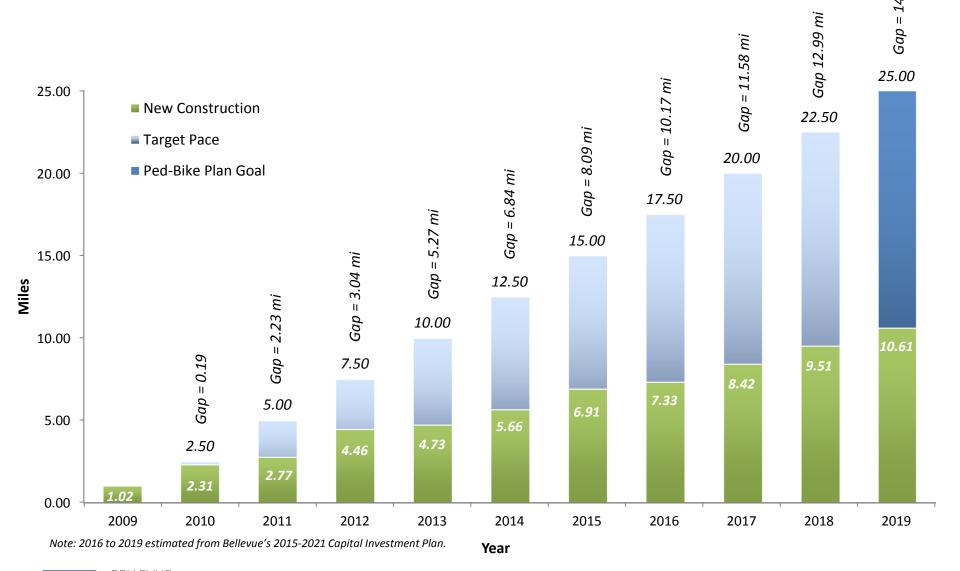

Arterial Sidewalk Construction - Cumulative

Pedestrian Network

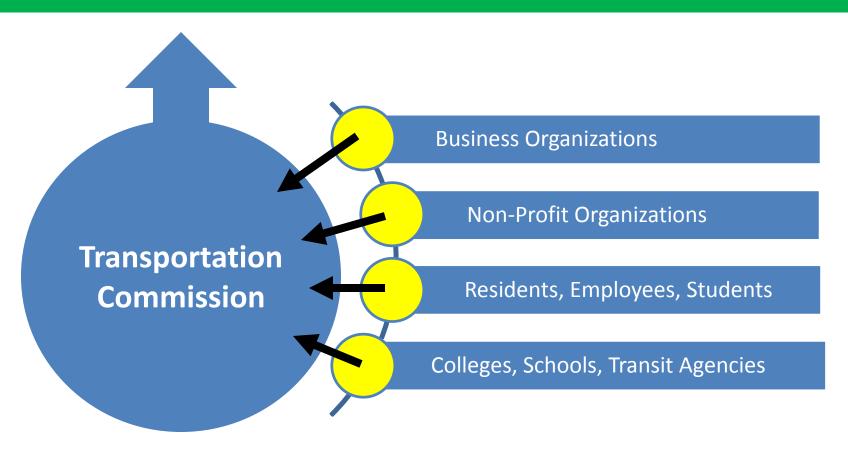

Council support for a unified and recognizable strategy that:

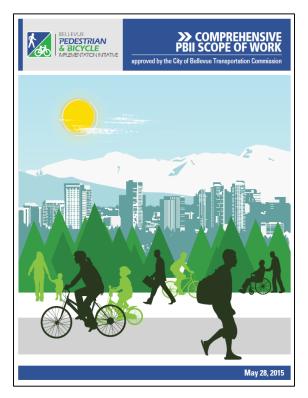

- Links planning with implementation
- Promotes coordinated solutions (5Es)
- Advances a "Complete Streets" philosophy
- Considers creative & affordable strategies
- Leverages best practices and innovative tools
- Investigates "Vision Zero" techniques
- Advances demonstration projects
- Identifies early-win opportunities
- Balances the needs of various roadway users
- Maximizes construction efficiencies
- Promotes physically separated facilities
- Prioritizes "filling the gaps"
- Engages stakeholders early

Bellevue City Council

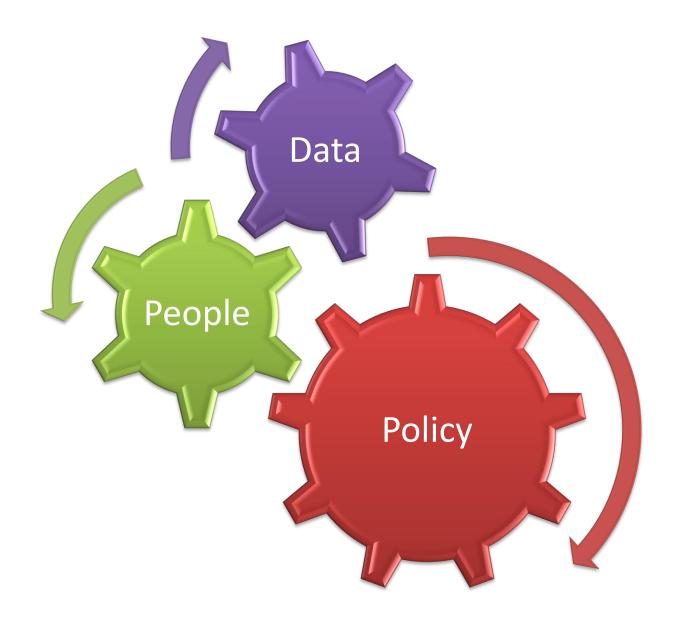

- 1. Ped-Bike Safety Assessment Report
- 2. Bicycle Priority Corridor Design Report
- 3. Transit Master Plan Integration Report
- 4. Implementation/Funding Strategy Report
- 5. Count Technology Report
- 6. Bike-Share Implementation Report
- 7. Performance Management Report

MAYORS' CHALLENGE

Winner! Bellevue, Washington

Bellevue, WA, pursued a range of data collection activities during the Mayors' Challenge to identify barriers to bicycling and walking, prioritize improvements, and guide investments. In February 2015, the Bellevue City Council introduced the Pedestrian and Bicycle Implementation Initiative (PBII) to improve safety for people of all ages and abilities who walk and bike in Bellevue. Using data collected from online sources, key-pad polling at public meetings, automated bicycle and pedestrian counters, and traffic camera videos, the PBII team identified barriers to walking and bicycling and developed a \$6.8M Bicycle Rapid Implementation Program (BRIP) budget proposal to guide citywide investments through 2019. The BRIP aims to expand the city's bicycle network from 42 miles to more than 70 miles of conventional bike lanes, separated lanes or off-street paths, and to complete four continuous, cross-city bicycle

Demonstrated Successes

Innovative Data Collection Techniques Gather Real-Time and Long-Term Data with Public Input Throughout the PBII process, Bellevue has emphasized understanding long-term trends and gathering feedback from people who walk and bike. Bellevue's PBII team:

- Conducted a longitudinal assessment from 2006–2015 of non-motorized collisions using the USDOT's Pedestrian and Bicycle Crash Analysis Tool (PBCAT) system;
- Gathered input using key-pad polling and comment cards at 20 public meetings and an open house that attracted 140 attendees; and
- Used online surveys to solicit public input at two stages in the BRIP development process;
- Over 700 people placed more than 1,600 points in the first online map to identify locations that they felt were unsafe for walking and bicycling;
- Over 120 people submitted more than 400 comments on conceptual designs for 52 proposed projects to make the pedestrian and bicycle systems safer.

Pedestrian and Bicycle project manager Franz Loewenherz (foreground) and Councilmember Lynne Robinson (center) lead a policy ride with local bicycle advocates in Downtown Bellevue.

MAYORS' CHALLENGE: CHALLENGE ACTIVITY 3 (GATHER DATA)

•

Culture Change (Recognition)

Application due October 28, 2016.

The Big Jump Project will help 10 places quickly complete planned high-comfort bike networks in a defined focus area and use outreach to encourage people to ride more.

The goals of the program are as follows:

- 1. Prove the concept
- 2. Develop best practices
- 3. Institutionalize the concept of connected bicycle networks
- 4. Develop common metrics of use success

Pedestrian and
Bicycle Safety
Assessment and
Awareness Report

"Provide a safe pedestrian and bicycle environment, which is a prerequisite to making non-motorized travel a viable, attractive option in Bellevue."

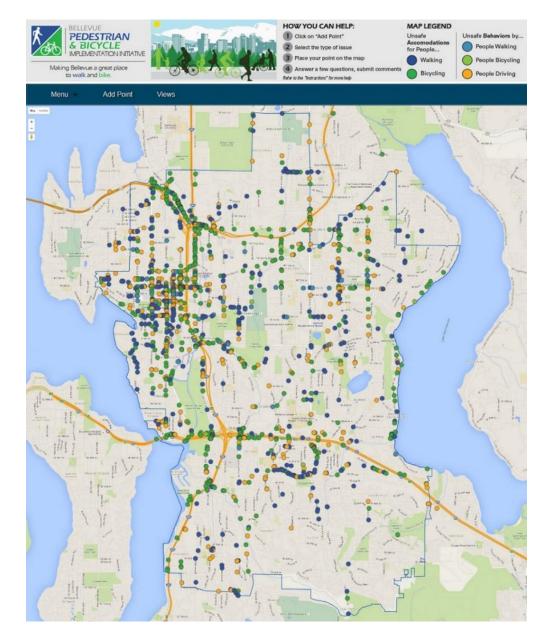

- Program Principles (2/17/15)

Amy Carlson, Vice President and Area Office Manager, CH2M HILL

	Total Points Placed	
Ped Facilities	514	32%
Bike Facilities	573	35%
Ped Behaviors	57	4%

Other	33
Grand Total	438

Task 1 - Data

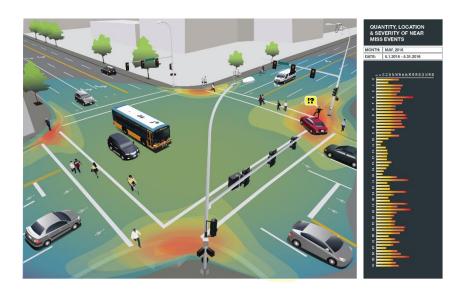

Explores potential to leverage a city's existing traffic camera system to simultaneously:

- monitor counts and travel speed of all road user groups (vehicle, pedestrian, and bicycle);
- document the directional volume of all road user groups as they move through an intersection; and,
- assess unsafe "near-miss" trajectories and interactions between all road user groups.

 - **Transportation Commission Discussion/Action**

Bicycle Priority Corridor Design Report

"Advance the implementation of Bellevue's planned Bicycle Priority Corridors to facilitate continuous bicycle travel along a connected grid of safe facilities throughout the city and the region."

- Program Principles (2/17/15)

Greg Johnson, President, Wright Runstad & Company

"The separated lane is very attractive for safety reasons. My greatest concern is the taking of scarce roadway space for a limited user base." – Lampe

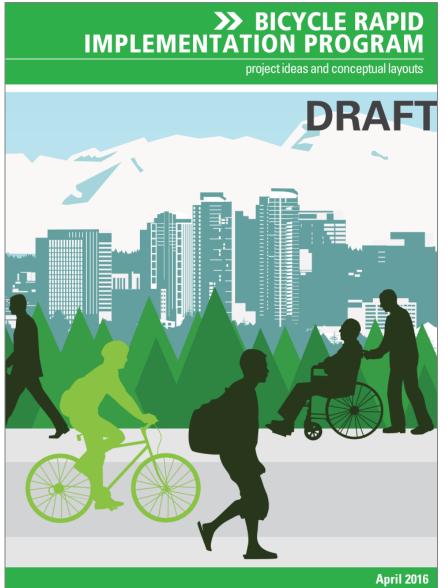

"Separating the biker from traffic is a given....
We provide it for cars to prevent accidents.
We should provide it for bikers given the imbalance in protection." – Barksdale

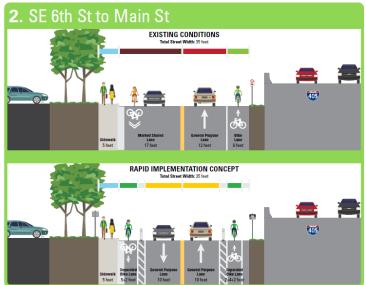

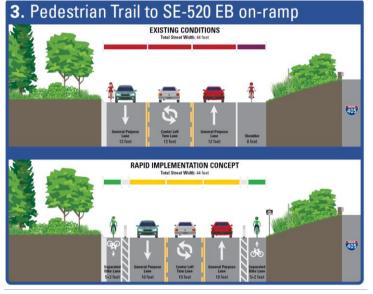

The Bicycle Rapid Implementation Program (BRIP) strives to fill gaps [Connected] along the Priority Bicycle Corridor network, and planned bicycle network, with facilities that appeal to "interested but concerned" bicyclists [Protected]. The BRIP approach emphasizes implementation of low cost/ short timeframe [Rapid] projects.

- <u>Connected</u>: Prioritizes a connected network that "fills the gaps" in lieu of piece-meal implementation.
- <u>Protected</u>: Promotes physically separated facilities to minimize conflicts between roadway users where possible.
- <u>Rapid</u>: Identifies early-win opportunities that can be implemented quickly to advance project delivery.

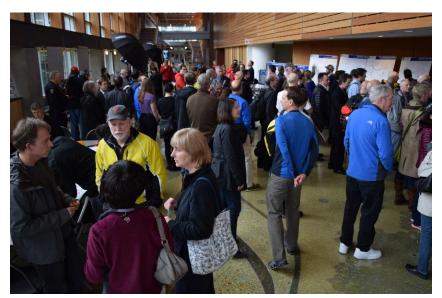

"We strongly urge you to prioritize funding for a complete, connected 57 mile network of bike/ped infrastructure throughout Bellevue, emphasizing protected bike paths as much as possible."

- Eric Artz, Chief Operating Officer

"We support increased investment in bicycling infrastructure and taking rapid action on the following projects ..."

- Al Kinisky, Senior Director of Real Estate

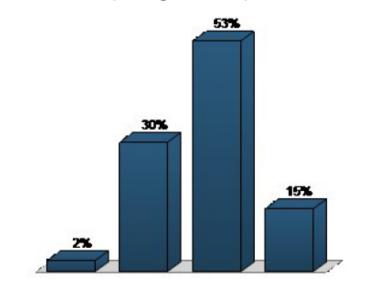

"... the Bicycle Rapid Implementation plan is a cost-effective strategy to help transform Bellevue into a safe and inviting urban center for bicyclists and vital for improving station access in preparation for Sound Transit's East Link...."

- Lisa Brandenburg, President

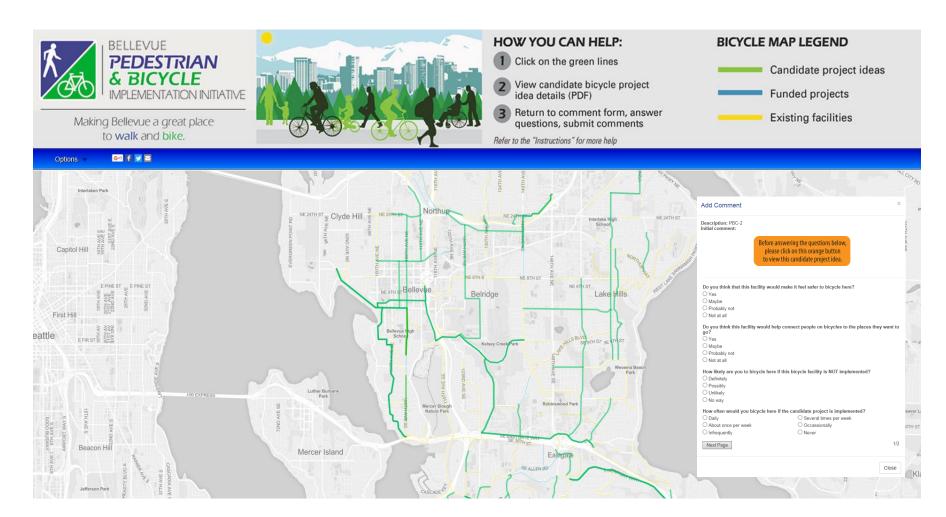

Which of these types of facilities would encourage you to bicycle in Bellevue? (Multiple Choice)

	Responses	
	Percent	Count
Shared Lane Marking	2.42%	3
Bike Lane	29.84%	37
Protected Bike Lane	53.23%	66
Off-Street Path	14.52%	18
Totals	100%	124

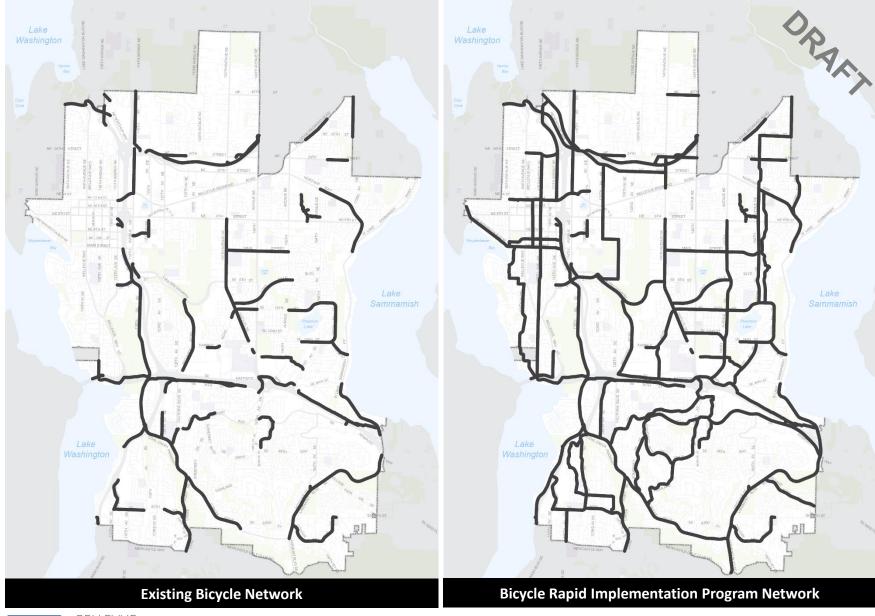

Source: City of Bellevue, Bicycle Rapid Implementation Program Open House, March 23, 2016.

From March 17 – April 30 (2016) people provided feedback on 52 project ideas representing 57 miles of bicycle facility improvements: 2 miles of off-street path, 24 miles of separated bike lanes, 13 miles of conventional bike lanes, and 18 miles of shared roadway.

News Release

FOR IMMEDIATE RELEASE: Wednesday, July 27, 2016

Council Roundup: Fire, Transportation levies approved for November ballot

The City Council on Monday voted 6-0 to place two measures focusing on Fire Facilities and Transportation Safety, Connectivity and Congestion improvements on the Nov. 8 general election ballot.

"These proposals are targeted investments by the community, for the community," said Mayor John Stokes. "The process of putting together these two measures has been a great team effort. Now it's time for the voters to weigh in."

If approved, the measures would increase property taxes by 12.5 cents per \$1,000 of assessed value for fire facilities improvements and 15 cents per \$1,000 of assessed value for transportation improvements. Combined, the two measures would cost the owner of a home with an assessed value of \$640,000 (the median value in Bellevue) about \$176 per year.

The Fire Facilities measure would pay for: seismic retrofits to fire stations; building a new downtown station, upgrades to existing stations; and adding warehouse space for reserve equipment.

The measure for Transportation Neighborhood Safety, Connectivity and Congestion improvements would pay for: neighborhood safety projects; reducing neighborhood congestion; new sidewalks, trails and paths; technology for safety and traffic management; enhanced sidewalk and trail maintenance; and new bike facilities.

Monday's vote also caps an outreach effort by staff and the council to get feedback from the community and to help shape the two measures. Three open houses were held in late June and an online survey was conducted for four weeks. Results of the survey showed that 67 percent of the 800 respondents supported a fire facilities measure. Similarly, 64 percent indicated support for a transportation safety and connectivity measure.

Additional background material on the ballot measures, including maps, the ordinances and ballot language approved by the council and a summary of community feedback, can be found on the city's webpage.

Task 4 – Next Steps

Pedestrian and Bicycle Count Assessment Report

"Research pedestrian and bicycle count technologies to improve the City's data driven decision-making."

- Program Principles (2/17/15)

"Downtown Bellevue is not an area where the faint of heart would choose to ride; that said, it is prime for investment to attract additional riders. What's needed are safe and inviting bicycle facilities that are separated from the auto."

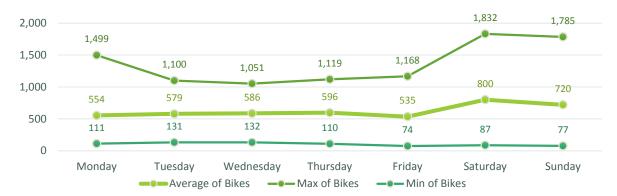

- Karen Doherty, VicePresident, Puget Sound AreaManager of HDR

Pedestrian and Bicycle Count Report 2015

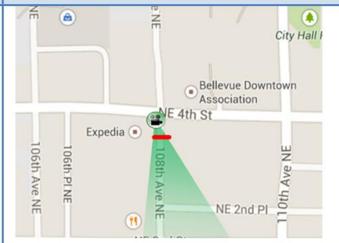

108th Ave NE S/O NE 4th St

Screenline

Camera Location

Previous Methodology

- Three consecutive "typical" days
 - Tuesday-Thursday
 - late September, early October
 - twice a year starting from 2016
- Two peak periods
 - 7:00 am 9:00 am
 - 4:00 pm 6:00 pm
- Video recordings
 - using existing traffic cameras
- Manual counts
 - reviewing and manually counting the volumes
- Disadvantages
 - time consuming
 - staff availability
 - sample too small for drawing conclusions

Infrared Sensor at I-90 Trail

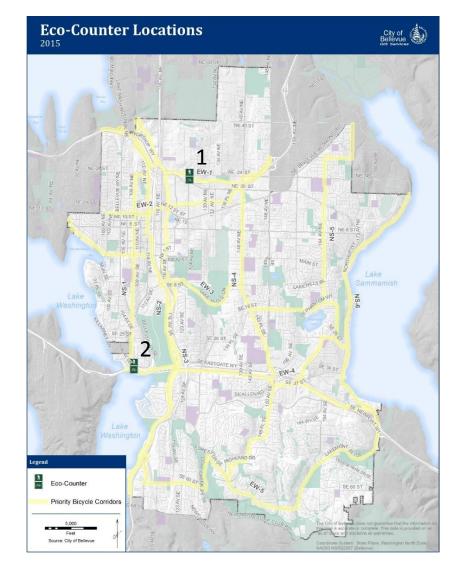

Inductive Loop Detector at SR-520 Trail

Current Methodology

- Eco-Counter System
- Combination of an inductive loop detector and an infrared sensor
- Records 24/7/365 data
- Automatic data transmission to the Eco-Counter software
- Easy download as soon as the next day
- Data available for 15min period, 1 hour, day, week, month and quarter
- Measures the direction of travel (SR-520 Trail)

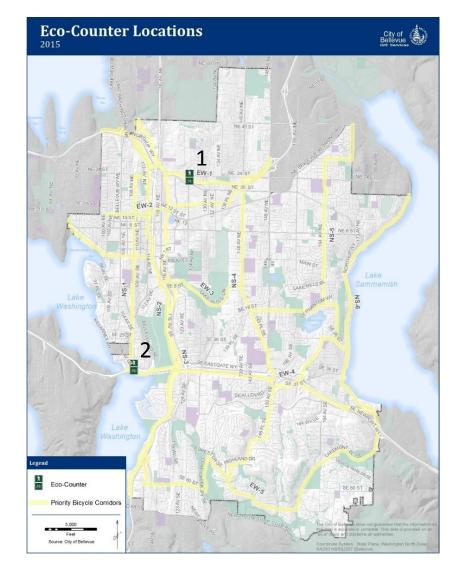

Eco-Counter Locations – SR 520 Trail

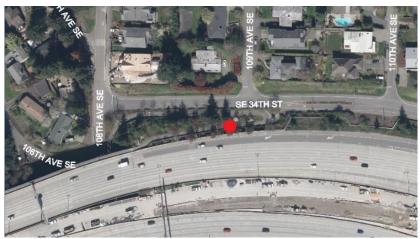

1. SR 520 Trail location south of NE 24th St

Eco-Counter Locations – I-90 Trail

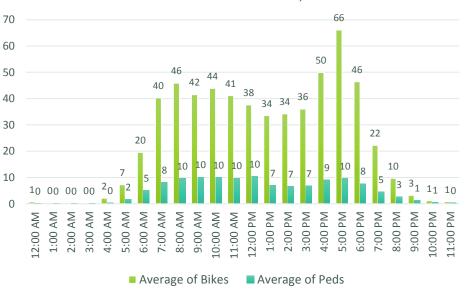

2. I-90 Trail location at SE 34th St & 109th Ave SE

Average Hourly Pedestrian and Bicycle Volumes I-90 and SR 520 Trail Counter Locations

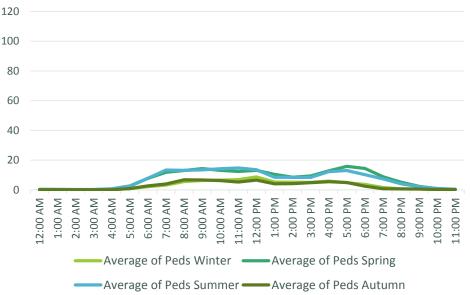

Average Hourly Pedestrian and Bicycle Volumes SR 520 Trail Location, 2015

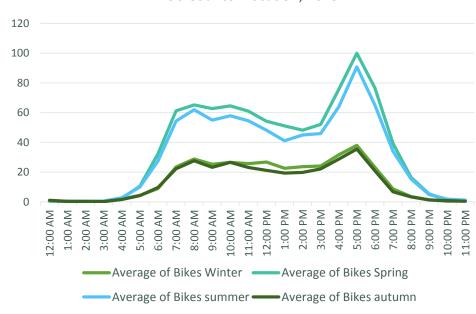

Average Hourly Pedestrian and Bicycle Volumes by Season I-90 Trail Counter Location

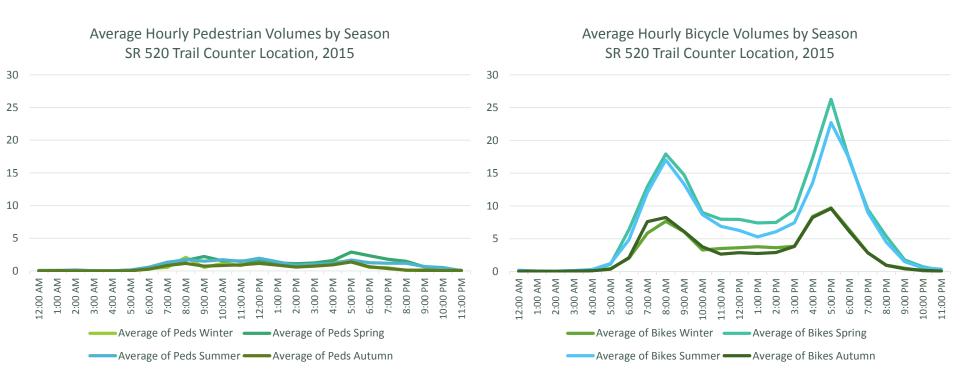

Average Hourly Bicycle Volumes by Season I-90 Counter Location, 2015

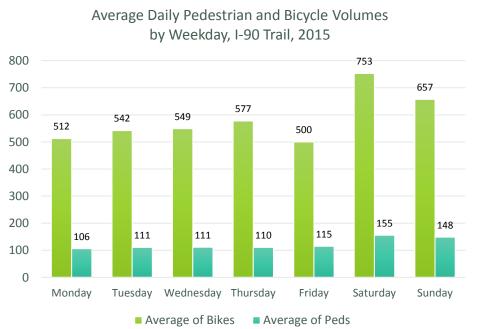

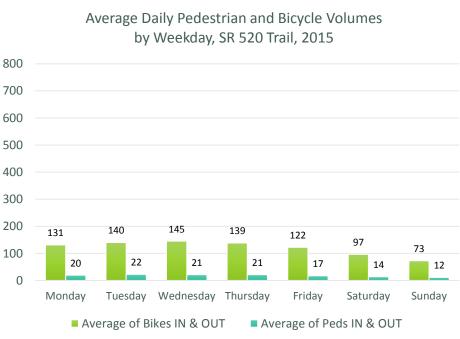

Average Hourly Pedestrian and Bicycle Volumes by Season SR 520 Trail Counter Location

Average Daily Pedestrian and Bicycle Volumes by Weekday I-90 Trail and SR 520 Trail Counter Locations

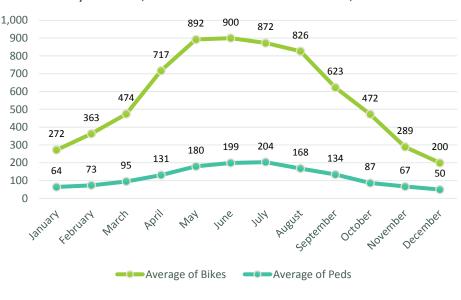

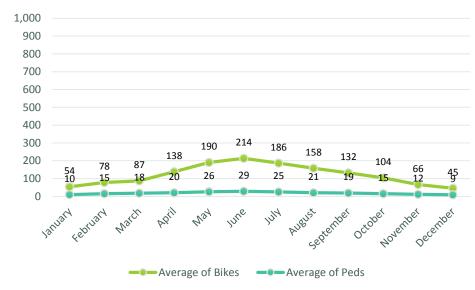

Average Daily Pedestrian and Bicycle Volumes by Month I-90 Trail and SR 520 Trail Counter Locations

Average Daily Pedestrian and Bicycle Volumes by Month, I-90 Trail Counter Location, 2015

Average Daily Pedestrian and Bicycle Volumes by Month, SR 520 Trail Counter Location, 2015

Key Findings

- I-90 saw higher weekend activity while 520 saw higher weekday activity.
- Bicycle volumes were 4-5x higher than pedestrian volumes on I-90 and 6-7x higher on 520.
- Bicycle activity on both trails increased significantly during peak hours while pedestrian activity did not.
- More favorable weather conditions resulted in an increase in both bicycle and pedestrian activity.

Conclusions and Next Steps

- Once the 520 trail is completed and extends to Seattle, trends in bicycle and pedestrian activity will likely change significantly.
- Bicycle activity is consistently higher than pedestrian activity, most likely due to the length of the trails and their accessibility to major destinations.
- The City is planning on installing more Eco-Counters along the Priority Bicycle Corridors and other key locations.
- The data collected this year will provide a baseline for next year's count report as the city continues to invest in more automated counter technology.
- Further analyses will include permanent on-street bike loop detectors that the city is installing at the signal with any new project.

Community Engagement: Wikimap Online Surveys

Transportation Commission October 13, 2016

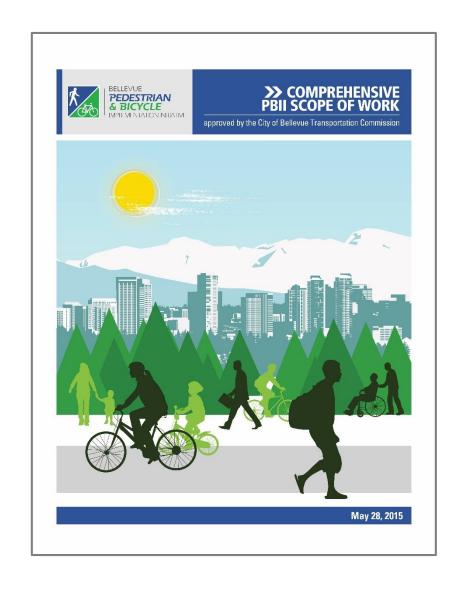

Andreas Piller Assistant Transportation Planner City of Bellevue

PBII Council Strategy:

 Engages stakeholders at the earliest stages of scope development to ensure their input is included in project design.

PBII Program Principle:

Engage community
 stakeholders in setting the
 priorities for investment in
 non-motorized facilities.

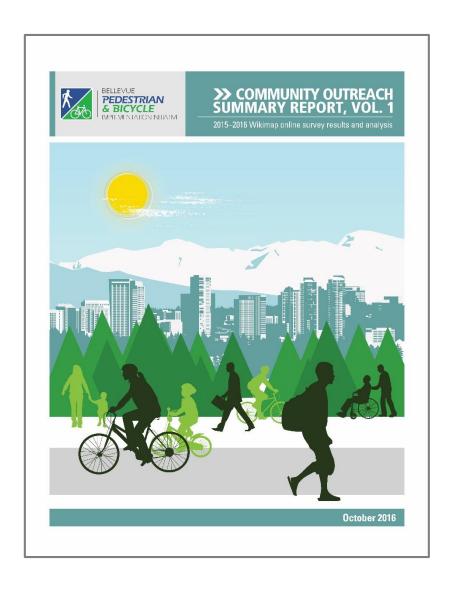

Wikimap 1

- Identify walk/bike safety issues,
- Report near misses,
- Suggest preferred solutions

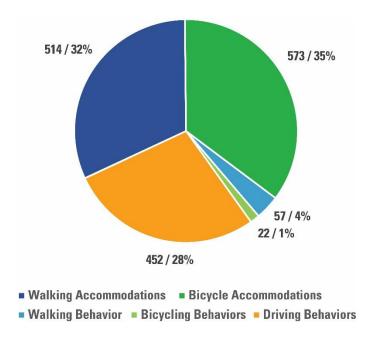

Wikimap 2

 Review and comment on BRIP project ideas

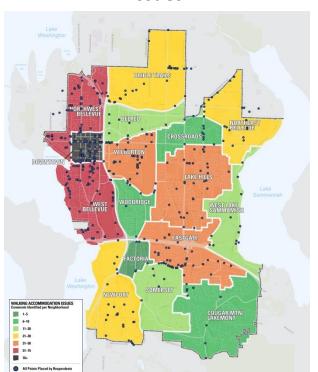

- Survey available online from August 26 – November 1, 2015
- 700+ respondents
- 1,600+ points

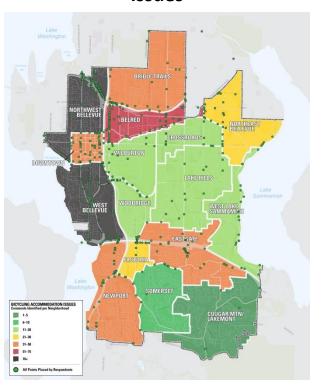

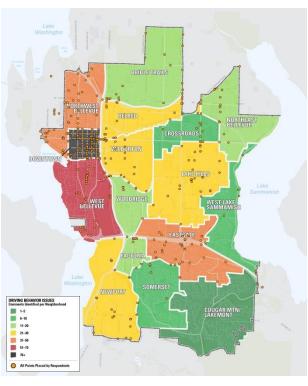

Walking Accommodation Issues

Bicycle Accommodation Issues

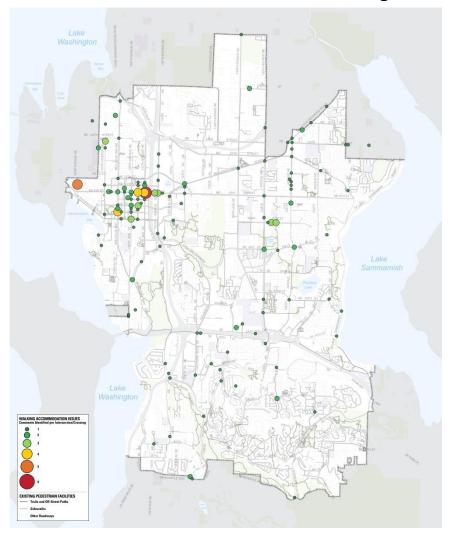

Driving Behavior Issues

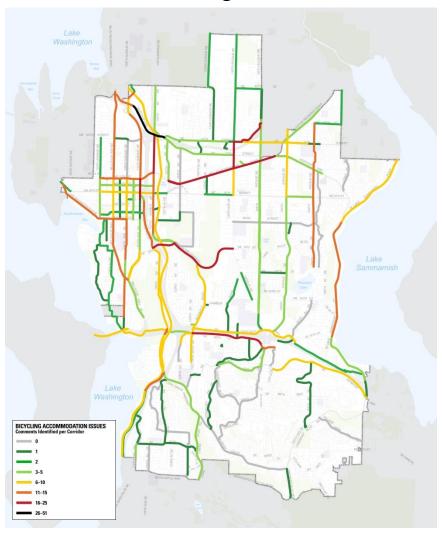

Issues along Corridors

Issues at Intersections/Street Crossings

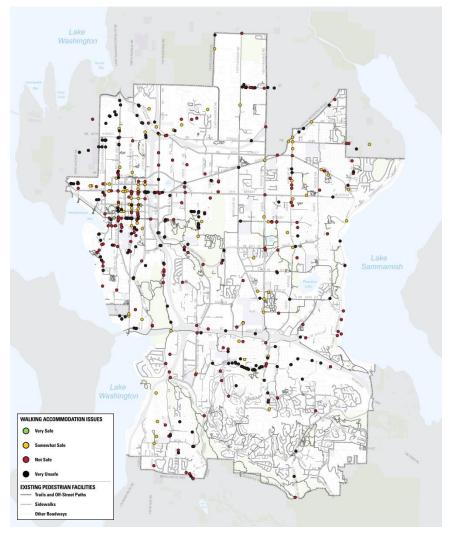

Issues along Corridors

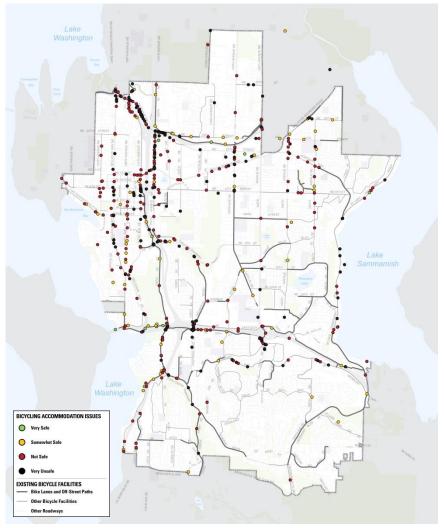

Walking Accommodation Issues

Bicycle Accommodation Issues

Perceived Safety

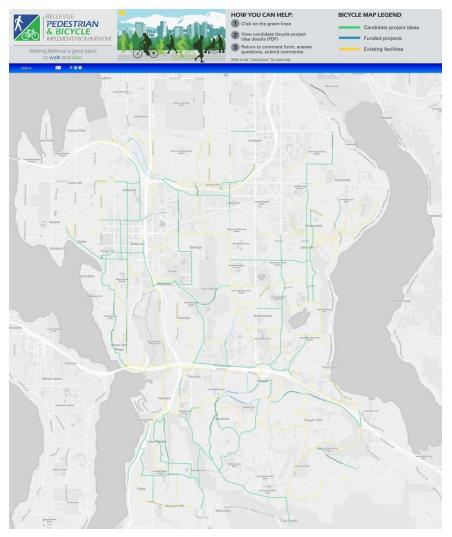

Walking Accommodation Bicycle Accommodation Driving Behavior Issues Issues **Issues**

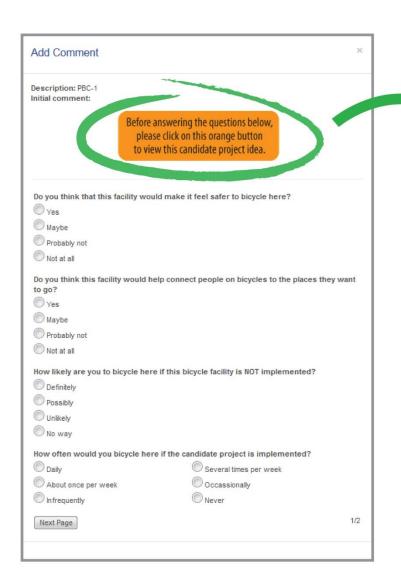

Near Misses

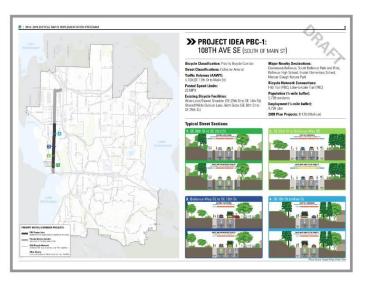

- Survey available online from March 15 – April 30, 2016
- 52 BRIP project ideas
- More than 500 responses
- Over 130+ respondents

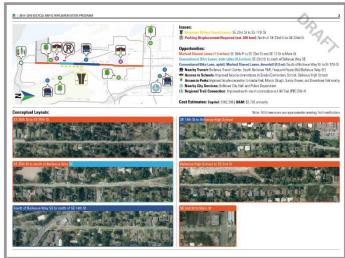

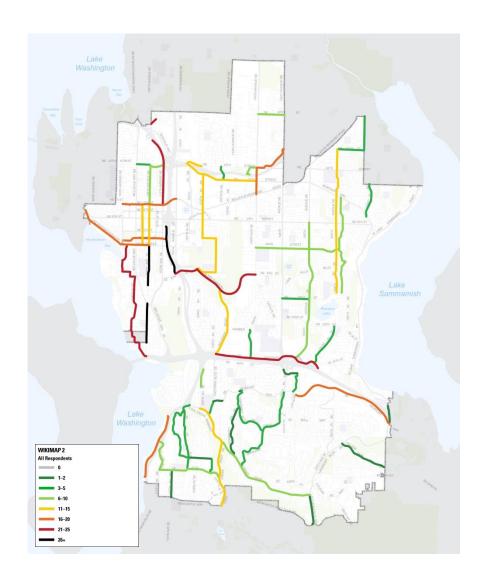

Wikimap 2 Format

Some general takeaways:

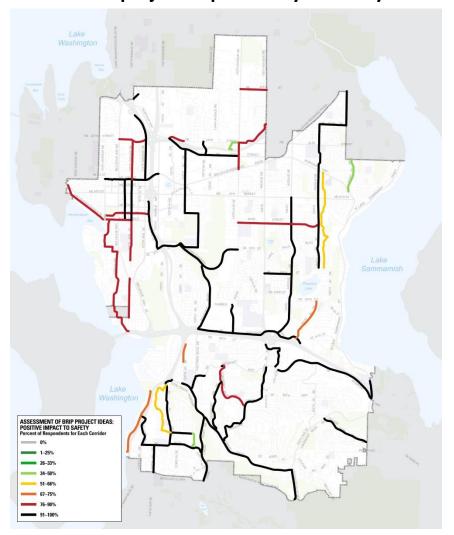

- Highest interest in project ideas providing access to Downtown
- I-90 corridor also notable
- Little concern about on-street parking among respondents

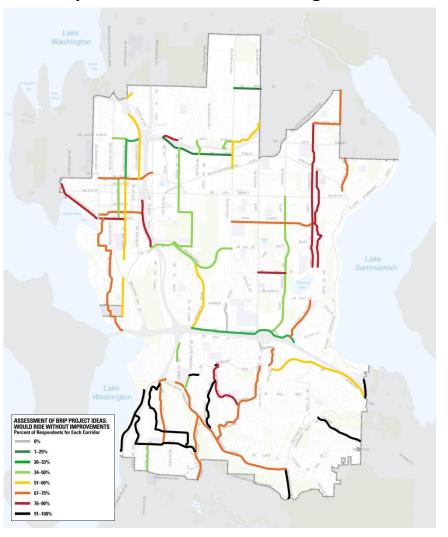

Wikimap 2 Takeaways

Would project improve bicycle safety?

Would you ride here under existing conditions?

Wikimap 2 Safety

- Review and refine project conceptual designs
- Develop BRIP project implementation strategy
- Coordinate with other programs to advance project delivery
 - Neighborhood Sidewalk Program
 - Neighborhood Traffic Safety
 - Overlay Program
