TRANSIT / AUTO TRAVEL TIME ANALYSIS

With a few exceptions, travel time using transit in Bellevue and from Bellevue to regional centers is higher than travel time using the automobile. This report investigates this difference to provide a snapshot of the competitiveness of transit as compared to the automobile at one moment in time. The data contained in the appendix of this report and summarized here provides detailed information about which neighborhoods, specifically, have higher and lower relative travel times by transit.

There are many reasons to track the competitiveness of transit. One reason is that competitive transit routes have the potential to decrease the use of the automobile. A reduction in the use of the automobile is

one of the City of Bellevue’s sustainability goals. This goal supports a state-wide goal to reduce annual per capita vehicle miles traveled by fifty percent from 2011 to 2050.

Studies have shown that people’s perceptions of the difficulty of taking transit inhibits them from switching modes. The travel time information, which is contained here in this report, can help provide a basis from which to judge a trip’s difficulty to potential transit users.

This travel time analysis serves two purposes:

1. To identify routes and times where transit users can reach their destination faster, as fast, or slightly longer than taking the same trip by car.
2. To identify routes where transit service is not competitive to taking the car.

The detailed information on the competitiveness of transit that is contained within this report will allow the individual needs for each area to be addressed in future planning efforts. In addition, data contained within this report can provide a baseline Transit - Auto Travel Time Level of Service (LOS), using the USDOT graded scale that is consistent with the Transit Capacity and Quality of Service Manual—2nd Edition. This scale is based on the time difference between a trip by transit and a trip by automobile.

Methodology

To understand the competitiveness of transit service in comparison to the automobile, travel times of both modes were measured between Bellevue Activity Centers, Neighborhoods, and Regional Centers (see Table 1 for a list of the locations and specific inquiry points used in the analysis). All travel time measurements were taken using Google Maps.

“My commute is shorter by bus than if I were to drive non-HOV”

*Jason, Commute to Work and
Special Events Transit User
Resident of Marysville*

Transit travel times were then compared to the time it would take to reach the same destination at the same time of day by car. Transit and auto travel trips were measured at the times of day listed below. For the AM and PM peak, traffic congestion was factored into the auto travel times:

- AM Peak (7:00 AM)
congested travel time is reflected
- Midday (1:00 PM)
- PM Peak (5:00 PM)
congested travel time is reflected
- Evening (8:00 PM)

Table 1 Auto and transit times are calculated at both the local and regional level. At the local level, connections between Activity Centers and Neighborhoods are considered. At the regional level, connections between Activity Centers and Regional Centers are considered. In each case, the address listed in the table is assumed to be the center of the area. Regional destinations center on transit hubs.

Activity Centers	Place	Address
Downtown Bellevue	Bellevue Transit Center	108th Ave NE & NE 6th St
Crossroads	Crossroads Mall	156th Ave NE & NE 10th St
Overlake	Overlake Park & Ride	Overlake Park & Ride
Factoria	Factoria Square Mall	Factoria Blvd SE & SE 40th Ln
Eastgate	Eastgate Park & Ride	140th Ave SE & SE 32nd St
Neighborhoods	Place	Address
Bridle Trails	N. Bellevue Community Center	148th Ave NE & NE 43rd St
Richards Valley	Woodridge Elementary School	123rd Ave SE & SE 20th St
Somerset	Somerset Elementary School	Somerset Blvd SE & 143rd Ave SE
Northwest Bellevue	Northtowne Shopping Center	104th Ave NE & NE 28th Pl
Northeast Bellevue	Bellevue Youth Theater	Northup Way & 168th Ave NE
East Bellevue	Lake Hills Shopping Center	156th Ave SE & Lake Hills Blvd
Southwest Bellevue	Enatai Elementary School	104th Ave SE & SE 22nd St
Wilburton	Sammamish High School	140th Ave SE & SE 1st St
Newport Hills	Newport Hills Shopping Center	119th Ave SE & SE 58th St
Eastgate	S. Bellevue Community Center	150th Ave SE & SE Newport Way
Newcastle	Cougar Ridge Elementary School	164th Ave SE & SE 46th Way
Regional Centers	Place	Address
Downtown Seattle	International District/Chinatown Tunnel Station	International District Station
UW Medical Center	Future University Link Light Rail Station (2018)	NE Pacific St & NE Pacific Pl
Redmond	Redmond Transit Center	16160 NE 83rd St, Redmond
Kirkland	Kirkland Transit Center	3rd St & Park Ln, Kirkland
Issaquah	Issaquah Transit Center	1050 17th Ave NE, Issaquah
Renton	Renton Transit Center	257 Burnett Ave S, Renton
SeaTac Airport	Seattle-Tacoma International Airport	
Bothell	Bothell Park & Ride	10303 Woodinville Dr, Bothell
Lynnwood	Lynnwood Transit Center	20100 48th Ave W, Lynnwood
Everett	Everett Station	Smith Ave & 33rd St, Everett

The comparison of travel time by transit to travel time by auto was calculated in the form of a ratio by dividing transit travel time by auto travel time, which is referenced in this section as the “Transit/Auto Ratio”. Ratios greater than 1.0 reflect transit travel times that exceed auto travel times.

For trips by transit, travel time includes any necessary walking and waiting time from the time the transit rider begins the trip to the time the destination is reached. Trips begin at times independent of the time of inquiry. When a bus does not serve a local destination within an hour of the time of inquiry, and a walking route is available, the trip begins or ends with a walk trip. As a general rule of thumb, Transit / Auto Ratios times of 2.0 or above for trips by transit are considered not competitive to trips by auto. A complete record of travel times can be found in the Appendix.

Regional vs. Local Travel Times

Regional Routes (those between Bellevue Activity Centers and Regional Centers) were considered separately from Local Routes (those within Bellevue city limits). In general, regional trips made on transit are more favorable than local trips in terms of travel time because many more transit routes converge at Bellevue Activity Centers and Regional Centers, eliminating the necessity to walk to a transit route. Because inquiry points for many Bellevue Neighborhoods do not always coincide with locations served by multiple transit routes, an additional walk time at the beginning or end of a trip is often necessary. See Figure 1 for an example of an instance when the fastest transit trip requires a long walk.

Table 2 shows average weekday Transit/Auto Ratios for the four test times of the day for both Regional Routes and Local Routes. Regional trips are most

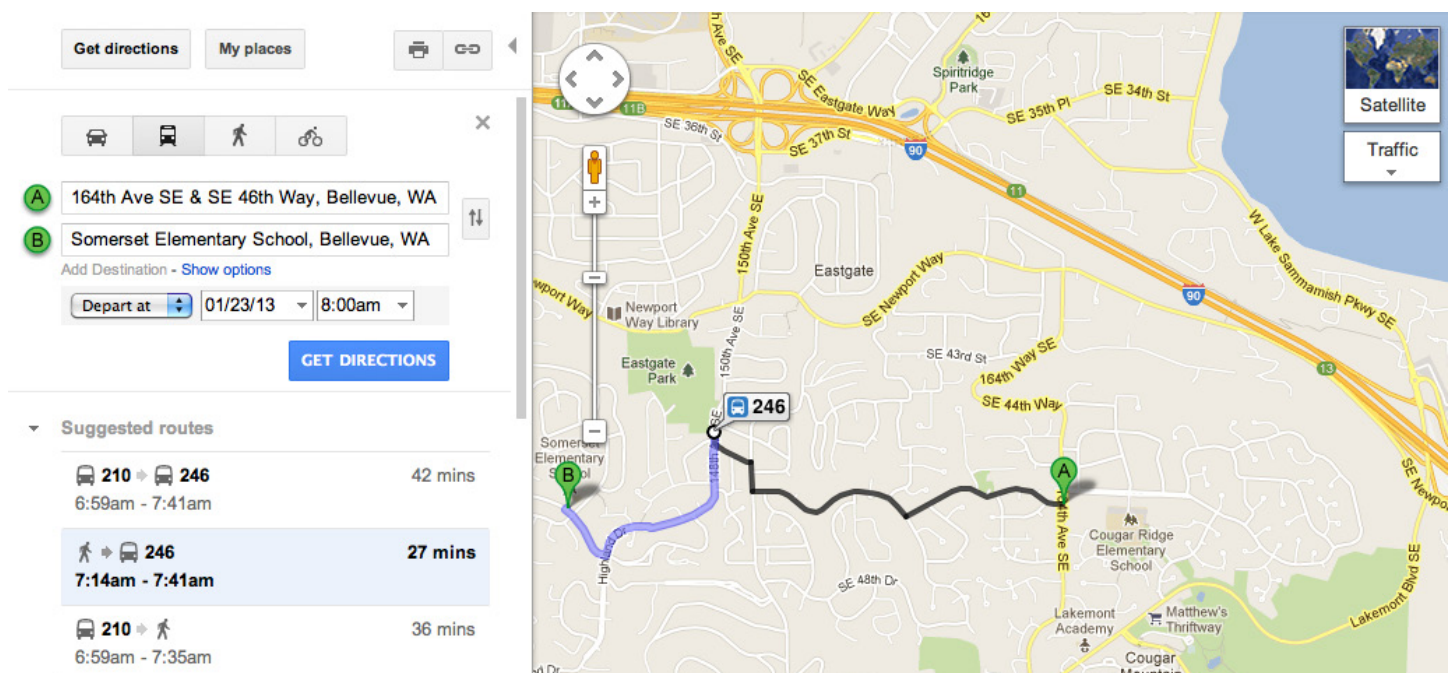

Table 2 Average weekday Transit/Auto Ratios for regional routes leaving Bellevue Activity Centers and local routes within Bellevue.

	Regional Routes	Local Routes
AM	2.2	2.3
MID	2.6	2.9
PM	1.6	2.4
EV	2.5	3.5

competitive during the PM peak travel time shown by a Transit/Auto Ratio of 1.6 (transit travel takes close to one and a half time longer than auto travel). The PM peak is more highly congested for auto travel than the AM peak, meaning that transit travel times become more competitive in the PM peak due to time saving infrastructure such as HOV lanes that regional transit can take advantage of and those who drive alone cannot. Transit travel is least competitive during the mid-day, for regional trips, when highway and arterial traffic congestion is minimal, and in the evening for local trips, when many routes directly serving neighborhoods are no longer in service.

It is not often that auto travel times exceed transit travel times. The inherent nature of transit, with the need to cue passengers and receive fares, makes travel time in general a little slower. However, this extra time is often offset in the eyes of the traveler by the higher cost to drive a car, park, and spend time looking for a parking space. Depending on factors such as the cost and availability of parking at the destination, and the length of the trip, it could be acceptable for most riders to tolerate travel times

Figure 1 Transit to some Bellevue neighborhoods is not available at all times, requiring transit riders to walk to points where transit is available.

that are up to one and a half times the amount of time it would take them to drive.

Transit trips between the five Bellevue Activity Centers and Regional Centers take between one and three times as long as driving at all times of day, weekdays and weekends. Transit connections between Bellevue Activity Centers and the eleven neighborhoods can take much longer, sometimes reaching over nine times the auto travel time when indirect service results in long walks between the nearest bus stop and origin or destination location.

Travel Times from Bellevue Activity Centers to Regional Centers

Several Sound Transit Express Routes provide efficient travel by transit along the I-405 and I-90. It takes less time (29 minutes) to reach the Renton Transit Center from the Bellevue Transit Center on Sound Transit Express Route 566 than it takes to drive (31 minutes with congestion) (Transit/Auto Ratio of 0.89). Travel north from the Bellevue Transit Center to the Bothell Park & Ride is faster on Sound Transit Express Route 535 (31 minutes) versus a congested drive time of 35 minutes (Transit/Auto Ratio of 0.89). Along the I-90 corridor, it is just as fast to reach the Issaquah Transit Center on the Sound Transit Express Route 555 / 556 from the Eastgate Park & Ride as it is to drive.

Despite generally shorter travel times by transit between Bellevue Activity Centers and Regional Centers in comparison with travel times within Bellevue, it still takes a long time to reach some regional destinations, such as the Seattle Tacoma International Airport, using transit. Travel to the airport will improve once the Sound Transit East Link Light Rail service opens its East Link. However, at

“If T-Mobile was located in Downtown Bellevue, I would take the bus every day. The fact that we are in Factoria and I must transfer buses makes it impossible to commute to work in a timely manner.”

*David, Former Transit Rider
Resident of Lynnwood*

this time origins within Bellevue can link to the ST Express Route 560, with service to the airport taking approximately 40 minutes. When combined with connecting service and wait times, it often takes between three and four times as long to reach the airport by transit, especially at offpeak times:

- It takes 93 minutes to reach the airport from the Crossroads Mall at midday on Metro RapidRide B Line, transferring to ST Express Route 560, as compared to a 26-minute trip by car, a Transit/Auto Ratio of 3.58.
- It takes 81 minutes to reach the airport from the Factoria Square Mall in the evening on Metro Route 240, transferring to ST Express Route 560, as compared to a 20-minute trip by car, a Transit/Auto Ratio of 4.05. Transit/Auto Ratios for other times of the day range from 2.53 in the PM Peak to 3.25 at Midday.

Travel times to the University District, across the SR 520 bridge on the frequent Metro Route 271 take 25 minutes from the Bellevue Transit Center. Despite this fast auto travel time, the Auto Trip Planner Tool from Google Map produced an even faster, 13 minute, driving time, resulting in a Transit / Auto Ratio of taking almost twice as long to take transit as it takes to drive. Metro Route 271 connects to the Eastgate Park and Ride, with a slightly higher Transit / Auto Ratio approximately 2.29 depending on the time of day (39 minute transit travel time / 17 minute auto travel time).

“A car trip from Redmond to Bellevue takes 15 minutes; a bus trip to the same place takes 30-45 minutes; that's not convenient.”

*Timothy, All-Around Transit User
Resident of Bellevue*

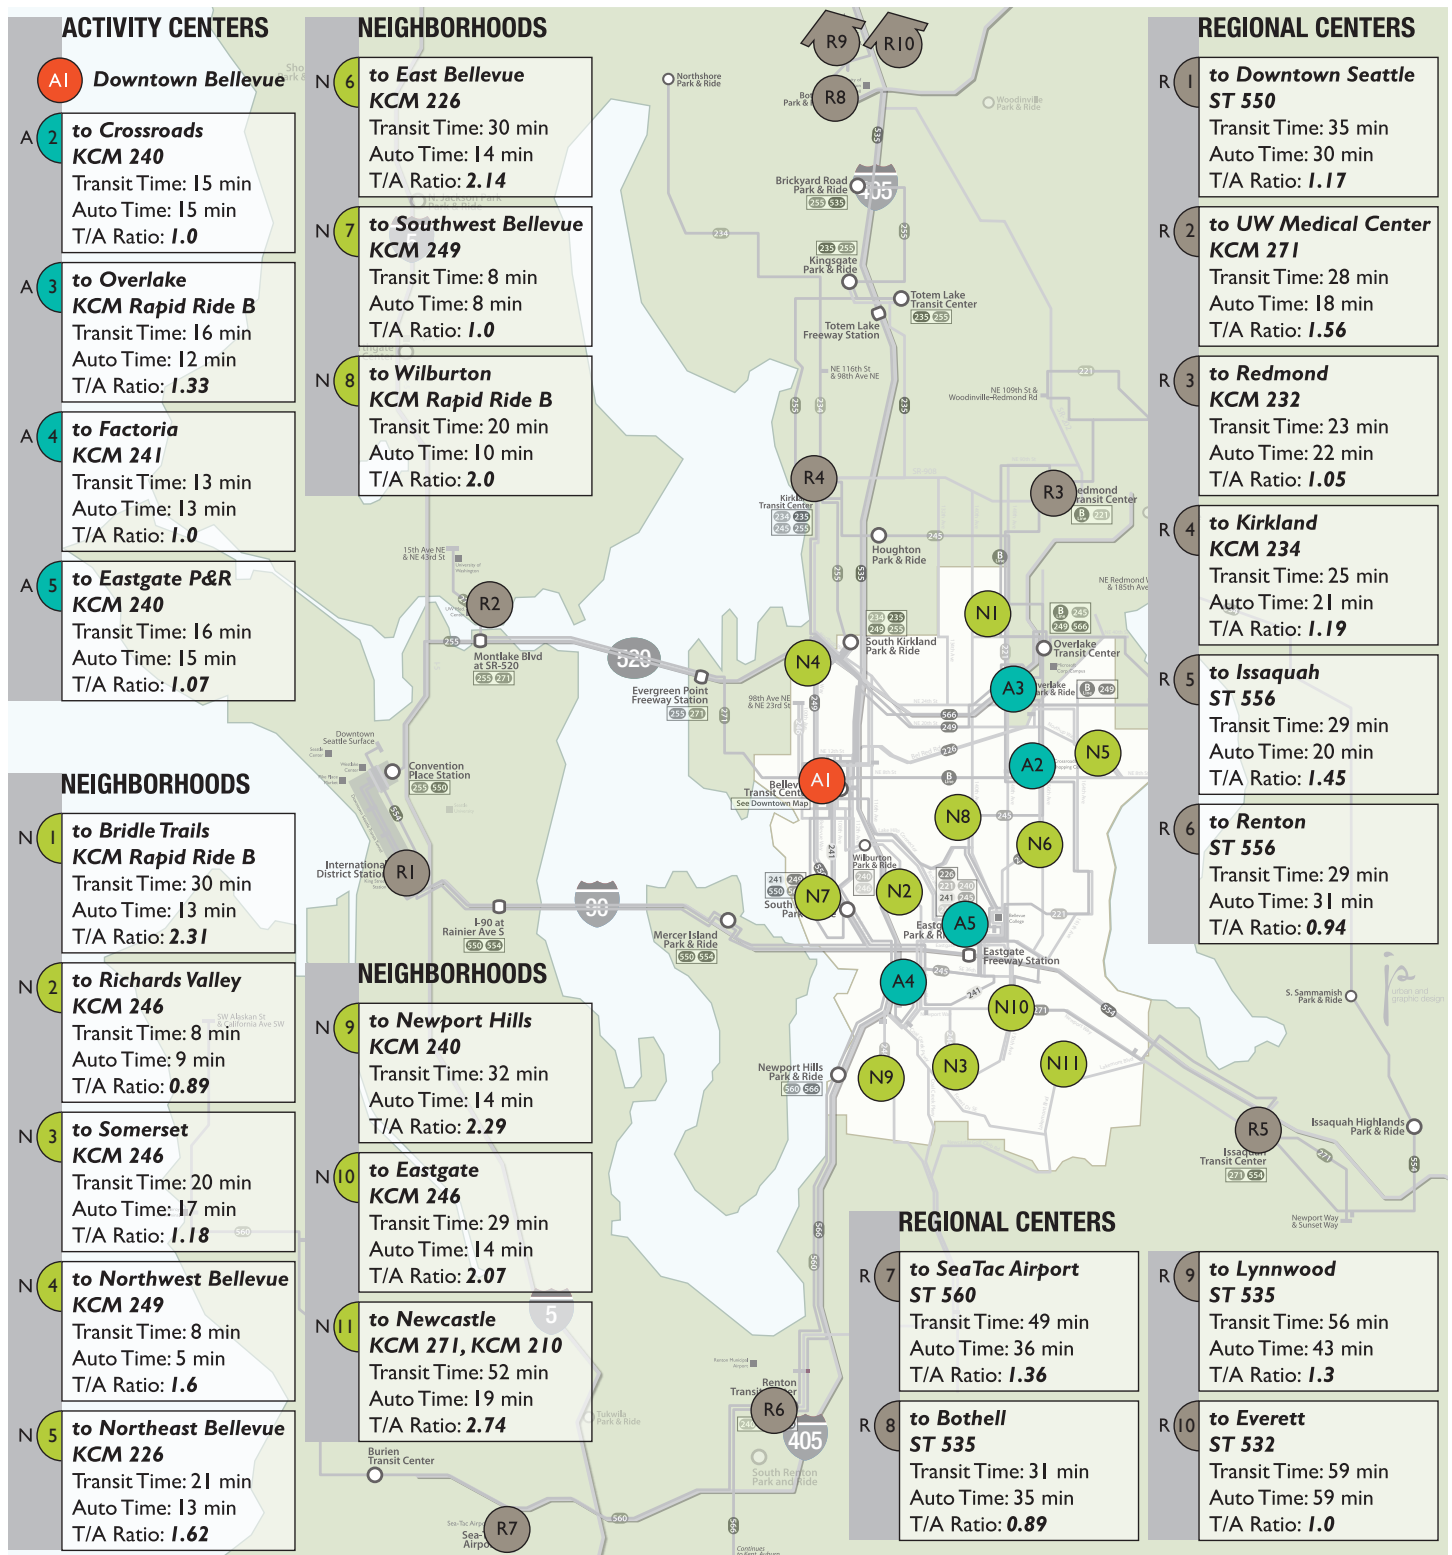

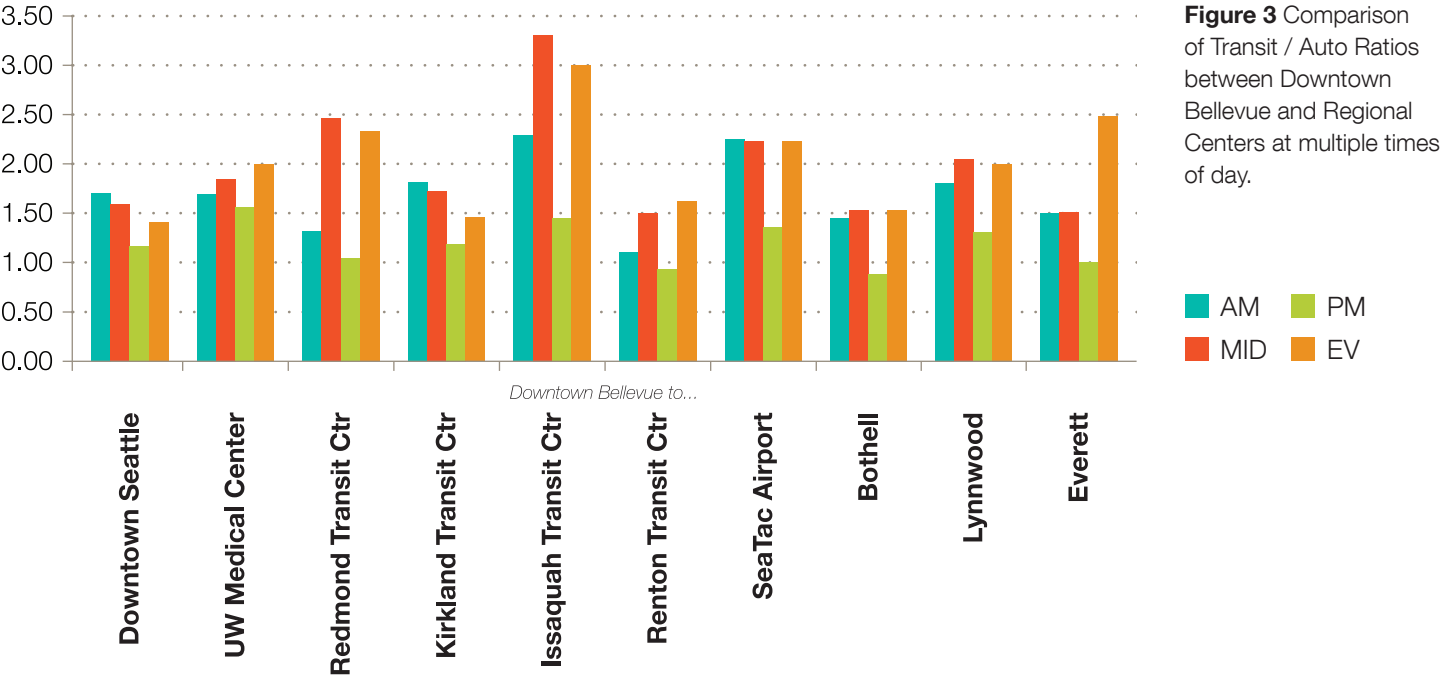

Figure 2 Transit travel time from Downtown Bellevue to local and regional destinations.

Travel Originating from the Bellevue Transit Center

The Bellevue Transit Center offers relatively efficient travel by transit to many destinations. Figure 2 shows a map of the region with weekday PM Peak

transit times, auto times, and Transit/Auto Ratios for destinations originating in Downtown Bellevue. Nine destinations can be reached by transit in the same amount of time or less time than it takes to take a car. These are; Crossroads, Factoria, Richards Valley, Southwest Bellevue, Renton, Everett, Eastgate Park and Ride, Redmond and Bothell. Ten additional destinations can be reached by transit in less than twice as long as it takes to ride the bus. The highest TA ratio from the Bellevue Transit Center at the PM Peak time is 2.75 to Newcastle. This ratio is highest

because the trip by transit requires a transfer from Route 271 to Route 210, and the 13 minute auto route uses the fast I-405.

This concept of fast connections from Bellevue Transit Center is further explored in Figure 3. This figure shows weekday travel times between Downtown Bellevue and regional destinations at all four test times of day. Travel times on transit are competitive both to Downtown Seattle and the University District. Evening travel to Everett has a high ratio compared to travel during other times of the day, though this may be caused by infrequent service and lack of

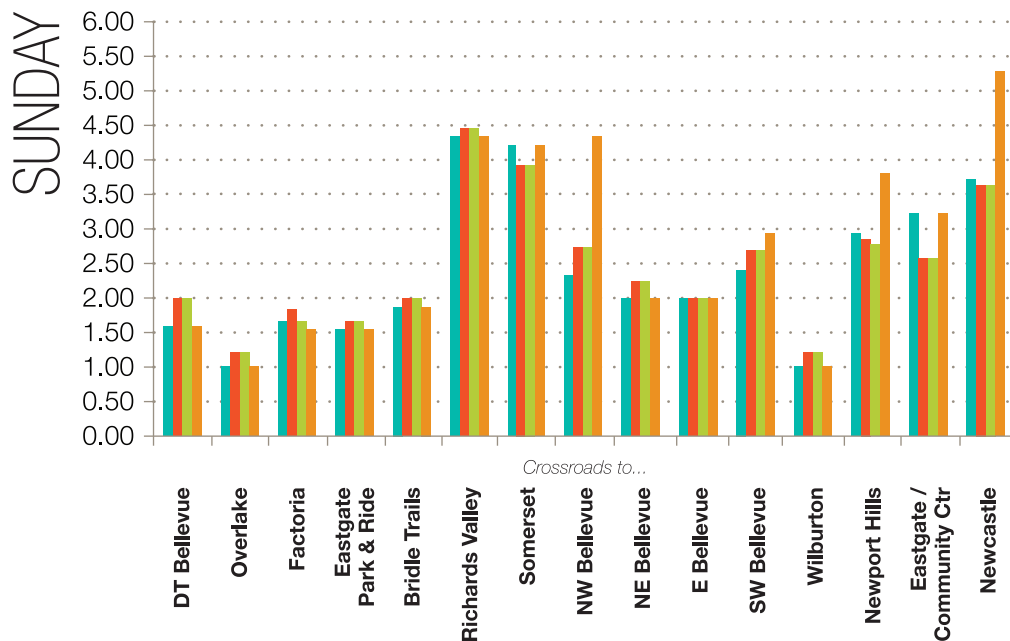

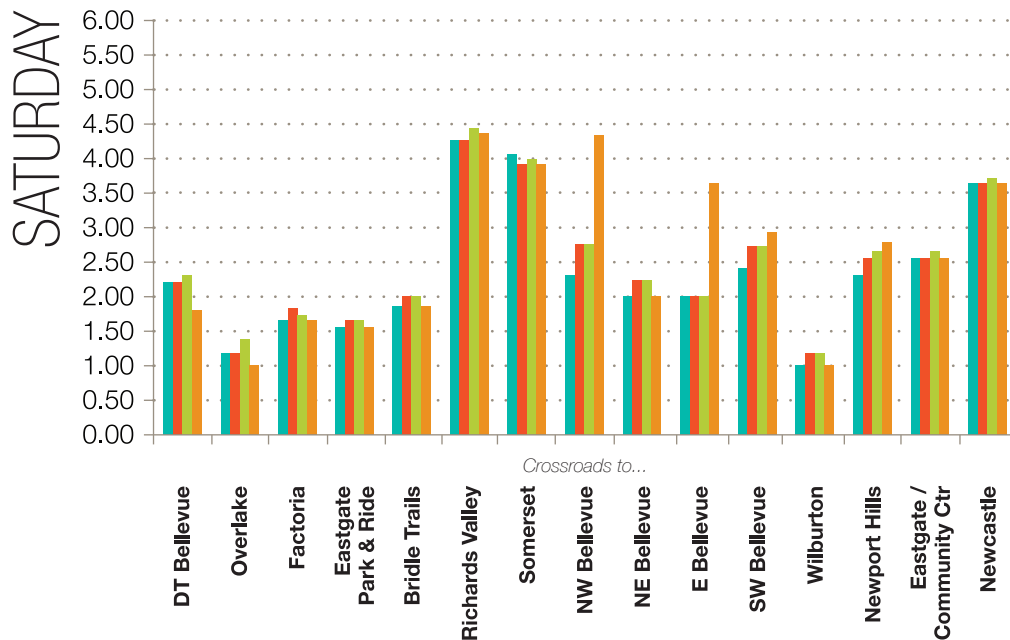

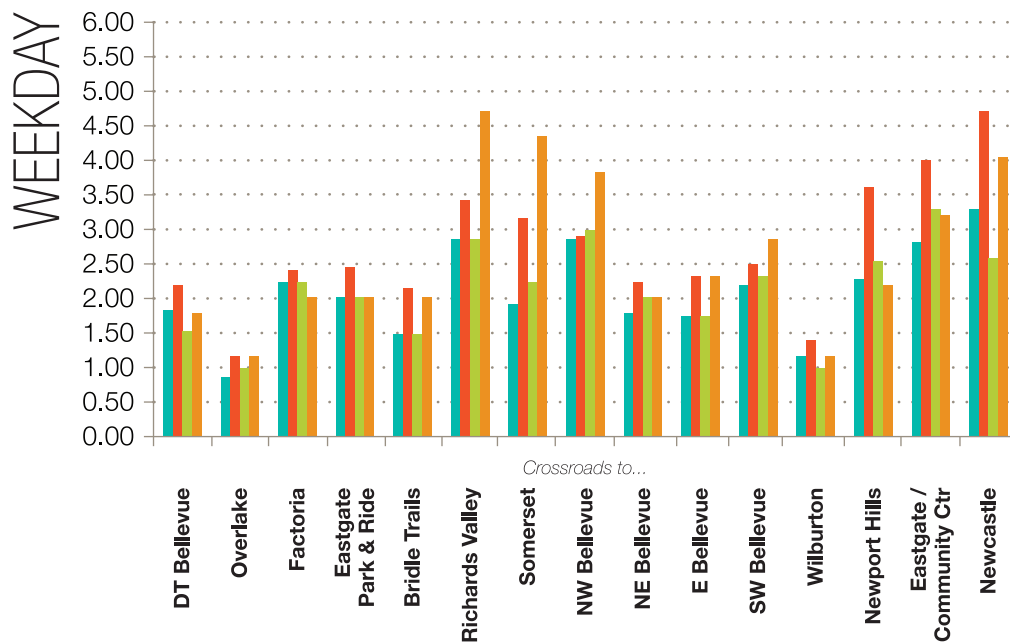

Figure 4 Comparison of Transit / Auto Ratios between Crossroads and destination within Bellevue for weekday, Saturday, and Sunday travel time.

AM PM
MID EV

evening service on ST Route 532. Travel to Issaquah has a relatively high ratio at all times of day except the PM peak, when it drops below 1.5. It is difficult for transit to compete with fast auto times of 14 minutes, 13 minutes, 20 minutes, and 13 minutes for AM Peak, Midday, PM Peak, and Evening travel times, respectively.

Travel Times between Bellevue Activity Centers and Bellevue Neighborhoods

Travel times by transit are longer, in general, between Bellevue Activity Centers other than downtown and Bellevue neighborhoods than they are between the regional centers in this report. Travel time increases when it is necessary to wait, transfer multiple times, or walk to an origin or destination. Figures 4, 5, 8 and 9 show travel times from each Bellevue Activity Center to other activity centers and neighborhoods.

The difference in transit /auto ratios between regional and local trips suggests that indirect routing, transfer delays due to infrequent service, and congestion on local streets, cause local transit routes to be less competitive with auto travel than regional routes. Several regional trips from the Bellevue Transit Center are competitive with auto travel time, especially during the PM peak when congestion increases auto travel times. In contrast, regional trips at midday from areas with less service have exceedingly high travel times when compared to auto travel times, suggesting that transit travel times are increased by out of direction travel to the Bellevue Transit Center for transfer purposes, and transfer waiting time due to infrequent service in off peak periods. Direct routing, frequent service, improved transfer options, and street-level speed enhancements for transit would all contribute to making transit a viable competitor to the automobile.

“Other than going to school, the bus routes require too many transfers and the time required to travel is prohibitive.”

*Max, Commute to School Transit User
Resident of Bellevue*

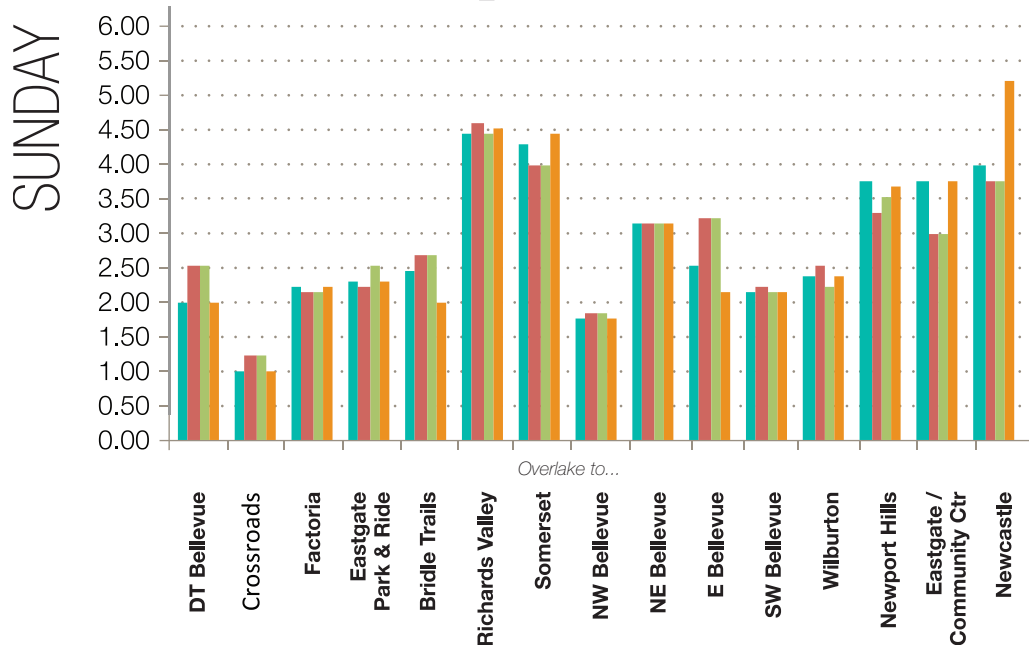

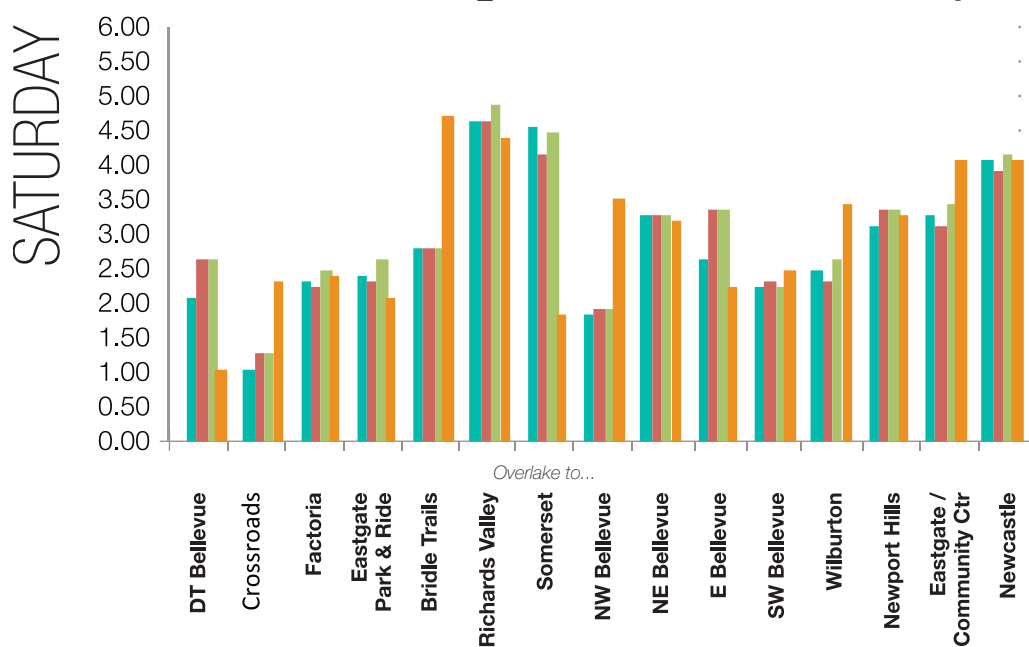

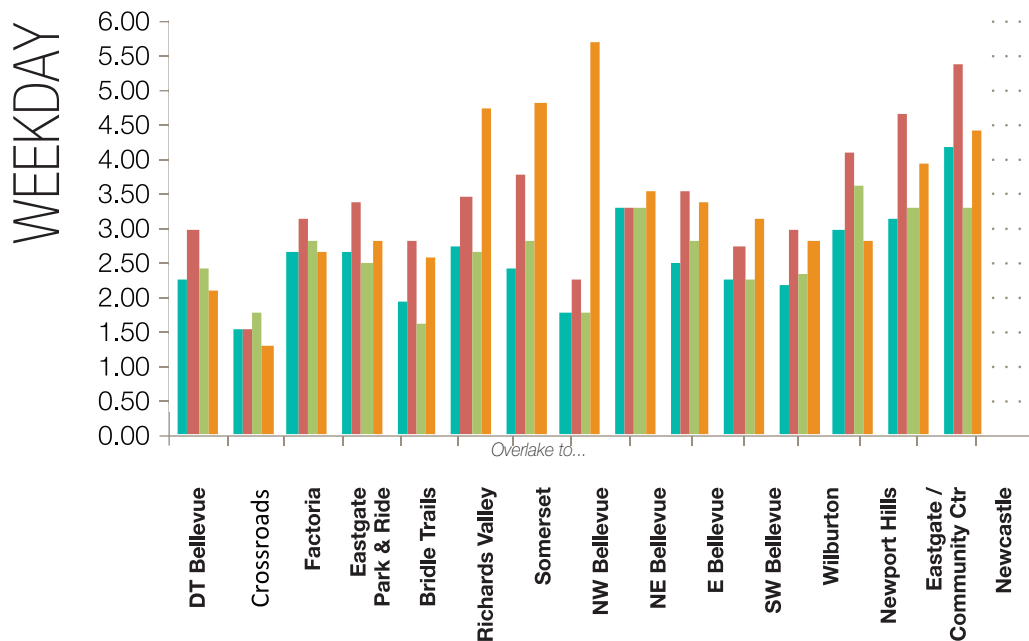

Figure 5 Comparison of Transit / Auto Ratios between Overlake and destination within Bellevue for weekday, Saturday, and Sunday travel time.

AM PM
MID EV

Based on an analysis of transit / auto travel time ratios (TA Ratios) taken during the weekday, Saturday, and Sunday at multiple times of day, the following conclusions can be made regarding the competitiveness of transit between the Bellevue Activity Centers of Crossroads, Overlake, Factoria, and Eastgate and the eleven Bellevue neighborhoods:

- Many routes serving Bellevue neighborhoods end weekday service just before 8 pm and do not provide service on the weekends making it necessary for transit users to walk up to a mile or more to reach an alternative route.
- In general, trips between Bellevue Activity Centers and Richards Valley, Somerset, Newcastle, Northwest Bellevue, Newport Hills, and Eastgate are not very competitive by transit.

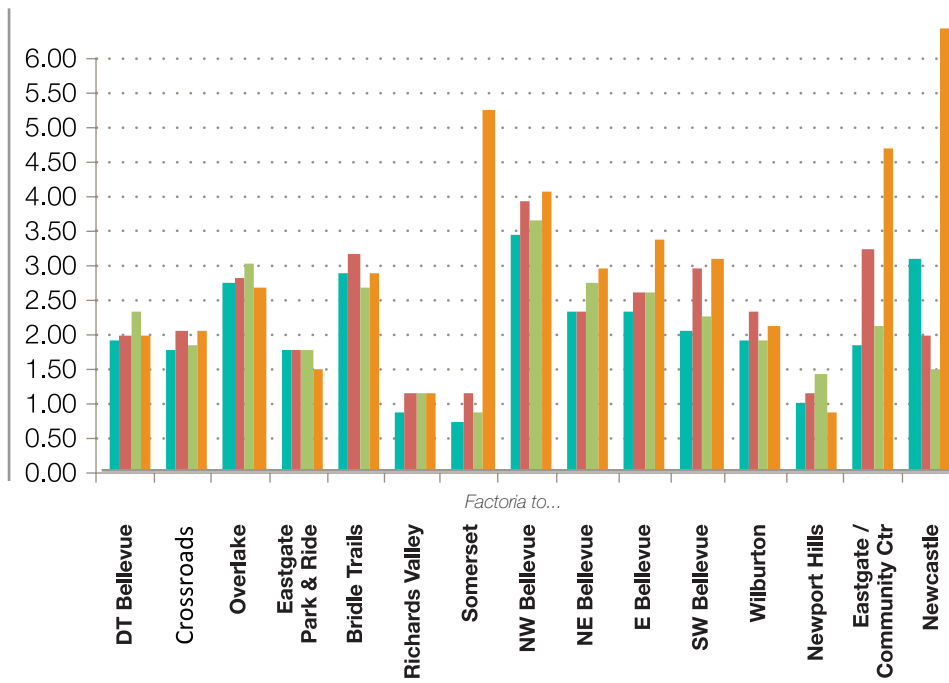

Times when transit is least competitive:

- The Richards Valley and Somerset neighborhoods rely on Metro Route 246 as their only transit connection. Figure 7 on the next page shows this route in green, meaning the route is efficient when available. However, route 246 runs from 5:14 am to 7:23 pm weekdays, but not on weekends. Therefore, it takes much longer for trips originating at 8 pm weekdays or over the weekend because transit users must walk a mile to catch neighboring routes such as Metro Routes 271, 240, or 245.
- Connections to the Newcastle neighborhood require a one-mile walk at most times of the week except for during the am and pm peak weekday time periods when Metro Routes 210 or 823 (3pm

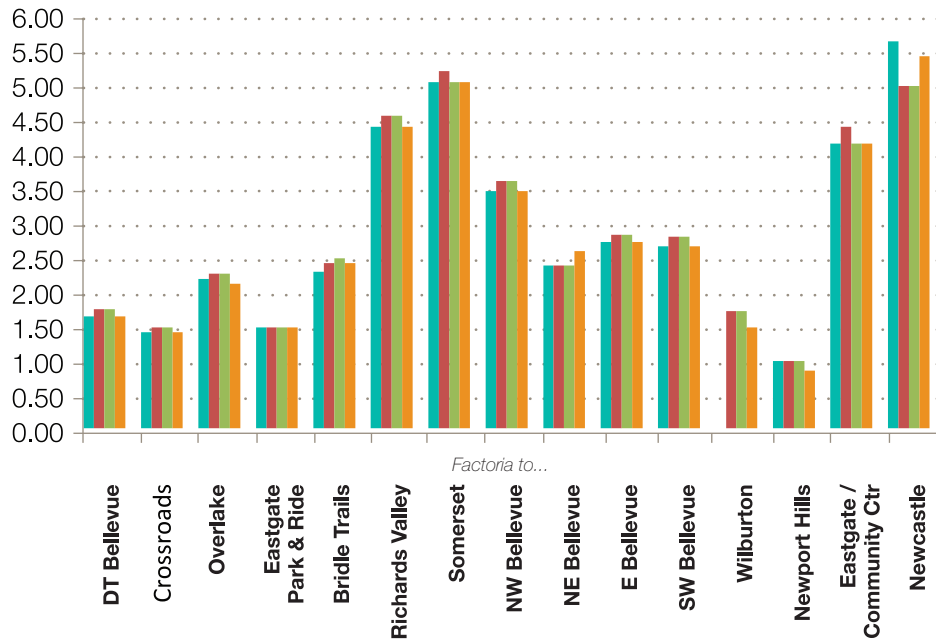

“If I miss a bus in Seattle due to a class / meeting finishing late, I can expect another one in about 10 minutes. In Bellevue, I have to wait for 30 minutes (1 hour on weekends).”

*Alexandra, All-Around Transit User
Resident of Bellevue*

WEEKDAY

afternoon peak) are available, as shown by the red dashed line in Figure 7. A 27 minute walk (1 mile) to SE Newport Way and 163rd Avenue allows for a connection to Metro Route 271. During the weekday, a 27 minute walk (1.2 miles) to 148th Ave SE and SE 45th Place provides a connection

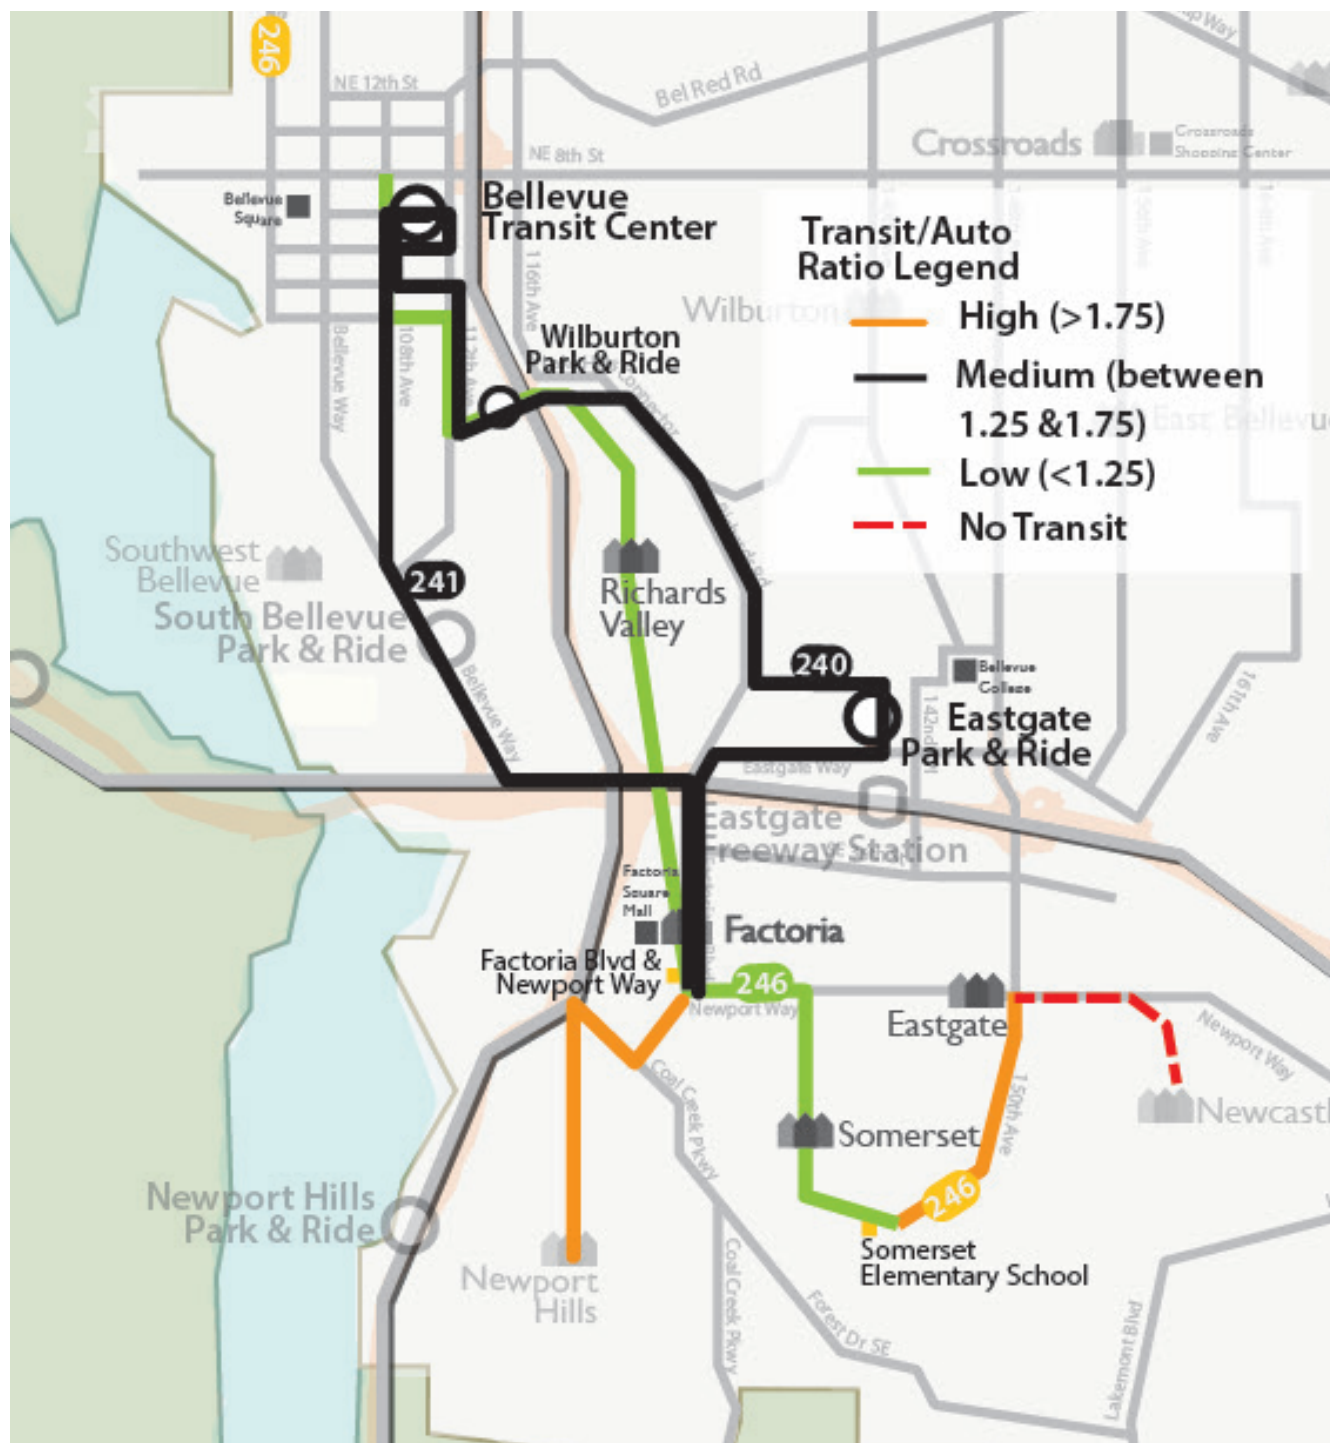

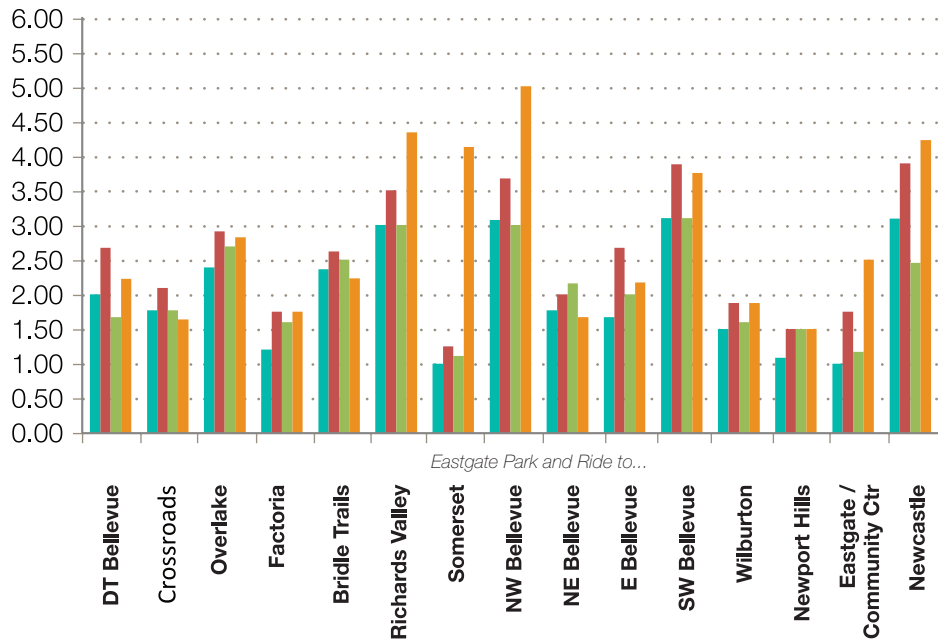

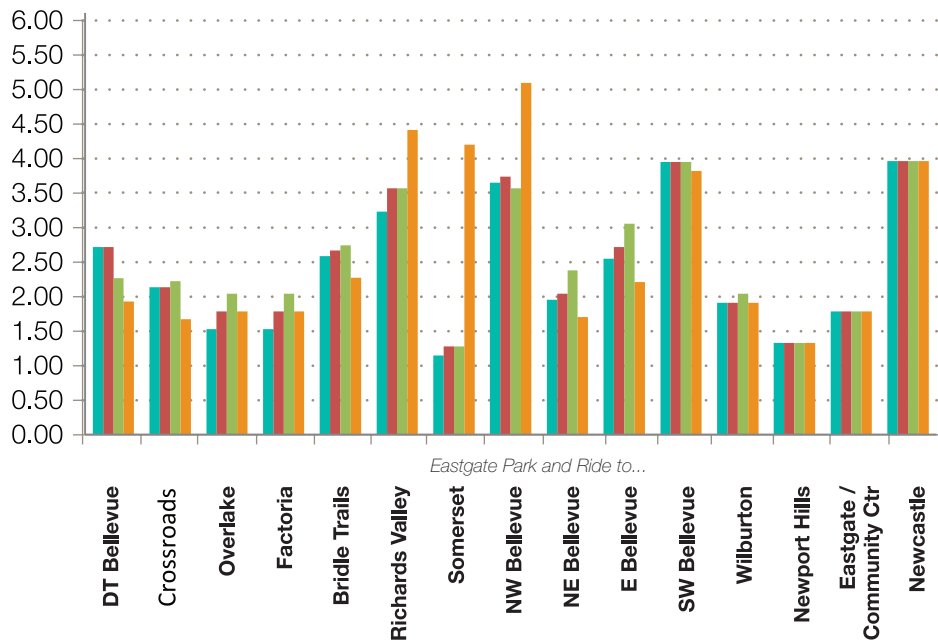

Figure 7 Route map showing the relative difference in transit / auto ratios from Bellevue Transit Center to south Bellevue destinations.

WEEKDAY

SATURDAY

SUNDAY

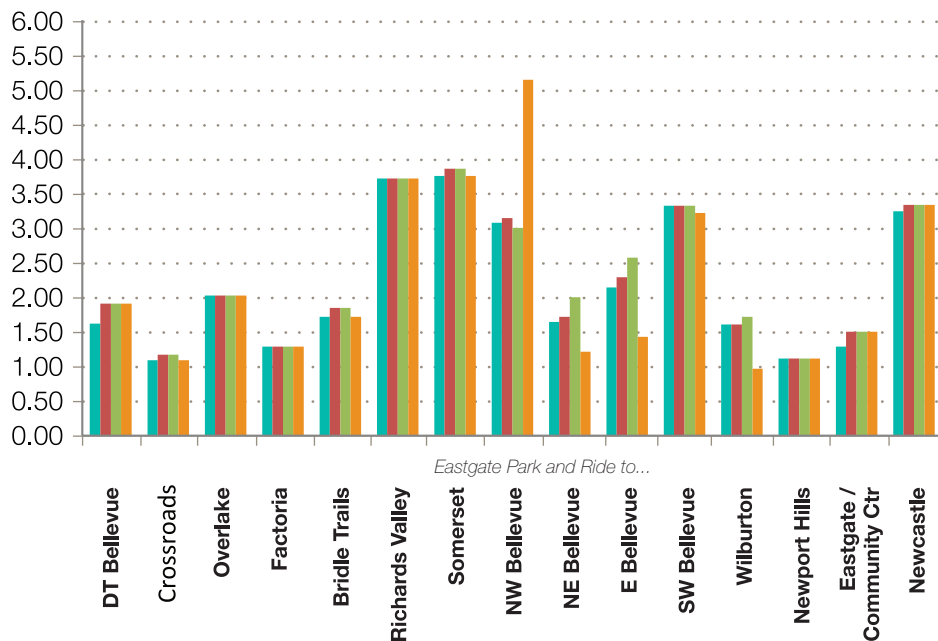

Figure 8 Comparison of Transit / Auto Ratios between Eastgate Park and Ride and destination within Bellevue for weekday, Saturday, and Sunday travel time.

AM PM
MID EV

to Metro Route 246. Due to this distant availability of multiple access routes, the Newcastle neighborhood appears to have the most fluctuating high travel time ratios in comparison to other locations (both weekday and weekend services). Transit service is least competitive during off-peak hours, especially after 8 pm. It takes up to 8 times as long to travel from Factoria to Newcastle by bus than driving. The off-peak night time commute also requires more transfers.

- Northwest Bellevue is well served by route 249 from the Bellevue Transit Center weekdays until 8:18 pm and weekends until 8:40 pm. After this time there are no transit options to reach Northwest Bellevue, often requiring a 30 minute walking trip from the Bellevue Transit Center.
- While T/A ratios between Newport Hills and Factoria and Eastgate Park and Ride are competitive, it is much more difficult to reach Crossroads and Overlake from Newport Hills. At mid-day, it takes 54 minutes, with a T/A ratio of 3.60, to travel by transit from Crossroads to Newport Hills.
- Southwest Bellevue is well served by route 249 during the day, but after 7:40 pm during the weekday and after 8:30 pm weekends, the route is unavailable making it necessary to walk to reach a route.
- The Eastgate neighborhood is well served by route 246 and also route 271. However, transit users must make several transfers during night-time commute. Even with the Metro RapidRide B, the commute time is still less efficient than driving.

“Transit is faster during rush hour; no need to look for parking in Seattle.”

*Theodora, Shopping and Commute to Special Events Transit User
Resident of Bellevue*

“I can't see taking an hour to stress about switching buses. If I could get a direct bus route at convenient times for me, I would take the bus for sure.”

*Penny, Non-Rider
Resident of Renton*

Times when transit is most competitive:

- Travel between Eastgate Park and Ride and Somerset is efficient, except during the evening (MR 246, 9 – 10 min., TA Ratio 1.0 to 1.25).
- Travel by transit at all times between destinations served by Metro Route 245 is competitive as compared to travel by the automobile. Metro Route 245 is a frequent service, all day route which serves the four Activity Centers of Overlake, Crossroads, Eastgate and Factoria. Service is provided from 6 am to midnight weekdays and from 7 am to midnight weekends. Buses arrive every 15 minutes on weekdays during peak morning and evening hours, and every 30 minutes at other times, including weekends.
- Travel by transit at all times weekday and weekends is competitive between the Bellevue Transit Center, Overlake, and Crossroads, using the Metro RapidRide B-Line.
- A 13 minute walk to NE 8th Street connects this study's inquiry point for the Wilburton Neighborhood to the Metro RapidRide B-Line.
- Transit (Metro Route 246) and auto travel time between the Eastgate Park & Ride and South Bellevue Community Center are equal during the weekday AM peak, both taking six minutes. Transit (Metro Route 241) takes 11 minutes and is faster than driving by one minute between the Bellevue Transit Center and the Factoria Square Mall during the weekday AM peak.
- Travel between the Factoria Square Mall and multiple locations have low Transit/Auto Ratios. For example, Newport Hills can be reached in seven minutes, the

same travel time by car, on Metro Route 240.

- Travel times by transit are longer, in general, between Bellevue Activity Centers other than downtown and Bellevue neighborhoods. Travel time increases when it is necessary to wait, transfer multiple times, or walk to an origin or destination. Figure 25 shows Transit/Auto Ratios for weekday, Saturday and Sunday travel from Bellevue Crossroads Activity Center to multiple destinations within Bellevue. The lowest Transit/Auto Ratios occur at destinations served by frequent, direct service. These include Wilburton, Downtown Bellevue and Overlake.
- For most destinations, trips during non-peak service (1pm and 8pm) have a higher Transit/Auto Ratio than trips during peak service. For example, it takes almost five times as long to ride the bus during the evening on weekends (59 minutes) as it does to drive (13 minutes) from Crossroads to Richards Valley (Metro Route 245).

Transit is faster than or equal to travel by car in the following instances:

Regional Trips:

- Along the I-405 corridor, it can be faster to travel by transit than by auto during the weekday PM peak time period when congestion levels are high. For example, weekday PM peak trips between the Bellevue Transit Center and Renton Transit Center (on ST Express Route 566) have a Transit/Auto Ratio of 0.94. PM Peak trips to the Bothell Park & Ride to the north (on ST Express Route 535) have a Transit/Auto Ratio of 0.89.

“Make bus routes more accessible during the late evening. Most Bellevue bus routes end at around 10 PM or 11 PM. [This] makes it difficult for people to get to social gatherings in the late evening. Also, some people have graveyard shifts.”

*Juan, Non-Commute Transit User
Resident of Bellevue*

- Also during the PM peak congested travel time, transit trips along the I-90 corridor between Eastgate Park & Ride and Issaquah Transit Center (on ST Express Route 555 / 556) take the same time as travel by auto.

Local Trips:

- Transit (Metro Route 246) and auto travel time between the Eastgate Park & Ride and South Bellevue Community Center are equal during the weekday AM peak, both taking six minutes. Transit (Metro Route 241) takes 11 minutes and is faster than driving by one minute between the Bellevue Transit Center and the Factoria Square Mall during the weekday AM peak period.
- Travel between the Factoria Square Mall and multiple locations have low Transit/Auto Ratios. For example, Newport Hills can be reached in seven minutes, the same travel time by car, on Metro Route 240.
- Travel times by transit are longer, in general, between Bellevue Activity Centers other than downtown and Bellevue neighborhoods. Travel time increases when it is necessary to wait, transfer multiple times, or walk to an origin or destination. Figure 25 shows Transit/Auto Ratios for weekday, Saturday and Sunday travel from Bellevue Crossroads Activity Center to multiple destinations within Bellevue. The lowest Transit/Auto Ratios occur at destinations served by frequent, direct service. These include Wilburton, Downtown Bellevue and Overlake.

- For most destinations, trips during non-peak service (1pm and 8pm) have a higher Transit/Auto Ratio than trips during peak service. For example, it takes almost five times as long to ride the bus during the evening on weekends (59 minutes) as it does to drive (13 minutes) from Crossroads to Richards Valley (Metro Route 245).

Limitations of this study

There are inherent challenges to gathering data of this nature. First, auto travel time is influenced by congestion. The Auto Trip Planner Tool in Google Maps provides congested auto time at the time of inquiry. Much of the congested travel time was measured only one time for each data set during a one-hour window surrounding each time period on three consecutive days in September, 2012. Because it was difficult to schedule enough data entry for these time periods, some of the congested travel times for weekday trips was generalized using the theory that PM congestion is higher than AM congestion. It is unclear the degree to which this congested travel time is generalizable due to the variable nature of congestion travel time. Another challenge to this study was that data was collected during the months of February 2012 and December 2012 by multiple investigators. During this time, King County implemented service revisions in February, June, and September of 2012. Some effort was

“I need to get to work by 5:00 AM and no buses run early enough for me to get to work on time.”

*Myra, Former Transit Rider
Resident of Bellevue*

made between November 2012 and January 2013 to update the data, but the update was not able to be comprehensive due to time constraints.

This travel time analysis does not consider frequency of service. There are times when a bus is not available at the time of inquiry, but the travel time for bus is provided starting when it arrives.

Conclusion

The Transit/Auto travel time analysis provides a number of insights. The difference in transit /auto ratios between regional and local trips suggests that indirect routing, transfer delays due to infrequent service, and congestion on local streets, causes local transit routes to be less competitive with auto travel than regional routes. Several regional trips from the Bellevue Transit Center are competitive with auto travel time, especially during the PM peak when congestion increases auto travel times. In contrast, regional trips at midday from areas with less service have exceedingly high travel times when compared to auto travel times, suggesting that transit travel times are increased by out of direction travel to the Bellevue Transit Center for transfer purposes, and transfer waiting time due to infrequent service in off peak periods. Direct routing, frequent service, improved transfer options, and street-level speed enhancements for transit would all contribute to making transit a viable competitor to the automobile.
